

# The Two Cultures Controversy Science Literature And Cultural Politics In Postwar Britain

The "two Cultures" Controversy Guy Samuel Ortolano 2005 This dissertation presents a cultural history of the "two cultures" debate in postwar Britain. At the dawn of the 1960s, the scientist-turned-novelist C. P. Snow clashed with the literary critic F. R. Leavis over the relative merits of science and literature, and the ensuing controversy propelled the "two cultures" to its current status as a touchstone in discussions of the sciences and the humanities. Yet it is not clear how an issue that had been discussed since the Victorians ignited such ferocious controversy in the mid-twentieth century. This dissertation argues that the familiar public dispute was actually animated by political rivalries. It therefore takes a new approach to the episode, using it as a lens through which to explore tensions between advocates and critics of modern civilization--tensions previously obscured by language of the "two cultures," but which are shown to have animated seemingly disparate disputes over the mission of the university, the methodology of social history, and the meaning of national "decline." By excavating the political dimensions of the "two cultures," then, this dissertation explores the stakes of post-war cultural politics more generally, while recasting the meaning of a term that continues to be invoked to interpret British and American culture to this day.

England and the Aeroplane David Edgerton 2013-04-04 The story of the strange mixture of romanticism, militarism and technology that has made planes so important to England, from the brilliant author of Britain's War Machine The history of England and the aeroplane is one tangled with myths - of 'the Few' and the Blitz, of boffins, flying machines, amateur inventors and muddling through. In England and the Aeroplane David Edgerton reverses received wisdom, showing that the aeroplane is a central and revealing aspect of an unfamiliar English nation: a warfare state dedicated to technology, industry, empire and military power. England had the strongest air force in the Great War, the largest industry in the world in the 1920s, outproduced Germany by 50% at the time of the Battle of Britain and was the third largest producers of aeroplanes well after this time. In a revelatory recounting of the story of aeronautical England, from its politics to its industry and culture, David Edgerton reconfigures some of the most important chapters of our history. Reviews: 'A brilliant polemic' Guardian 'Full of good stories ... an illuminating read' Spectator 'A tour de force, after which the history of the aircraft industry will never be quite the same again' Business History 'David Edgerton's sure-footed essay ... sees Britain from an unusual perspective ... His arguments provide sound backing for the idea that modern Britain is as much a warfare state as a welfare one' Economist About the author: David Edgerton is Hans Rausing Professor at Imperial College London, where he was the founding director of the Centre for the History of Science, Technology and Medicine. He is the author of a sequence of groundbreaking books on 20th century Britain: Science, Technology and the British Industrial 'Decline', 1870-1970; Warfare State: Britain, 1920-1970; and Britain's War Machine, published by Penguin. He is also the author of the iconoclastic and brilliant The Shock of the Old: Technology and Global History Since 1900.

**The Two Cultures** C. P. Snow 2012-03-26 The importance of science and technology and future of

education and research are just some of the subjects discussed here.

*Free Will and the Human Sciences in Britain, 1870-1910* Roger Smith 2015-10-06 Smith takes an in-depth look at the question of free will through the prism of different disciplines in the late nineteenth and early twentieth centuries.

**Film, Art, and the Third Culture** Murray Smith 2017-03-24 In the mid-1950s C.P. Snow began his campaign against the 'two cultures' - the debilitating divide, as he saw it, between traditional 'literary intellectual' culture, and the culture of the sciences, urging in its place a 'third culture' which would draw upon and integrate the resources of disciplines spanning the natural and social sciences, the arts and the humanities. Murray Smith argues that, with the ever-increasing influence of evolutionary theory and neuroscience, and the pervasive presence of digital technologies, Snow's challenge is more relevant than ever. Working out how the 'scientific' and everyday images of the world 'hang' together is no simple matter. In *Film, Art, and the Third Culture*, Smith explores this question in relation to the art, technology, and science of film in particular, and to the world of the arts and aesthetic activity more generally. In the first part of his book, Smith explores the general strategies and principles necessary to build a 'third cultural' or naturalized approach to film and art - one that roots itself in an appreciation of scientific knowledge and method. Smith then goes on to focus on the role of emotion in film and the other arts, as an extended experiment in the 'third cultural' integration of ideas on emotion spanning the arts, humanities and sciences. While acknowledging that not all of the questions we ask are scientific in nature, Smith contends that we cannot disregard the insights wrought by taking a naturalized approach to the aesthetics of film and the other arts.

[A Final Story](#) Nasser Zakariya 2017-11-14 *Towards a Final Story* is the first history of the modern

scientific epic. These epic stories pull together our knowledge of the universe, uniting material and biological origins, from beginning to end. The authors of these epics--among them Carl Sagan, E.O. Wilson, and Steven Weinberg--saw their task as providing an integrated schema that would not only bring together but also go beyond the particular scientific results and disciplines available as they wrote their histories. Nasser Zakariya traces how such epic stories could achieve what they claimed, how they inhabit culture and politics, and how they arrived at the present moment from a period in the previous century when inquiries into ultimate origins were regarded by many as unscientific and unanswerable. These prominent, popular historical narratives of science are important forms of knowledge in their own right. They expose what science means in the wider culture and at the same time focus attention on the near paradoxical nature of a universal history narrated by humanity for humanity.

**Broadcasting in the UK and US in the 1950s** Jamie Medhurst 2016-05-11 In an age of digital communications, where radio, satellite, television and computing have come together to allow instant access to information and entertainment from around the globe, it is sometimes easy to overstate the break with the recent past that these developments imply. However, from a historical perspective, it is important to recognise that the national dimensions of communications, including broadcasting, have always been framed within different sets of international political, economic, cultural, and technological relationships. Television, so easily seen as the last technology to succumb to the effects of internationalisation subsequent to the technical and political changes of the late twentieth century, was in fact, from the outset, embedded in international interactions. In recent years, a focus has been placed on the longstanding sets of transnational relationships in place in the years after World War II, when television established itself as the dominant form of mass

communication in Europe and America. Recent research has adopted a comparative approach to television history, which has examined the interactions within Europe and between Europe and America from the 1950s onwards. In addition, there has been increasing interest in the idea of television in the Anglophone world, looking at transatlantic interactions from the early phases of the development of the technology, through the growing market for formats in the 1950s and onwards, to connections with Australia and Hong Kong in these years. The essays in this collection contribute to this area by bringing together, in one volume, work which focuses on both national developments in UK and US broadcasting in the 1950s, to allow for reflection on how those systems were developing and being understood within those societies, and raise issues about the ways in which the two systems interacted and can be usefully compared. Some contributions deliberately focus on international issues, while others embed the international dimension within them, and still others offer a critical commentary on developments during the 1950s. The book will appeal primarily to students and researchers in media and communication studies, television studies, radio studies, and history, but will also be of interest to all who have an interest in developments in communication in the post-war period.

*English as a Vocation* Christopher Hilliard 2012-05-31 This book explores how a small circle of Cambridge literary critics turned into a movement that revolutionized the way English was taught and brought popular culture into classrooms. The leader, F. R. Leavis, was a well-known and controversial writer. The focus of this book is not on Leavis but on the people who put his ideas into practice.

*The Art of Appreciation* Kate Guthrie 2021-07-13 From the BBC Proms to Bernstein's Young People's Concerts, initiatives to promote classical music have been a pervasive feature of twentieth-century

musical life. The goal of these initiatives was rarely just to reach a larger and more diverse audience but to teach a particular way of listening that would help the public "appreciate" music. This book examines for the first time how and why music appreciation has had such a defining and long-lasting impact—well beyond its roots in late-Victorian liberalism. It traces the networks of music educators, philanthropists, policy makers, critics, composers, and musicians who, rather than resisting new mass media, sought to harness their pedagogic potential. The book explores how listening became embroiled in a nexus of modern problems around citizenship, leisure, and education. In so doing, it ultimately reveals how a new cultural milieu—the middlebrow—emerged at the heart of Britain's experience of modernity.

The Cambridge Companion to Literature and Science Steven Meyer 2018-05-03 In 1959, C. P. Snow lamented the presence of what he called the 'two cultures': the apparently unbridgeable chasm of understanding and knowledge between modern literature and modern science. In recent decades, scholars have worked diligently and often with great ingenuity to interrogate claims like Snow's that represent twentieth- and twenty-first-century literature and science as radically alienated from each other. The Cambridge Companion to Literature and Science offers a roadmap to developments that have contributed to the demonstration and emergence of reciprocal connections between the two domains of inquiry. Weaving together theory and empiricism, individual chapters explore major figures - Shakespeare, Bacon, Emerson, Darwin, Henry James, William James, Whitehead, Einstein, Empson, and McClintock; major genres and modes of writing - fiction, science fiction, non-fiction prose, poetry, and dramatic works; and major theories and movements - pragmatism, critical theory, science studies, cognitive science, ecocriticism, cultural studies, affect theory, digital humanities, and expanded empiricisms. This book will be a key resource for scholars, graduate students, and

undergraduate students alike.

**Science under Fire** Andrew Jewett 2020-12-08 Americans have long been suspicious of experts and elites. This new history explains why so many have believed that science has the power to corrupt American culture. Americans today are often skeptical of scientific authority. Many conservatives dismiss climate change and Darwinism as liberal fictions, arguing that “tenured radicals” have coopted the sciences and other disciplines. Some progressives, especially in the universities, worry that science’s celebration of objectivity and neutrality masks its attachment to Eurocentric and patriarchal values. As we grapple with the implications of climate change and revolutions in fields from biotechnology to robotics to computing, it is crucial to understand how scientific authority functions—and where it has run up against political and cultural barriers. *Science under Fire* reconstructs a century of battles over the cultural implications of science in the United States. Andrew Jewett reveals a persistent current of criticism which maintains that scientists have injected faulty social philosophies into the nation’s bloodstream under the cover of neutrality. This charge of corruption has taken many forms and appeared among critics with a wide range of social, political, and theological views, but common to all is the argument that an ideologically compromised science has produced an array of social ills. Jewett shows that this suspicion of science has been a major force in American politics and culture by tracking its development, varied expressions, and potent consequences since the 1920s. Looking at today’s battles over science, Jewett argues that citizens and leaders must steer a course between, on the one hand, the naïve image of science as a pristine, value-neutral form of knowledge, and, on the other, the assumption that scientists’ claims are merely ideologies masquerading as truths.

**Utopian Universities** Miles Taylor 2020-11-12 In a remarkable decade of public investment in

higher education, some 200 new university campuses were established worldwide between 1961 and 1970. This volume offers a comparative and connective global history of these institutions, illustrating how their establishment, intellectual output and pedagogical experimentation sheds light on the social and cultural topography of the long 1960s. With an impressive geographic coverage - using case studies from Europe, the Americas, Africa and Asia - the book explores how these universities have influenced academic disciplines and pioneered new types of teaching, architectural design and student experience. From educational reform in West Germany to the establishment of new institutions with progressive, interdisciplinary curricula in the Commonwealth, the illuminating case studies of this volume demonstrate how these universities shared in a common cause: the embodiment of 'utopian' ideals of living, learning and governance. At a time when the role of higher education is fiercely debated, *Utopian Universities* is a timely and considered intervention that offers a wide-ranging, historical dimension to contemporary predicaments.

**The Hatred of Literature** William Marx 2018-01-08 For 2,500 years literature has been condemned in the name of authority, truth, morality and society. But in making explicit what a society expects from literature, anti-literary discourse paradoxically asserts the validity of what it wishes to deny. The threat to literature's continued existence, William Marx writes, is not hatred but indifference.

**Milton Keynes in British Culture** Lauren Pikó 2019-01-23 The new town of Milton Keynes was designated in 1967 with a bold, flexible social vision to impose "no fixed conception of how people ought to live." Despite this progressive social vision, and its low density, flexible, green urban design, the town has been consistently represented in British media, political rhetoric and popular culture negatively. as a fundamentally sterile, paternalistic, concrete imposition on the landscape, as

a "joke", and even as "Los Angeles in Buckinghamshire". How did these meanings develop at such odds from residents' and planners' experiences? Why have these meanings proved so resilient? Milton Keynes in British Culture traces the representations of Milton Keynes in British national media, political rhetoric and popular culture in detail from 1967 to 1992, demonstrating how the town's founding principles came to be understood as symbolic of the worst excesses of a postwar state planning system which was falling from favour. Combining approaches from urban planning history, cultural history and cultural studies, political economy and heritage studies, the book maps the ways in which Milton Keynes' newness formed an existential challenge to ideals of English landscapes as receptacles of tradition and closed, fixed national identities. Far from being a marginal, "foreign" and atypical town, the book demonstrates how the changing political fortunes of state urban planned spaces were a key site of conflict around ideas of how the British state should function, how its landscapes should look, and who they should be for.

British Christianity and the Second World War Michael Snape 2023-02-21 Examines the role of Christianity in British statecraft, politics, media, the armed forces and in the education and socialization of the young during the Second World War. This volume presents a major reappraisal of the role of Christianity in Great Britain between 1939 and 1945, examining the influence of Christianity on British society, statecraft, politics, the media, the armed forces, and on the education and socialization of the young. Its chapters address themes such as the spiritual mobilization of nation and empire; the limitations of Mass Observation's commentary on wartime religious life; Catholic responses to strategic bombing; servicemen and the dilemma of killing; the development of Christian-Jewish relations, and the predicament of British military chaplains in Germany in the summer of 1945. By demonstrating the enduring -even renewed- importance of Christianity in

British national life, British Christianity and the Second World War also sets the scene for some major post-war developments. Though the war years triggered a 'resacralization' of British society and culture, inherent racism meant that the exalted self-image of Christian Britain proved sadly deceptive for post-war immigrants from the Caribbean. Wartime confidence in the prospective role of the state in religious education soon transpired to be ill-founded, while the profound upheavals of war -and even the bromides of 'BBC Religion'- were, in the longer term, corrosive of conventional religious practice and traditional denominational loyalties. This volume will be of interest to historians of British society and the Second World War, twentieth-century British religion, and the perennial interplay of religion and conflict.

*The Two Cultures Controversy* Guy Ortolano 2011-05-05 Ever since the scientist-turned-novelist C. P. Snow clashed with literary critic F. R. Leavis in the early 1960s, it has been a commonplace to lament that intellectual life is divided between 'two cultures', the arts and sciences. Yet why did a topic that had long been discussed inspire such ferocious controversy at this particular moment? This book answers that question by recasting this dispute as an ideological conflict between competing visions of Britain's past, present, and future. It then connects the controversy to simultaneous arguments about the mission of the university, the methodology of social history, the reasons for 'national decline', and the fate of the former empire. By excavating the political stakes of the 'two cultures' controversy, this book explains the workings of cultural politics during the 1960s more generally, while also revising the meaning of a term that continues to be evoked to this day.

**Untied Kingdom** Stuart Ward 2023-02-16 A panoramic history uncovering the demise of Britishness as a global civic idea since the Second World War.

Being Modern Robert Bud 2018-10-10 In the early decades of the twentieth century, engagement

with science was commonly used as an emblem of modernity. This phenomenon is now attracting increasing attention in different historical specialties. *Being Modern* builds on this recent scholarly interest to explore engagement with science across culture from the end of the nineteenth century to approximately 1940. Addressing the breadth of cultural forms in Britain and the western world from the architecture of Le Corbusier to working class British science fiction, *Being Modern* paints a rich picture. Seventeen distinguished contributors from a range of fields including the cultural study of science and technology, art and architecture, English culture and literature examine the issues involved. The book will be a valuable resource for students, and a spur to scholars to further examination of culture as an interconnected web of which science is a critical part, and to supersede such tired formulations as 'Science and culture'.

**Pursuing the Unity of Science** Harmke Kamminga 2016-05-20 From 1918 to the late 1940s, a host of influential scientists and intellectuals in Europe and North America were engaged in a number of far-reaching unity of science projects. In this period of deep social and political divisions, scientists collaborated to unify sciences across disciplinary boundaries and to set up the international scientific community as a model for global political co-operation. They strove to align scientific and social objectives through rational planning and to promote unified science as the driving force of human civilization and progress. This volume explores the unity of science movement, providing a synthetic view of its pursuits and placing it in its historical context as a scientific and political force. Through a coherent set of original case studies looking at the significance of various projects and strategies of unification, the book highlights the great variety of manifestations of this endeavour. These range from unifying nuclear physics to the evolutionary synthesis, and from the democratization of scientific planning to the utopianism of H.G. Wells's world state. At the same

time, the collection brings out the substantive links between these different pursuits, especially in the form of interconnected networks of unification and the alignment of objectives among them. Notably, it shows that opposition to fascism, using the instrument of unified science, became the most urgent common goal in the 1930s and 1940s. In addressing these issues, the book makes visible important historical developments, showing how scientists participated in, and actively helped to create, an interwar ideology of unification, and bringing to light the cultural and political significance of this enterprise.

F. R. Leavis Steven Cranfield 2015-11-09 This is a critical introduction to the educational thought of F. R. Leavis (1895–1978), the greatest English literary critic of the twentieth century, providing the first in-depth examination of Leavis’s ideas in relation to contemporary mass higher education. During the course of a long, prolific and controversial academic career, which saw him take issue with figures such as Wittgenstein, T. S. Eliot and C. P. Snow, Leavis became one of the most articulate advocates for the idea of the university as ‘a centre of consciousness and human responsibility’ in the face of what he saw as the relentless technological drive of civilisation. With the journal *Scrutiny* which he co-founded, as well as his critical writings, Leavis became a decisive influence on generations of teachers in Britain and overseas. Widely misrepresented as narrowly elitist, his ideas about ‘the creative university’, with their radical, student-centred approach to teaching, constitute a powerful resource for a higher education system grappling with the contradictory demands of continuity and change. Based on original research, the study provides an overview of Leavis’s life, work and heritage and his educational world view, and a comprehensive exploration of Leavis’s pedagogy from theoretical and practical perspectives. It also includes a first-hand account by the author of being taught by Leavis in person.

**The Afterlife of Idealism** Admir Skodo 2016-06-01 This book examines the legacy of philosophical idealism in twentieth century British historical and political thought. It demonstrates that the absolute idealism of the nineteenth century was radically transformed by R.G. Collingwood, Michael Oakeshott, and Benedetto Croce. These new idealists developed a new philosophy of history with an emphasis on the study of human agency, and historicist humanism. This study unearths the impact of the new idealism on the thought of a group of prominent revisionist historians in the welfare state period, focusing on E.H. Carr, Isaiah Berlin, G.R. Elton, Peter Laslett, and George Kitson Clark. It shows that these historians used the new idealism to restate the nature of history and to revise modern English history against the backdrop of the intellectual, social and political problems of the welfare state period, thus making new idealist revisionism a key tradition in early postwar historiography.

**Thatcher's Progress** Guy Ortolano 2019-06-27 Horizons -- Planning -- Architecture -- Community -- Consulting -- Housing.

**Quest for the Unity of Knowledge** David Lowenthal 2018-11-01 Is unity of knowledge possible? Is it desirable? Two rival visions clash. One seeks a single way of explaining everything known and knowable about ourselves and the universe. The other champions diverse modes of understanding served by disparate kinds of evidence. Contrary views pit science against the arts and humanities. Scientists generally laud and seek convergence. Artists and humanists deplore amalgamation as a threat to humane values. These opposing perspectives flamed into hostility in the 1950s "Two Cultures" clash. They culminate today in new efforts to conjoin insights into physical nature and human culture, and new fears lest such syntheses submerge what the arts and humanities most value. This book, stemming from David Lowenthal's inaugural Stockholm Archipelago Lectures,

explores the Two Cultures quarrel's underlying ideologies. Lowenthal shows how ingrained bias toward unity or diversity shapes major issues in education, religion, genetics, race relations, heritage governance, and environmental policy. Aimed at a general academic audience, *Quest for the Unity of Knowledge* especially targets those in conservation, ecology, history of ideas, museology, and heritage studies.

**Penguin Books and political change** Dean Blackburn 2020-11-12 Founded in 1935 by a young publisher disillusioned with the class prejudices of the interwar publishing trade, Penguin Books set out to make good books available to all. The 'Penguin Specials', a series of current affairs books authored by leading intellectuals and politicians, embodied its democratising mission. Published over fifty years and often selling in vast quantities, these inexpensive paperbacks helped to shape popular ideas about subjects as varied as the welfare state, homelessness, social class and environmental decay. Using the 'Specials' as a lens through which to view Britain's changing political landscape, Dean Blackburn tells a story about the ideas that shaped post-war Britain. Between the late-1930s and the mid-1980s, Blackburn argues, Britain witnessed the emergence and eclipse of a 'meritocratic moment', at the core of which was the belief that a strong relationship between merit and reward would bring about social stability and economic efficiency. Equal opportunity and professional expertise, values embodied by the egalitarian aspirations of Penguin's publishing ethos, would be the drivers of social and economic progress. But as the social and economic crises of the 1970s took root, many contemporary thinkers and politicians cast doubt on the assumptions that informed meritocratic logic. Britain's meritocratic moment had passed.

**Making Art Work** W. Patrick McCray 2020-10-20 The creative collaborations of engineers, artists, scientists, and curators over the past fifty years. Artwork as opposed to experiment? Engineer versus

artist? We often see two different cultural realms separated by impervious walls. But some fifty years ago, the borders between technology and art began to be breached. In this book, W. Patrick McCray shows how in this era, artists eagerly collaborated with engineers and scientists to explore new technologies and create visually and sonically compelling multimedia works. This art emerged from corporate laboratories, artists' studios, publishing houses, art galleries, and university campuses. Many of the biggest stars of the art world—Robert Rauschenberg, Yvonne Rainer, Andy Warhol, Carolee Schneemann, and John Cage—participated, but the technologists who contributed essential expertise and aesthetic input often went unrecognized. Coming from diverse personal backgrounds, this roster of engineers and scientists includes Frank J. Malina, the American rocket pioneer-turned-kinetic artist who launched the art-science journal *Leonardo*, and Swedish-born engineer Billy Klüver, who established the group Experiments in Art and Technology (E.A.T.). At schools ranging from MIT to Caltech, engineers engaged with such figures as artist Gyorgy Kepes and celebrity curator Maurice Tuchman. Today, we are in the midst of a new surge of corporate and academic promotion of projects and programs combining art, technology, and science. *Making Art Work* reveals how artists and technologists have continually constructed new communities in which they exercise imagination, display creative expertise, and pursue commercial innovation.

*A Mind Over Matter* Andrew Zangwill 2021-01-08 *A Mind Over Matter* is a biography of the Nobel-prize winner Philip W. Anderson, a person widely regarded as one of the most accomplished and influential physicists of the second half of the twentieth century. Anderson (1923-2020) was a theoretician who specialized in the physics of matter, including window glass and metals, magnets and semiconductors, liquid crystals and superconductors. More than any other single person, Anderson transformed the patchwork subject of solid-state physics into the deep, subtle, and

coherent discipline known today as condensed matter physics. Among his many world-class research achievements, Anderson discovered an aspect of wave physics that had been missed by all previous scientists going back to Isaac Newton. He became a public figure when he testified before Congress to oppose its funding of an expensive project intended exclusively for particle physics research. Over the years, he published many articles designed to influence a broad audience about issues where science impacted public policy and culture. Anderson grew up in the American mid-west, was educated at Harvard, and rose to the pinnacle of his profession during the first decade of his thirty-five career as a theoretical physicist at Bell Telephone Laboratories. Almost uniquely, he spent many years working half-time as a professor at the University of Cambridge and at Princeton University. The outspoken Anderson enjoyed broad influence outside of physics when he helped develop and champion the concepts of emergence and complexity as organizing principles to help attack very difficult problems in technically challenging disciplines.

*The "two Cultures" Controversy* Guy Samuel Ortolano 2005 This dissertation presents a cultural history of the "two cultures" debate in postwar Britain. At the dawn of the 1960s, the scientist-turned-novelist C. P. Snow clashed with the literary critic F. R. Leavis over the relative merits of science and literature, and the ensuing controversy propelled the "two cultures" to its current status as a touchstone in discussions of the sciences and the humanities. Yet it is not clear how an issue that had been discussed since the Victorians ignited such ferocious controversy in the mid-twentieth century. This dissertation argues that the familiar public dispute was actually animated by political rivalries. It therefore takes a new approach to the episode, using it as a lens through which to explore tensions between advocates and critics of modern civilization---tensions previously obscured by language of the "two cultures," but which are shown to have animated seemingly disparate

disputes over the mission of the university, the methodology of social history, and the meaning of national "decline." By excavating the political dimensions of the "two cultures," then, this dissertation explores the stakes of post-war cultural politics more generally, while recasting the meaning of a term that continues to be invoked to interpret British and American culture to this day. *Literary Criticism, Culture and the Subject of 'English': F.R. Leavis and T.S. Eliot* Dandan Zhang 2020-09-23 This volume considers the highly convoluted relationship between F. R. Leavis and T. S. Eliot, comparing their ideas in literary and cultural criticism, and connecting it to the broader discourse of English Studies as a university subject that developed in the first half of the twentieth century. Comparing and contrasting all the many writings of Leavis on Eliot, and the two on Lawrence, the study examines how Eliot is formative for the theory and practice of Leavis's literary criticism in both positive and negative ways, and investigates Lawrence's significance in relation to Leavis's changing attitude to Eliot. It also examines how profound differences in social, cultural, religious and national thinking strengthened Leavis's alliance with Lawrence to the detriment of his relationship with Eliot. These differences between the two writers are presented as dichotomies between nationalism and Europeanism/internationalism, ruralism/organicism and industrialism/metropolitanism, and relate to the two men's views on literary education, the subject of 'English' and the position of the Classics in the curriculum. It explores how Leavis's increasingly conflicted feelings about a figure to whom he owed an enormous critical debt and inspiration, but whose various beliefs and literary affiliations caused him much misgiving, result in a deep sense of division in Leavis himself which he sought to transfer onto Eliot as what he called a pathological 'case'.

**The Fate of Liberal Arts in Today's Schools and Colleges** William Hayes 2015-12-11 It is the

purpose of this book to examine the ever-changing meaning of the term “liberal arts” and to trace its development from antiquity to the present. In doing so, the text will compare and contrast the values of such an education with the other important objective of schools and colleges, which is to prepare students with appropriate occupational training. The book will highlight the arguments of both points of view. In doing so, attention will be paid to the contributions to society of those who have been exposed to a variety of educational curricula. As part of the study, the impact of the community college will be considered, along with the impact of recent initiatives such as the Nation at Risk Report, No Child Left Behind, Race to the Top, and the Common Core. Finally, the text will conclude with an attempt to suggest the direction that will determine the fate of liberal arts in schools and colleges.

The Cambridge History of Science: Volume 8, Modern Science in National, Transnational, and Global Context Hugh Richard Slotten 2020-04-09 This volume in the highly respected Cambridge History of Science series is devoted to exploring the history of modern science using national, transnational, and global frames of reference. Organized by topic and culture, its essays by distinguished scholars offer the most comprehensive and up-to-date nondisciplinary history of modern science currently available. Essays are grouped together in separate sections that represent larger regions: Europe, Africa, the Middle East, South Asia, East and Southeast Asia, the United States, Canada, Australia, New Zealand, Oceania, and Latin America. Each of these regional groupings ends with a separate essay reflecting on the analysis in the preceding chapters. Intended to provide a balanced and inclusive treatment of the modern world, contributors analyze the history of science not only in local, national, and regional contexts but also with respect to the circulation of knowledge, tools, methods, people, and artifacts across national borders.

*Scientific governance in Britain, 1914-79* Don Leggett 2016-08-31 *Scientific governance in Britain, 1914-79* examines the connected histories of how science was governed, and used in governance, in twentieth-century Britain. During the middle portion of that century, British science grew dramatically in scale, reach and value. These changes were due in no small part to the two world wars and their associated effects, notably post-war reconstruction and the on-going Cold War. As the century went on, there were more scientists - requiring more money to fund their research - occupying ever more niches in industry, academia, military and civil institutions. Combining the latest research on twentieth-century British science with insightful discussion of what it meant to govern - and govern with - science, this volume provides both an invaluable introduction to science in twentieth-century Britain for students and a fresh thematic focus on science and government for researchers interested in the histories of science and governance. This volume features a foreword from Sir John Beddington, UK Government Chief Scientific Adviser 2008-13.

Participant Observers Dr. Freddy Foks 2023-02-14 Social anthropology was at the forefront of debates about culture, society, and economic development in the British Empire. This book explores the discipline's rise in the interwar period, crisis amid decolonization, and ironic reemergence in the postwar metropole. Across the humanities and social sciences, activists and scholars used anthropological concepts forged in empire to rethink British society at midcentury. *Participant Observers* shows how colonial anthropology helped define the social imagination of postimperial Britain. Part institutional history of the discipline's formation, part cultural history of its impact, this is the first account of social anthropology's pivotal role in Britain's intellectual culture.

**The Two Cultures?** F. R. Leavis 2013-08-29 The first annotated edition of Leavis' famous critique of C. P. Snow, introduced by a leading twenty-first-century critic.

Undisciplining Knowledge Harvey J. Graff 2015-08 Scholars across the disciplines, specialists in higher education, administrators, and interested readers will find the book's multiple perspectives and practical advice on building and operating--and avoiding fallacies and errors--in interdisciplinary research and education invaluable.--Michael Bevis, The Ohio State University, School of Earth Sciences "The Quarterly Review of Biology"

*Closing the Door on Globalization: Internationalism, Nationalism, Culture and Science in the Nineteenth and Twentieth Centuries* Cláudia Ninhos 2017-10-05 This is a book about the tensions and entangled interactions between internationalism and nationalism, and about the effects both had on European scientific and cultural settings from the mid-nineteenth to the mid-twentieth century. From chemistry to philology the essays tackle different historical case studies exploring how the paths taken by science and culture during the period were affected by nationalism and internationalism.

The Shock of Recognition Lewis Pyenson 2020-10-12 In *The Shock of Recognition*, Lewis Pyenson examines art and science together to shed new light on common motifs in Picasso's and Einstein's education, in European material culture, and in the intellectual life of one nation-state, Argentina.

*Prosthetic Agency* Gill Plain 2023-06-30 This book addresses the legacy of World War II on male identity and reinvention. It considers some of the many ways in which popular culture of the time sought to mediate these difficult transitions, exploring films, popular fiction, memoir and biography.

**Value and the Humanities** Zoe Hope Bulaitis 2020-06-29 Tracing the shift from liberal to neoliberal education from the nineteenth century to the present day, this open access book provides a rich and previously underdeveloped narrative of value in higher education in England. *Value and the Humanities* draws upon historical, financial, and critical debates concerning educational and

cultural policy. Rather than writing a singular defence of the humanities against economic rationalism, Zoe Hope Bulaitis constructs a nuanced map of the intersections of value in the humanities, encompassing an exploration of policy engagement, scientific discourses, fictional representation, and the humanities in public life. The book articulates a kaleidoscopic range of humanities practices which demonstrate that although recent policy encourages higher education to be entirely motivated by outcomes, fiscal targets, and the acquisition of employability skills, the humanities continue to inspire and aspire beyond these limits. This book is a historically-grounded and theoretically-informed analysis of the value of the humanities within the context of the market.

**Redefining British Politics** L. Black 2010-02-24 A history of 1950s and 1960s British political culture, *Redefining British Politics* interrogates ideas, movements and identities bordering social and political change: consumer organisations; campaigns about TV, morality and culture; Young Conservatism; and how party politics used media like TV and was represented in popular culture.

*Two Cultures?* F. R. Leavis 2013-08-29 In this first annotated edition of F. R. Leavis' famous critique of C. P. Snow's influential argument about 'the two cultures', Stefan Collini reappraises both its literary tactics and its purpose as cultural criticism. The edition will enable new generations of readers to understand what was at stake in the dispute and to appreciate the enduring relevance of Leavis's attack on the goal of economic growth. In his comprehensive introduction Collini situates Leavis's critique within the wider context of debates about 'modernity' and 'prosperity', not just the 'two cultures' of literature and science. Collini emphasizes the difficulties faced by the cultural critic in challenging widely-held views and offers an illuminating analysis of Leavis's style. The edition provides full notes to references and allusions in Leavis's texts.
