Mind, Morality and Magic Istvan Czachesz 2014-10-14 The cognitive science of religion that has emerged over the last twenty years is a multidisciplinary field that often challenges established theories in anthropology and comparative religion. This new approach raises many questions for biblical studies as well. What are the cross-cultural cognitive mechanisms which explain the transmission of biblical texts? How did the local and particular cultural traditions of ancient Israel and early Christianity develop? What does the embodied and socially embedded nature of the human mind imply for the exegesis of biblical texts? "Mind, Morality and Magic" draws on a range of approaches to the study of the human mind - including memory studies, computer modeling, cognitive theories of ritual, social cognition, evolutionary psychology, biology of emotions, and research on religious experience. The volume explores how cognitive approaches to religion can shed light on classical concerns in biblical scholarship - such as the transmission of traditions, ritual and magic, and ethics - as well as uncover new questions and offer new methodologies.

Due Process and Fair Trial in EU Competition Law Cristina Teleki 2021 In Due Process and Fair Trial in EU Competition Law, Cristina Teleki addresses the complex relationship between Articles 101 and 102 of the Treaty on the Functioning of the European Union and Article 6 of the European Convention on Human Rights. The book is built around the idea that big business can threaten democracy. Due process and fair trial should be central to the process of addressing bigness through competition law, by safeguarding independent decision-making and judicial review and by preventing competition authorities from growing into administrative behemoths threatening democracy from inside. To show this, the book combines a comprehensive review of the case-law of the European Court of Human Rights with insight from economics, psychology and systems theory.

Guide for the Care and Use of Laboratory Animals National Research Council 2011-01-27 A respected resource for decades, the Guide for the Care and Use of Laboratory Animals has been updated by a committee of experts, taking into consideration input from the scientific and laboratory animal communities and the public at large. The Guide incorporates new scientific information on common laboratory animals, including aquatic species, and includes extensive references. It is organized around major components of animal use: Key concepts of animal care and use. The Guide sets the framework for the humane care and use of laboratory animals. Animal care and use program. The Guide discusses the concept of a broad Program of Animal Care and Use, including roles and responsibilities of the Institutional Official, Attending Veterinarian and the Institutional Animal Care and Use Committee. Animal environment, husbandry, and management. A chapter on this topic is now divided into sections on terrestrial and aquatic animals and provides recommendations for housing and environment, husbandry, behavioral and population management, and more. Veterinary care. The Guide discusses veterinary care and the responsibilities of the Attending Veterinarian. It includes recommendations on animal procurement and transportation, preventive medicine (including animal biosecurity), and clinical care and management. The Guide addresses distress and pain recognition and relief, and issues surrounding euthanasia. Physical plant. The Guide identifies design issues, providing construction guidelines for functional areas; considerations such as drainage, vibration and noise control, and environmental monitoring; and specialized facilities for animal housing and research needs. The Guide for the Care and Use of Laboratory Animals provides a framework for the judgments required in the management of animal facilities. This updated and expanded resource of proven value will be important to scientists and researchers, veterinarians, animal care personnel, facilities managers, institutional administrators, policy makers involved in research issues, and animal welfare advocates.

Identify and Sort Ansoorge Josef Teboho 2016 The advent of information technology ushered in new forms of political power. Machines play crucial roles in how states see, understand, and act, and scrutiny of these

processes lies at the heart of Identify and Sort. It frames debates about IT in world politics, explaining how industrial sorting systems employed by political actors are renegotiating the social contract between individuals and the state. Ansoorge takes the reader on a global expedition that tracks the historical antecedents of digital power, from Aztec and Inca rituals, to medieval filing systems, to a grandiose 1930s design for a German registry, to the databases used in US presidential campaigns and how IT is deployed in war and post-conflict reconstruction. Databases are also deployed virtually to record and act upon people who have no publicly visible identification or group consciousness; modern wars and election campaigns are fought on this individualised terrain. The uneven distribution of these technical capacities engenders inequality of access, while rights discourses and legal frameworks forged in an era of mass group discrimination, subjugation, and public resistance lag behind these micro-targeting practices. Rich in examples and ideas, Identify and Sort develops an analytical model and vocabulary to explain the functions and limits of digital power in world politics.
