The Flute Book Nancy Toff 2012-08-02 Teachers and flutists at all levels have praised Nancy Toff's *The Flute Book*, a unique one-stop guide to the flute and its music. Organized into four main parts--The Instrument, Performance, The Music, and Repertoire Catalog--the book begins with a description of the instrument and its making, offers information on choosing and caring for a flute, sketches a history of the flute, and discusses differences between members of the flute family. In the Performance section, readers learn about breathing, tone, vibrato, articulation, technique, style, performing, and recording. In the extensive analysis of flute literature that follows, Toff places individual pieces in historical context. The book ends with a comprehensive catalog of solo and chamber repertoire, and includes appendices with fingering charts as well as lists of current flute manufacturers, repair shops, sources for flute music and books, and flute clubs and related organizations worldwide. In this Third Edition, Toff has updated the book to reflect technology's advancements--like new digital recording technology and recordings' more prevalent online availability--over the last decade. She has also accounted for new scholarship on baroque literature; recent developments such as the contrabass flute, quarter-tone flute, and various manufacturing refinements and experiments; consumers' purchase prices for flutes; and a thoroughly updated repertoire catalog and appendices.

Introduction to Partial Differential Equations Peter J. Olver 2013-11-08 This textbook is designed for a one year course covering the fundamentals of partial differential equations, geared towards advanced undergraduates and beginning graduate students in mathematics, science, engineering, and elsewhere. The exposition carefully balances solution techniques, mathematical rigor, and significant applications, all illustrated by numerous examples. Extensive exercise sets appear at the end of almost every subsection, and include straightforward computational problems to develop and reinforce new techniques and results, details on theoretical developments and proofs, challenging projects both computational and conceptual, and supplementary material that motivates the student to delve further into the subject. No previous experience with the subject of partial differential equations or Fourier theory is assumed, the main prerequisites being undergraduate calculus, both one- and multi-variable, ordinary differential equations, and basic linear algebra. While the classical topics of separation of variables, Fourier analysis, boundary value problems, Green's functions, and special functions continue to form the core of an introductory course, the inclusion of nonlinear equations, shock wave dynamics, symmetry and similarity, the Maximum Principle, financial models, dispersion and solutions, Huygens' Principle, quantum mechanical systems, and more make this text well attuned to recent developments and trends in this active field of contemporary research. Numerical approximation schemes are an important component of any introductory course, and the text covers the two most basic approaches: finite differences and finite elements.

Arming without Aiming Stephen P. Cohen 2013-01-14 India has long been motivated to modernize its military, and it now has the resources. But so far, the drive to rebuild has lacked a critical component—strategic military planning. India's approach of arming without strategic purpose remains viable, however, as it seeks great-power accommodation of its rise and does not want to appear threatening. What should we anticipate

from this effort in the future, and what are the likely ramifications? Stephen Cohen and Sunil Dasgupta answer those crucial questions in a book so timely that it reached number two on the nonfiction bestseller list in India. "Two years after the publication of *Arming without Aiming*, our view is that India's strategic restraint and its consequent institutional arrangement remain in place. We do not want to predict that India's military-strategic restraint will last forever, but we do expect that the deeper problems in Indian defense policy will continue to slow down military modernization."—from the preface to the paperback edition

What Is a People? Alain Badiou 2016-05-03 *What Is a People?* seeks to reclaim "people" as an effective political concept by revisiting its uses and abuses over time. Alain Badiou surveys the idea of a people as a productive force of solidarity and emancipation and as a negative tool of categorization and suppression. Pierre Bourdieu follows with a sociolinguistic analysis of "popular" and its transformation of democracy, beliefs, songs, and even soups into phenomena with outsized importance. Judith Butler calls out those who use freedom of assembly to create an exclusionary "we," while Georges Didi-Huberman addresses the problem of summing up a people with totalizing narratives. Sadri Khiari applies an activist's perspective to the racial hierarchies inherent in ethnic and national categories, and Jacques Rancière comments on the futility of isolating theories of populism when, as these thinkers have shown, the idea of a "people" is too diffuse to support them. By engaging this topic linguistically, ethnically, culturally, and ontologically, the voices in this volume help separate "people" from its fraught associations to pursue more vital formulations. Together with *Democracy in What State?*, in which Giorgio Agamben, Alain Badiou, Daniel Bensaid, Wendy Brown, Jean-Luc Nancy, Jacques Rancière, Kristin Ross, and Slavoj Žižek discuss the nature and purpose of democracy today, *What Is a People?* expands an essential exploration of political action and being in our time.

Why is Shut Down on the Start menu? (And why is there a Start button, anyway?) How can I tap into the dialog loop? Why does the GetWindowText function behave so strangely? Why are registry files called "hives"? Many of Windows' quirks have perfectly logical explanations, rooted in history. Understand them, and you'll be more productive and a lot less frustrated.
