Bronze and Sunflower Cao Wenxuan 2017-03-14 A beautifully written, timeless tale by Cao Wenxuan, best-selling Chinese author and 2016 recipient of the prestigious Hans Christian Andersen Award. Sunflower is an only child, and when her father is sent to the rural Cadre School, she has to go with him. Her father is an established artist from the city and finds his new life of physical labor and endless meetings exhausting. Sunflower is lonely and longs to play with the local children in the village across the river. When her father tragically drowns, Sunflower is taken in by the poorest family in the village, a family with a son named Bronze. Until Sunflower joins his family, Bronze was an only child, too, and hasn't spoken a word since he was traumatized by a terrible fire. Bronze and Sunflower become inseparable, understanding each other as only the closest friends can. Translated from Mandarin, the story meanders gracefully through the challenges that face the family, creating a timeless story of the trials of poverty and the power of love and loyalty to overcome hardship.

The Cellular and Circuit Mechanisms of Hyperkinetic Movement Disorders Allison Elizabeth Girasole 2019 The basal ganglia are a series of interconnected subcortical nuclei involved in movement, action selection, and decision making. These processes are dependent on the coordinated output of the striatal direct and indirect pathways, which is dysregulated in neurological conditions such as Parkinson's disease, Huntington's Disease, and forms of dystonia. However, the specific cells, circuits, and patterns of activity within the brain that contribute to disease manifestations, such as involuntary movements, or dyskinesias, are not well understood. To address this gap, we have used two mouse models of human dyskinesias, paroxysmal nonkinesigenic dyskinesia (PNKD) and levodopa-induced dyskinesia (LID), to investigate whether aberrant striatal activity is a root cause of dyskinesia. Using a variety of in vivo and ex vivo techniques to both record and manipulate neural activity, we found that abnormal patterns of activity in the striatum give rise to dyskinesia. Interestingly, in PNKD we see profound reductions in striatal indirect pathway activity during dyskinesia, whereas in LID there are decreases in indirect pathway activity, but also abnormally high direct pathway activity during dyskinesia. Further, we found that the decrease in indirect pathway activity is necessary and sufficient for drug-induced dyskinesia in PNKD, while an increase in activity in a subset of direct pathway neurons is necessary and sufficient for drug-induced dyskinesia in LID. In both models, we found evidence of aberrant striatal synaptic plasticity as a cellular correlate of dyskinesia: depressed excitatory input onto indirect pathway neurons in the case of PNKD, and enhanced excitatory input onto direct pathway neurons in LID. While these results are largely in support of the classical model of basal ganglia function, we also found heterogeneity within the canonical direct pathway in LID, and identified a subclass of direct pathway neurons with exceptionally high levodopa-evoked firing that correlates strongly with dyskinesia. Importantly, these results may guide the development of new therapeutics for hyperkinetic disorders based on targeting specific subclasses of striatal neurons or their connections.

Lipid Metabolism Rodrigo Valenzuela Baez 2013-01-23 Lipids (fats and oils) are a wide range of organic molecules that serve several functions in organisms. Lipids are essential components of our diet, highlighting their important contribution in energy, representing 9 kcal/g (or 37.7 kJ/g), and by some components relevant to the metabolism, such as essential fatty acids, fat soluble vitamins and sterols (cholesterol and phytosterols). Besides this, lipids have key roles in human growth and development, along with promoting, preventing and/or participating in the origin or eventually in the treatment of various diseases. This book presents a systematic and comprehensive review about the structure and metabolism of lipids, particularly highlighting the importance of these molecules in the body and considering the interest of some lipids in health and disease.

The Architecture of Rome Ulrich Fürst 1998 Architects and artists have always acknowledged over the centuries that Rome is rightly called the 'eternal city'. Rome is eternal above all because it was always young, always 'in its prime'. Here the buildings that defined the West appeared over more than 2000 years, here the history of European architecture was written. The foundations were laid even in ancient Roman times, when the first attempts were made to design interiors and thus make space open to experience as something physical. And at that time the Roman architects also started to develop building types that are still valid today, thus creating the cornerstone of later Western architecture. In it Rome's primacy remained unbroken -- whether it was with old St Peter's as the first medieval basilica or new St. Peter's as the building in which Bramante and Michelangelo developed the High Renaissance, or with works by Bernini and Borromini whose rich and lucid spatial forms were to shape Baroque as far as Vienna, Bohemia and Lower Franconia, and also with Modern buildings, of which there are many unexpected pearls to be found in Rome. All this is comprehensible only if it is presented historically, i. e. in chronological sequence, and so the guide has not been arranged topographically as usual but chronologically. This means that one is not led in random sequence from a Baroque building to an ancient or a modern one, but the historical development is followed successively. Every epoch is preceded by an introduction that identifies its key features. This produces a continuous, lavishly illustrated history of the architecture of Rome -- and thus at the same time of the whole of the West. Practical handling is guaranteed by an alphabetical index and detailed maps, whose information does not just immediately illustrate the historical picture, but also makes it possible to choose a personal route through history.

Revolving Architecture Chad Randl 2008-05-15 Alternately lauded as the future of architecture or dismissed as pure folly, revolving buildings are a fascinating missing chapter in architectural history with surprising relevance to issues in contemporary architectural design. Rotating structures have been employed to solve problems and create effects that stationary buildings can't achieve. Rotating buildings offered ever-changing vistas and made interior spaces more flexible and adaptable. They were used to impress visitors, treat patients, and improve the green qualities of a structure by keeping particular rooms in or out of the sun. The follow-up to his critically acclaimed book *A-frame*, Chad Randl's *Revolving Architecture: A History of Buildings that Rotate, Swivel, and Pivot* explores the history of this unique building type, investigating the cultural forces that have driven people to design and inhabit them. *Revolving Architecture* is packed with a variety of fantastic revolving structures such as a jail that kept inmates under a warden's constant surveillance, glamorous revolving restaurants, tuberculosis treatment wards, houses, theaters, and even a contemporary residential building whose full-floor apartments circle independently of each other. International examples from the late 1800s though the present demonstrate the variety and innovation of these dynamic structures.

A Selection of Modern Italian Poetry in Translation Roberta L. Payne 2004 What was Italian poetry like in the years of extraordinary historical, intellectual, aesthetic, and spiritual change between the 1860s and the Unification of Italy in the 1960s? In *A Selection of Modern Italian Poetry in Translation* Roberta Payne provides a bilingual collection of ninety-two poems by thirty-five Italian poets, including works of classicism and passionate decadentism, examples of crepuscularism, and poetry by Ungaretti, Montale, and Quasimodo. Payne pays particular attention to poets of the fifties and sixties, futurists, and female poets. She notes that the futurists, who have rarely been translated, were particularly important as they were truly original, attempting to develop new notions of word, line, sound, and phrase. Such new notions make translating them particularly challenging. She also offers a large sampling from poets of the fifties and sixties, many of whom have won the Viareggio Prize. Poems by women in this volume reflect diverse schools and directions while maintaining a distinctly female voice. Containing the original Italian and the translation side-by-side, this volume offers a wonderful introduction to Italian poetry to scholars and general readers alike.

The Politics of Electoral Systems Michael Gallagher 2005-09-15 Electoral systems matter. They are a crucial link in the chain connecting the preferences of citizens to the policy choices made by governments. They are chosen by political actors and, once in existence, have political consequences for those actors. They are an important object of study for anyone interested in the political process, and in this book we subject them to systematic analysis. In addition to some comparative chapters, the book contains full accounts of the operation of electoral systems in 22 countries: France, the UK, Germany, Italy, Israel, Spain, Austria, Belgium, Denmark, Finland, The Netherlands, Ireland, Hungary, Russia, Australia, Canada, India, the USA, Japan, New Zealand, Chile, and South Africa. The book provides detailed analyses of the operation of a diverse set of electoral systems in their national context. Each chapter explains how the electoral system really works in the given country, examining the strategic incentives the system provides to voters, candidates, and parties. All country chapters have a common format and structure. Successive sections analyse: the institutional context; how each electoral system was chosen historically; how the current electoral system operates (the rules, mechanics, and ballot structure); and the political consequences of the current system (the impact on the party system, the internal life of parties, and the impact on parliament and government formation). Each country chapter then contains a final section which focuses on the politicization of electoral institutions. In recent years many countries have changed their electoral systems, either entirely or in part so there is a strong focus on the processes of electoral reform, both historically and prospectively. The book concentrates on the real world 'politics', as well as the 'political science' of electoral systems. The book will be of interest to those concerned with the practical political business of electoral reform. The book contains a wealth of evidence about the performance of various kinds of proportional representation and of non-PR systems. This will be invaluable for anyone interested in the question: 'What would be the best electoral system for my country?'

Girasole : Une Maison Près de Vérone Marcel Meili 2010 On the slope of a gentle hill on the northern boundary of the Po basin in Northern Italy stands a remarkable house. A modernist villa in the middle of a park, with its metallic facade shining above an enormous circular base of reddish stone. The extraordinary structure of the Casa Girasole (The Sunflower) follows the way of the sun across the sky - and the inhabitants' vista over the surrounding landscape - during the day, driven by an electric motor that can turn the entire house by 360 . It was built in the early 1930s by the Italian architects Angelo Invernizzi and Ettore Fagioli and is an important example of Italian Futurismo in architecture. Preserved entirely in its original state, including the original furniture and curtains, it makes traceable the fascination for modern technology, but also the already slightly broken optimism, of that period. The documentary film 'I Girasole: A House Near Verona' by Christoph Schaub and Marcel Meili enables the viewer to take part in a day at the house that turns around its vertical axis once. The movie introduces both the architecture and atmosphere of the building, its various rooms, furnishings and decoration. It gives a memoir of the house's history and of the time and feeling of life in which it was conceived. The film was awarded the 1st prize at the 1995 biennale Film and Architecture in Graz (Austria). The DVD is complemented by a booklet with introductory essays and illustrations.

What about the two black limousines and nine potted plants? It all culminates in the final gatefold spread, which reveals a tremendous traffic jam with every car from the previous spreads! Children will spend hours poring over this book as they search for their favorite vehicles and reoccurring characters on every page. They'll also find mini-stories within the main story (will the giraffe bike messenger find his lost wallet?), and several hidden items on every page. Numbers and colors are clearly indicated on each spread, and although certainly busy, each spread is carefully designed to provide just the right amount of challenge to young children.
