Automated Taxon Identification in Systematics Norman MacLeod 2007-07-23 The automated identification of biological objects or groups has been a dream among taxonomists and systematists for centuries. However, progress in designing and implementing practical systems for fully automated taxon identification has been frustratingly slow. Regardless, the dream has never died. Recent developments in computer architectures and innovations in software design have placed the tools needed to realize this vision in the hands of the systematics community, not several years hence, but now. And not just for DNA barcodes or other molecular data, but for digital images of organisms, digital sounds, digitized chemical data - essentially any type of digital data. Based on evidence accumulated over the last decade and written by applied researchers, *Automated Taxon Identification in Systematics* explores contemporary applications of quantitative approaches to the problem of taxon recognition. The book begins by reviewing the current state of systematics and placing automated taxon identification in the context of contemporary trends, needs, and opportunities. The chapters present and evaluate different aspects of current automated system designs. They then provide descriptions of case studies in which different theoretical and practical aspects of the overall group-identification problem are identified, analyzed, and discussed. A recurring theme through the chapters is the relationship between taxonomic identification, automated group identification, and morphometrics. This collection provides a bridge between these communities and between them and the wider world of applied taxonomy. The only book-length treatment that explores automated group identification in systematic context, this text also includes introductions to basic aspects of the fields of contemporary artificial intelligence and mathematical group recognition for the entire biological community.

The Reptiles of South Carolina Jeffrey D. Camper 2019-05-07 From the lowcountry coastal tidelands to the upstate Blue Ridge Mountains and everywhere in between, South Carolina's varied landscapes and habitats are home to a fascinating and mysterious assortment of alligators, turtles, lizards, and snakes. *The Reptiles of South Carolina*, a comprehensive, illustrated guide to the Palmetto State, includes seventy-five native species of reptiles as well as introduced forms. Jeffrey D. Camper's accessible descriptions and intriguing details are designed to enlighten readers about this misunderstood and often-maligned group of secretive and ecologically important animals. Camper begins with a discussion of the state's mild climate and wide variety of natural habitats, including forests, plains, sandhills, wetlands, and barrier islands. The entry for each species provides a color picture, detailed descriptions of external appearance, variations in size and color, taxonomic keys, comparisons to similar species to aid in identification, and natural history. Camper also assesses the conservation status of each species and offers a detailed range map of where that species is known to occur in the state and another map showing its entire geographic range in the continental United

States. *The Reptiles of South Carolina* includes 92 color and 79 black-and-white illustrations, a checklist by reptile family, a helpful glossary, and a short history of herpetology in the Palmetto State. This authoritative reference will prove invaluable to students, professional herpetologists, conservationists, ecologists, biologists, land managers, and amateur naturalists alike. A foreword is provided by J. Whitfield Gibbons, professor emeritus of ecology at the University of Georgia and former head of the environmental outreach and education program at the Savannah River Ecology Laboratory.

Designed to bring you the most up-to-date research and expertise, this manual draws on the knowledge of dozens of experts within the University of California, public agencies, and private practice.

Quantitative Conservation of Vertebrates Michael J. Conroy 2011-09-20 This book provides a hands-on introduction to the construction and application of models to studies of vertebrate distribution, abundance, and habitat. The book is aimed at field biologists, conservation planners, and advanced undergraduate and postgraduate students who are involved with planning and analyzing conservation studies, and applying the results to conservation decisions. The book also acts as a bridge to more advanced and mathematically challenging coverage in the wider literature. Part I provides a basic background in population and community modeling. It introduces statistical models, and familiarizes the reader with important concepts in the design of monitoring and research programs. These programs provide the essential data that guide conservation decision making. Part II covers the principal methods used to estimate abundance, occupancy, demographic parameters, and community parameters, including occupancy sampling, sample counts, distance sampling, and capture-mark-recapture (for both closed and open populations). Emphasis is placed on practical aspects of designing and implementing field studies, and the proper analysis of data. Part III introduces structured decision making and adaptive management, in which predictive models are used to inform conservation decision makers on appropriate decisions in the face of uncertainty—with the goal of reducing uncertainty through monitoring and research. A detailed case study is used to illustrate each of these themes. Numerous worked examples and accompanying electronic material (on a website - <http://www.blackwellpublishing.com/conroy> - and accompanying CD) provide the details of model construction and application, and data analysis.

Pesticide Safety: A Reference Manual for Private Applicators - 3rd Edition Shannah M. Whithaus 2021-10-01 This manual covers information essential for anyone using pesticides on California farms, including growers, managers and employees in an easy-to-use format; now with color photographs and illustrations. Read this book carefully to prepare for the Private Aapplicator Certification test. DPR uses this test to certify farm owners, leaseholders, and managers who may have to purchase restricted materials, as well as farm employees who supervise pesticide handlers or will be training handlers and fieldworkers to work safely around pesticides. A list of knowledge expectations (descriptions of what you should know after reading the chapter) are given at the beginning of each chapter to guide you as you study. Individual knowledge expectations appear alongside relevant content throughout each chapter, which will help you focus on the information that is most likely to appear on the examination. Covers pesticide labels, worker safety (handlers and fieldworkers), how to mix and apply pesticides, calibration, the hazards of pesticide use including heat related illness, and pesticide emergencies. Presents an overview of integrated management principles An appendix includes sample training forms for pesticide handlers and fieldworkers.
