Techniques in Epilepsy Surgery André Olivier 2012-02-09 Techniques in Epilepsy Surgery presents the operative procedures used in the treatment of intractable epilepsy in a practical, clinically relevant manner. Founded by pioneering neurosurgeon Wilder Penfield, the Montreal Neurological Institute (MNI) is a leading global centre of epilepsy surgery and this volume reflects the Institute's approach, combining traditional techniques with modern neuronavigation-based approaches. There is an emphasis on mastering the important trilogy of topographic, vascular and functional anatomy of the brain. The basic anatomical and physiological mechanisms underlying epilepsy are presented in a practical manner, along with the clinical seizure evaluation that leads to a surgical hypothesis. The consultation skills and investigations necessary for appropriate patient selection are discussed, as well as pitfalls and the avoidance of complications. This is an invaluable resource not only for neurosurgeons, neurosurgical residents and fellows in epilepsy surgery, but also for neurologists, and others who provide medical care for patients with intractable epilepsy.

EEG Signal Analysis and Classification Siuly Siuly 2017-01-03 This book presents advanced methodologies in two areas related to electroencephalogram (EEG) signals: detection of epileptic seizures and identification of mental states in brain computer interface (BCI) systems. The proposed methods enable the extraction of this vital information from EEG signals in order to accurately detect abnormalities revealed by the EEG. New methods will relieve the time-consuming and error-prone practices that are currently in use. Common signal processing methodologies include wavelet transformation and Fourier transformation, but these methods are not capable of managing the size of EEG data. Addressing the issue, this book examines new EEG signal analysis approaches with a combination of statistical techniques (e.g. random sampling, optimum allocation) and machine learning methods. The developed methods provide better results than the existing methods. The book also offers applications of the developed methodologies that have been tested on several real-time benchmark databases. This book concludes with thoughts on the future of the field and anticipated research challenges. It gives new direction to the field of analysis and classification of EEG signals through these more efficient methodologies. Researchers and experts will benefit from its suggested improvements to the current computer-aided based diagnostic systems for the precise analysis and management of EEG signals. /div

Epilepsy David W. McCandless 2011-11-02 The present volume is intended to be a synopsis of seizure disorders with a goal of describing key studies in animals and humans. The translation of pertinent findings from animal studies to human studies, and to potential human studies will be emphasized. Specific cogent animal studies/results which deserve exploration in human seizure disorders will be detailed. The current rate of translation is estimated to be from 7-9 years, and the "success" rate of translation was very recently listed as less than one half. The success rate is defined as results in human studies which were predicted in advance by animal studies. Both the time between animal and human attempts plus the success rate need improvement.

Atlas of EEG in Critical Care Lawrence Hirsch 2011-08-17 As the population ages, technology improves, intensive care medicine expands and neurocritical care advances, the use of EEG monitoring in the critically ill is becoming increasingly important. This atlas is a comprehensive yet accessible introduction to the uses of EEG monitoring in the critical care setting. It includes basic EEG patterns seen in encephalopathy, both specific and non-specific, nonconvulsive seizures, periodic EEG patterns, and controversial patterns on the ictal-interictal continuum. Confusing artefacts, including ones that mimic seizures, are shown and explained, and the new standardized nomenclature for these patterns is included. The Atlas of EEG in Critical Care explains the principles of technique and interpretation of recordings and discusses the techniques of data management, and 'trending' central to long-term monitoring. It demonstrates applications in multi-modal monitoring, correlating with new techniques such as microdialysis, and features superb illustrations of commonly observed neurologic events, including seizures, hemorrhagic stroke and ischaemia. This atlas is written for practitioners, fellows and residents in critical care medicine, neurology, epilepsy and clinical neurophysiology, and is essential reading for anyone getting involved in EEG monitoring in the intensive care unit.

Long-Term Outcomes of Epilepsy Surgery in Adults and Children Kristina Malmgren 2015-05-25 This book provides a comprehensive, rigorous review of the long-term outcome literature in epilepsy surgery in both adults and children. Long-Term Outcomes of Epilepsy Surgery in Adults and Children is essential reading for all members of multidisciplinary epilepsy surgery teams, including neurosurgeons, neurologists and neuropsychologists; it will enable these teams to counsel patients and parents who are considering epilepsy surgery as a therapeutic option.

Handbook of Medical Neuropsychology Carol L. Armstrong 2010-08-09 This handbook celebrates the abundantly productive interaction of neuropsychology and medicine. This interaction can be found in both clinical settings and research laboratories, often between research teams and clinical practitioners. It accounts for the rapidity with which awareness and understanding of the neuropsychological components of many common medical disorders have recently advanced. The introduction of neuropsychology into practice and research involving conditions without obvious neurological components follows older and eminently successful models of integrated care and treatment of the classical brain disorders. In the last 50 years, with the growing understanding of neurological disorders, neuropsychologists and medical specialists in clinics, at bedside, and in laboratories together have contributed to important clinical and scientific advances in the understanding of the common pathological conditions of the brain: stroke, trauma, epilepsy, certain movement disorders, tumor, toxic conditions (mostly alcohol-related), and degenerative brain diseases. It is not surprising that these seven pathological conditions were the first to receive attention from neuropsychologists as their behavioral symptoms can be both prominent and debilitating, often with serious social and economic consequences.

Benign Focal Epilepsies N. Fejerman 2007

Brain Mapping Hugues Duffau 2011-11-13 The goal of this book is to make a link between fundamental research in the field of cognitive neurosciences, which now benefits from a better knowledge of the neural foundations of cerebral processing, and its clinical application, especially in neurosurgery - itself able to provide new insights into brain organization. The anatomical bases are presented, advances and limitations of the different methods of functional cerebral mapping are discussed, updated models of sensorimotor, visuospatial, language, memory, emotional, and executive functions are explained in detail. In the light of these data, new strategies of surgical management of cerebral lesions are proposed, with an optimization of the benefit-risk ratio of surgery. Finally, perspectives about brain connectivity and plasticity are discussed on the basis of translational studies involving serial functional neuroimaging, intraoperative cortico-subcortical electrical mapping, and biomathematical modeling of interactions between parallel distributed neural networks.

Seizures Humberto Foyaca Sibat 2018-05-02 This book contains selected peer-reviewed articles that cover novel information on epileptic seizure and psychogenic non-epileptic seizures written by international researchers. In this book, we discuss self-reporting technologies for supporting epilepsy treatment. We also discuss about the diagnostic testing in epilepsy genetic clinical practice. Clinical aspects related to diagnosis in patients presenting psychogenic non-epileptic seizures vs. epileptic seizures and neurocysticercosis are discussed as well. We delivered novel aspects about the treatment for pseudoseizures. In another chapter, the authors estimated the prevalence of ischemic stroke in epileptic patients presenting subarachnoid neurocysticercosis and ischemic stroke frequency among HIV-positive patients, and finally other authors discuss autoimmune epilepsy, its new development, and its future directions. We are looking forward with confidence and pride to the remarkable role that this book will play for a new vision and mission.
