Understanding Building Failures James Douglas 2013-04-12 Building defects still continue to plague the construction industry. The lessons learned over the last forty years have not been fully applied. Many new or refurbished buildings still leak or crack. Lack of awareness by designers and installers as to the main mechanisms that trigger such failures remains a problem for the industry. Investigating and rectifying building failures form a major part of building surveyors' bread and butter work. This book provides guidance on this work for typical residential, commercial and industrial buildings - with advice on how to diagnose a wide range of defects with an emphasis on evidence based practice throughout. It considers both modern and older construction methods, together with new and traditional materials. The particular problems of alteration and renovation work

are also discussed. The first four chapters provide information and guidance on the methodology for investigating failures – how to prepare for and conduct an investigation into a building defect and subsequently diagnose its cause in a logical manner. This fourth edition has been updated and expanded to cover the latest diagnostic procedures and research. It also includes Appendices and a new Bibliography, and provides an extensive list of books on building pathology and related topics in the UK and North America. It is essential reading for all students and practitioners interested in building surveying and building conservation.

Flood Hazards Jessica Lamond 2011-07-28 A 360-degree view of the response to flood risk As major flooding events around the world show, the impact of flooding on the built environment can cause widespread chaos. These flood events form part of a wider pattern of increasing flood frequency coupled with increased vulnerability of the built environment to flood hazard. Flood risk can unite or divide communities and the responses to potential risk can range from denial to perfect adaptation. Drawing on the experience of communities and experts, *Flood Hazards: Impacts and Responses for the Built Environment* offers guidance on managing urban flooding and flood risk. It brings together a diversity of viewpoints and experiences on flood impacts and responses from leading academics, flood restoration specialists, emergency responders, architects, planning consultants, insurers, policymakers, and community representatives. By including the perspective of the community and the views of households and businesses at risk, this volume makes a unique contribution to the literature on flood management. The chapter organization loosely corresponds to the phases of the disaster management cycle, covering emergency preparation and response; recovery, repair, and reconstruction; and mitigation and adaptation. Contributors examine the types of impacts and discuss forecasting and emergency warning. They describe processes and good practice in recovery of flood-damaged property from the perspectives of the insurance industry, restorers, and loss adjusters. The book also deals with business continuity, land-use planning, property-level and infrastructure protection, and urban drainage, looking at the regulation and design of the built environment as one way to reduce risk. A section on community response to flooding sheds light on the experiences of flood-affected families. Written for students, practitioners, and researchers in flood risk management, as well as for professionals who may encounter flood-related issues in the course of their work, this cross-disciplinary book makes a valuable contribution towards designing a future built environment that is more resilient to flood risk.

Shaping Places David Adams 2013 *Shaping Places* explains how towns and cities can turn real estate development to their advantage to create the kind of places where people want to live, work, relax and invest. It contends that the production of quality places which enhance economic prosperity, social cohesion and environmental sustainability require a transformation of market outcomes. The core of the book explores why this is essential, and how it can be delivered, by linking a clear vision for the future with the necessary means to achieve it. Crucially, the book argues that public authorities should seek to shape, regulate and stimulate real estate development so that developers, landowners and funders see real benefit in creating better places. Key to this is seeing planners as market actors, whose potential to shape the built environment depends on their capacity to understand and transform the embedded attitudes and practices of other market actors. This requires planners to be skilled in understanding the political economy of real estate development and successful in changing its outcomes through smart intervention. Drawing on a strong theoretical framework, the book reveals how the future of places will come to be shaped through constant interaction between State and market power. Filled with international examples, essential case studies, color diagrams and photographs, this is essential reading for undergraduate and graduate students taking planning, property, real estate or urban design courses as well as for social science students more widely who wish to know how the shaping of place really occurs.
