The Man Who Bent Light Narin Singh Kapany 2022-03-14 The father of fiber optics, Narinder Singh Kapany was far more than your typical multi-hyphenate. Inventor, art collector, sculptor, farmer, entrepreneur, teacher, and a successful businessman, Dr Kapany was what Fortune magazine in its 1999 issue called, 'one of the seven unsung heroes of the 20th century'. An insightful and inspirational life story, this memoir chronicles his 90 remarkable years. Charming, idiosyncratic, and highly engaging, The Man who Bent Light serves up enough variety and verve to celebrate the lives of a half-dozen individuals. But there is only one Narinder Singh Kapany, and his life, illuminated in his singular memoir, is a life like no other.

Administrative reforms for India VIJAYA KRUSHNA VARMA 2020-06-29 Administrative reforms are long overdue in India as the present administrative system is obsolete and continuing as a legacy from British Raj. It is not coping with the ever-changing needs and aspirations of the ever-growing population of the country. Administrative set-up should be redesigned to work more efficiently and to bring transparency, accountability, efficacy and high-speed response into governance to meet the aspirations of the people before their anger turns into revolt against the elected governments. Zero corruption government should be the bedrock of an advanced democracy. We need to restructure and reboot the present administrative format into a more responsive entity to give quality services and equal opportunities to all citizens, instantly on demand at a single platform. These administrative reforms are aimed at removing corruption, arrogance and lethargy at all levels and in all forms

**Applied Mechanics for Engineers (Classic Reprint)** J. Duncan 2015-08-04 Excerpt from Applied Mechanics for Engineers The author's object in writing this book has been to provide a practical statement of the principles of Mechanics. The arrangement adopted is similar to that of his Applied Mechanics for Beginners. Great pains have been taken to make the treatment adequate; principles have been illustrated by numerous fully worked-out examples, and exercises for home or class work have been provided at the ends of the chapters. The working out of typical exercises must be done by every student of Mechanics, but the mere ability to solve examination questions is not the only service the study of Applied Mechanics can render the Engineer. The problems met with in actual engineering practice often differ greatly from the text-book form of exercise, and the student of Mechanics, in addition to a sound knowledge of principles, must learn to appreciate the assumptions involved and the consequent limitations which

arise in their practical applications. Consequently, the student must be provided with frequent opportunities for performing suitable experiments under workshop conditions. In the mechanical laboratory he must come into touch with practical problems, and there learn to test and apply his knowledge of principles, and in this work he should have the assistance of a teacher and the criticism of fellow-students. But if the whole value of such laboratory work is to be secured, no slipshod working out of results must be tolerated. In recognition of the supreme importance of the experience gained in the laboratory, many suitable experiments have been described, and these have been arranged on p.xi to provide a connected course of practical work. The nature and scope of the apparatus available in different laboratories vary greatly, and some of the experiments included are given as suggestions only, so as to be applicable to any form of machine or instrument. Students using the book must have a knowledge of Algebra up to quadratic equations, and of Trigonometry to the simple properties of triangles.
