La tecnica paesaggistica Pier Luigi Paolillo 2013-10-01 Perversa è stata, finora, l'incidenza urbanistica sulla dimensione del paesaggio: il piano ha quasi sempre generato perdita d'identità storica, scarsa pregnanza linguistica, nessuna organicità spaziale, in buona sostanza una forsennata corsa al nulla che ha trasformato città e campagne nel regno dell'indifferenza omologata, senza capire né accettare né tanto meno adoperarsi affinché il paesaggio si confermasse come linfa di coscienza e di cultura, di riconoscibilità e d'appartenenza, di crescita e di ricchezza, e senza consapevolezza del fatto che, quanto più l'abbiamo sevizato, tanto più ci siamo allontanati da noi stessi e dalla nostra storia; ma, adesso, è d'obbligo stimare i valori paesaggistici nel piano comunale individuando i margini di trasformabilità ammissibili e i corrispondenti modi d'intervento, in risposta al Codice dei beni culturali e del paesaggio che pretende - per ogni ambito omogeneo individuato, «da quelli di elevato pregio paesaggistico fino a quelli significativamente compromessi o degradati» - specifici obiettivi di qualità corrispondenti ai valori constatati; è questa un'ottica evoluta rispetto alla precedente (e fortemente inapplicata) consuetudine dei vincoli apodittici, del contenimento passivo, delle negazioni immotivate, avviando in tal modo un'urbanistica che giustifichi la conservazione, riqualificazione, rigenerazione urbana e ambientale attraverso la piena conoscenza dei paesaggi, utilizzando in termini ottimali i Geographical Information Systems, ricomponendo i rapporti fra progetto e contesto in continuità e aderenza con le forme strutturali del paesaggio, coi caratteri morfologici degli intorni, con le loro condizioni percettive. Pier Luigi Paolillo, ordinario di urbanistica e direttore del corso di perfezionamento in sistemi informativi e governo integrato del territorio nel Politecnico di Milano, è autore di molteplici strumenti a differenti scale tra cui la Variante generale del Piano intercomunale savonese, gli Indirizzi per le zone agro - forestali del Piano territoriale della Regione autonoma Friuli - Venezia Giulia, il Piano territoriale d'inquadramento della Regione Marche, il prototipo di Programma ecologico ambientale della Regione Lombardia, il progetto di Sportello Unico consortile per le attività produttive del Consorzio Area Alto Milanese, il Rapporto ambientale della Vas del Ptc del Parco lombardo della Valle del Lambro; ha curato per l'Enea il capitolo «Suolo» della IV edizione della Relazione al Parlamento sullo stato dell'ambiente; ha fatto parte del comitato scientifico di Arpa Lombardia per la Relazione sullo stato dell'ambiente lombardo; nell'ultimo periodo s'è occupato del Rapporto ambientale della Vas del piano comunale di Sondrio, delle Varianti generali ai Ptc dei Parchi lombardi delle Groane e della Valle del Lambro, del Piano di governo del territorio di Como e della Variante generale del Piano di governo del territorio di Cremona; dal 1993 al 1996 ha diretto il bimestrale dell'Inu Urbanistica informazioni e, dal 1988 al 1994, è stato redattore capo di Territorio (quadrimestrale del Dipartimento di Scienze del territorio del Politecnico di Milano).

Renato Guarini Pier Luigi De Lauro 2022-03-16 Un libro per i 90 anni di Renato Guarini. Il modo migliore per festeggiare un traguardo importante. Non è una biografia ma un modo per raccontare, e per far raccontare da chi ha lavorato con lui, da chi gli è amico, il suo lungo impegno scientifico e professionale prima all'Istat e poi nella sua amata università, La Sapienza, dove è stato a lungo preside della facoltà di Scienze statistiche e ha ricoperto il più alto incarico di rettore, concludendo con una sua dichiarazione d'amore per Napoli, la sua città. Una coinvolgente narrazione "tra sapere e organizzazione del sapere".

*Finance, Investment and Innovation* Michele Bagella 2018-03-22 This book provides a critical evaluation of the literature on finance, investment and innovation and proposes new research methods for evaluating the comparative performance of financial systems in supporting innovation. The comparative advantage of this book is that of being directly focused on one of the main unsolved issues in monetary and financial economics: the relative effectiveness of national financial systems in supporting innovation. It proposes various theoretical and empirical contributions that, taken together, allow to evaluate the relative effectiveness of some of the most important country systems such as Japan, and the UK and Italy.

**Economics of Innovation: The Case of Food Industry** Giovanni Galizzi 2012-12-06 Giovanni Galizzi and Luciano Venturini The food industry has been characterized by several and profound changes in its structure and competitive environment in the last decades. Although it is not a research-oriented industry, there is no arguing that technological change and particularly product innovations are crucial determinants of firms' performance and in recent years food manufacturers have accelerated the consumers' welfare. development of new products, by using new ingredients, processing and packaging techniques. Thus, food markets are increasingly characterized by competitive environments where relevant flows of innovative products, quality improvements and new technologies provide new consumption trends, food habits, market opportunities and firms' strategies. However, the issue of product innovation in the food industries has been rather neglected by economists. Few works have explicitly addressed this issue. After the pioneering book of Buzzell and Nourse (1967), one can count few contributors. Connor (1981) examined the empirical determinants of new food products introductions. Padberg and Westgren (1979) provided crucial insights about the nature of food innovation through their notions of consumer inertia, technological redundancy and incremental product innovation. Some case-studies provide useful empirical materials, but they are generally sparse.

*A History of Italian Economic Thought* Riccardo Faucci 2014-04-03 This book provides the non-Italian scholar with an extensive picture of the development of Italian economics, from the Sixteenth century to the present. The thread of the narrative is the dialectics between economic theory and political action, where the former attempts to enlighten the latter, but at the same time receives from politics the main stimulus to enlarge its field of reflection. This is particularly clear during the Enlightenment. Inside, this book insists on stressing that Galiani, Verri, and Beccaria were economists quite sensitive to practical issues, but who also were willing to attain generally valid conclusions. In this sense, "pure economics" was never performed in Italy. Even Pareto used economics (and sociology) in order to interpret and possibly steer the course of political action. Within this book it illustrates the Restoration period (1815-48). There was a slowdown of the economists' engagement, due to an adverse political situation, that prompted the economists to prefer less dangerous subjects, such as the relationship between economics, morals, and law (the main interpreter of this attitude was Romagnosi). After 1848, however, in parallel with the Risorgimento cultural climate, a new vision of the economists' task was eventually manifested. Between economics and political Liberalism a sort of alliance was established, whose prophet was F. Ferrara. While the Historical school of economics of German origin played a minor role, Pure Economics (1890-1940 approx.) had a considerable success, as regards both economic equilibrium and the theory of public finance. Consequently, the introduction of Keynes's ideas was rather troubled. Instead, Hayek had an immediate success. This book concludes with a chapter devoted to the intense relationships between economic theories, economic programmes and political action after 1945. Here, the Sraffa debate played an important role in stimulating Italian economists to a reflection on the patterns of Italian economy and the possibilities of transforming Italy's economic and social structure.

**Total Science** Jean-Guy Prévost 2009-09-12 In *A Total Science*, Jean-Guy Prévost charts how Italian statistics emerged as a full-fledged discipline, giving rise to a network of university chairs, journals, and other institutions. He focuses on episodes such as the creation of the famous Gini coefficient and the statisticians' participation in Italy's war effort and also analyses the intellectual project to which most statisticians were committed, that of creating a quantitative social science. In doing so he reveals the political and ideological use of the work of statisticians during the Fascist era.
