Handbook of Blended Shore Education Gabriele Strohschen 2008-11-07 As we confront the future of our professional endeavors, we tend to rely with confidence on longstanding and widely honored assumptions about the world and ourselves. We believe we have accumulated sturdy structures of knowledge, effective practices, and sound values. Yet, we rely on these resources with scant consciousness that in the long run our assumptions, practices, and values may not only be inimical to the viability of our profession, but as well, oppressive in their effects on others. There is at least one assumption – common across many professions and cultures – that is of particular significance. It is the assumption that the world is made up of discrete entities or units. There are not only the species of plants and animals, for example, but there is me as opposed to you, us vs. them, my business enterprise in competition with yours, our nation or religion and yours. And with this assumption of separable units, we assemble ways of sustaining and protecting those units of which we feel a part. We erect buildings, laws, schools, governments, and armies to ensure that what is inside the boundary will flourish, and what is outside cannot threaten us. In effect, the assumption of a world of independent entities establishes the way in which we understand and conduct ourselves within relationships.

E-Learning in the Workplace Minhong Wang 2017-09-18 This book analyzes the nature and requirements of workplace e-learning based on relevant theories such as adult learning, community of practice, organizational learning, and the systems thinking. By integrating considerations on organization, pedagogy and technology, a performance-oriented e-learning framework is then presented, where performance measurement is used to: 1) clarify and link organizational goals and individual learning needs, 2) direct learning towards work performance; and 3) support social communication and knowledge sharing and management in the workplace. E-learning and related emerging technologies have been increasingly used by organizations to enhance the skills and performance of knowledge workers. However, most of the efforts tend to focus on the technology, ignoring the organizational context and relevant pedagogies of workplace learning. Many e-learning projects in the workplace settings fail to connect learning with work performance and align organizational goals and individual needs in a systemic way. Moreover, there is insufficient effort on externalizing and transferring tacit knowledge embedded in practices and expertise, based on which to maintain and expand knowledge assets for sustainable development. The book presents a systemic theoretical framework, design principles, and implementation methods, together with a case study to demonstrate the use and effectiveness of the performance-oriented approach to workplace e-learning, in which organizational, social and individual perspectives are integrated in a systemic way. The performance-oriented approach to workplace e-learning enables self-regulated and socially constructed learning activities to be clearly motivated and driven towards the goal of performance improvement, and makes learning at the organizational, social and individual levels integrated in a systemic way. The effects of individual and social learning support and organizational learning environment on employees' motivation to use performance-oriented e-learning are also investigated.

The ASTD E-learning Handbook Allison Rossett 2002 The entire training industry is undergoing dramatic change, as training is moved out of traditional classrooms and onto the Web. Training publications and conferences are now dominated by speakers, writers, and vendors talking about e-Learning. The e-Learning revolution is forcing companies to spend millions on new technology and new web-based courseware, threatening the role of traditional classroom trainers, and saving companies millions of dollars in housing and travel costs because trainees no longer need a plane ticket and 3 nights' accommodation to attend a corporate training program - the training can be delivered to each learner's desktop over the Web. But because e-Learning is still in the revolution stage, there are no clear standards and models for how to create and deliver e-Learning successfully. Everyone is asking the same questions: how does web-based training fit in with traditional classroom based training? What are the standards for designing high-quality e-Learning? How much interaction with an instructor do e-Learning participants need? What is the role of the instructional designer in online learning? The ASTD e-Learning Yearbook will be the first annual refe

Issues in Web-Based Pedagogy Robert A. Cole 2000-06-30 There has been an explosion of Web-based courses in higher education. Aiming at an interdisciplinary audience, the contributors draw upon diverse philosophical and empirical backgrounds to make claims about Web-based pedagogy. Among the points they raise is the concern that education is more easily commodified through Internet technologies, implying that traditional faculty roles in teaching (and research) are at risk. Moreover, current understandings of what it means to be a teacher or a student are undergoing redefinition as a result of these new distance-learning technologies. The contributors note that Web-based pedagogy is associated with sound instruction when particular strategies are adopted. As a corollary, this form of teaching is least effective when attempts are made to directly translate traditional styles of teaching. Political, social, and economic interests are competing to shape the direction that online education will take. The authors argue that opportunities exist for administrators and faculty to define the terms under which Web-based learning will occur in their institutions.
