A Scientist in Wonderland Edzard Ernst 2015-01-28 This is the story of the author's life as a doctor and a scientist. Despite a youthful ambition to become a jazz musician, he studied medicine and eventually became a medical research scientist, taking up appointments in Germany, Austria and finally in England. His reverence for the pursuit of truth through the application of scientific methods, coupled with a growing interest in the history of medicine during the Nazi era, did not always endear him to others. At the time he was appointed to the world's first chair in alternative medicine, this was an area of health care that had rarely been studied systematically, and was almost entirely dominated by outspokenly evangelic promoters and enthusiasts - among them, famously, HRH Prince Charles - many of whom exhibited an overtly hostile, anti-scientific attitude towards the objective study of their favoured therapies. Clashes were inevitable, but the sheer ferocity with which advocates of alternative medicine would operate in order to protect their field from scrutiny came as a profound surprise. This memoir provides a unique insight into the cutthroat politics of academic life and offers a sobering reflection on the damage already done by pseudoscience in health care.

Testing Treatments Imogen Evans 2011 This work provides a thought-provoking account of how medical treatments can be tested with unbiased or 'fair' trials and explains how patients can work with doctors to achieve this vital goal. It spans the gamut of therapy from mastectomy to thalidomide and explores a vast range of case studies.

Trick or Treatment? Dr. Simon Singh 2009-10-06 Welcome to the world of alternative medicine. Prince Charles is a staunch defender and millions of people swear by it; most UK doctors consider it to be little more than

superstition and a waste of money. But how do you know which treatments really heal and which are potentially harmful? Now at last you can find out, thanks to the formidable partnership of Professor Edzard Ernst and Simon Singh. Edzard Ernst is the world's first professor of complementary medicine, based at Exeter University, where he has spent over a decade analysing meticulously the evidence for and against alternative therapies. He is supported in his findings by Simon Singh, the well-known and highly respected science writer of several international bestsellers. Together they have written the definitive book on the subject. It is honest, impartial but hard-hitting, and provides a thorough examination and judgement of more than thirty of the most popular treatments, such as acupuncture, homeopathy, aromatherapy, reflexology, chiropractic and herbal medicine. In *Trick or Treatment?* the ultimate verdict on alternative medicine is delivered for the first time with clarity, scientific rigour and absolute authority.

A Short History of Medicine Erwin H. Ackerknecht 2016-05-01 A bestselling history of medicine, enriched with a new foreword, concluding essay, and bibliographic essay. Erwin H. Ackerknecht's *A Short History of Medicine* is a concise narrative, long appreciated by students in the history of medicine, medical students, historians, and medical professionals as well as all those seeking to understand the history of medicine. Covering the broad sweep of discoveries from parasitic worms to bacilli and x-rays, and highlighting physicians and scientists from Hippocrates and Galen to Pasteur, Koch, and Roentgen, Ackerknecht narrates Western and Eastern civilization's work at identifying and curing disease. He follows these discoveries from the library to the bedside, hospital, and laboratory, illuminating how basic biological sciences interacted with clinical practice over time. But his story is more than one of laudable scientific and therapeutic achievement. Ackerknecht also points toward the social, ecological, economic, and political conditions that shape the incidence of disease. Improvements in health, Ackerknecht argues, depend on more than laboratory knowledge: they also require that we improve the lives of ordinary men and women by altering social conditions such as poverty and hunger. This revised and expanded edition includes a new foreword and concluding biographical essay by Charles E. Rosenberg, Ackerknecht's former student and a distinguished historian of medicine. A new bibliographic essay by Lisa Haushofer explores recent scholarship in the history of medicine.

Riches of the Forest Citlalli López Binnqüist 2004-01-01

Frontiers of Development Economics Gerald M. Meier 2001 With contributions from 35 leading economists, this forward-looking book explores the future of development economics against the background of the past half-century of development thought and practice. Outstanding representatives of the past two generations of development economists assess development thinking at the turn of the century and look to the unsettled questions confronting the next generation. The volume offers a thorough analysis of the broad range of issues involved in development economics, and it is especially timely in its critique of what is needed in development theory and policy to reduce poverty. An overriding issue is whether in the future 'development economics' is to be regarded simply as applied economics or whether the nature and scope of development economics will constitute a need for a special development theory to supplement general economic theory. 'Frontiers of Development Economics' is an ideal reference for all those working in the international development community.

Development with Identity Robert E. Rhoades 2006 Throughout Latin America, indigenous peoples are demanding that development must address local priorities, including ethnic identity. Simultaneously, sustainability scientists need to conduct place-based research on the interaction between environment and society that will have global relevance. This book reports on a 6 year interdisciplinary research project on natural resource management in Cotacachi, Ecuador, where scientists and indigenous groups learnt to seek common ground. The book discusses how local people and the environment have engaged each other over time to create contemporary Andean landscapes. It also explores human-environment interaction in relation to biodiversity, soils and water, and equitable development. This book will be of significant interest to sociologists, anthropologists, economists and sustainability scientists researching environment and agriculture in rural communities.

Road Traffic Injury Prevention Training Manual Dinesh Mohan 2006 Road traffic collisions kill about 1.2 million people around the world every year but they are largely neglected as a health and development issue, perhaps because they are still viewed by many as being beyond human control. Efforts to prevent road traffic injuries are hampered by a lack of human capacity. Policy-makers, researchers and practitioners need information on effective prevention measure and on how to develop, implement and evaluate such interventions. There is a need to train more specialists in road traffic injury prevention in order to address the growing problem of road traffic injuries at international levels.

Daniel Goleman Omnibus **Daniel Goleman** 2004 Emotional Intelligence Does IQ define our destiny? Daniel Goleman argues that our view of human intelligence is far too narrow, and that our emotions play a major role in thought, decision making and individual success. Self-awareness, impulse control, persistence, motivation, empathy and social deftness are all qualities that mark people who excel: whose relationships flourish, who are stars in the workplace. With new insights into the brain architecture underlying emotion and rationality, Goleman shows precisely how emotional intelligence can be nurtured and strengthened in all of us. Working with Emotional Intelligence Do you want to be more successful at work? Do you want to improve your chances of promotion? Do you want to get on better with your colleagues? Daniel Goleman draws on unparalleled access to business leaders around the world and the thorough research that is his trademark. He demonstrates that emotional intelligence at work matters twice as much as cognitive abilities such as IQ or technical expertise in this inspiring sequel.
