[The Philosophy of Ralph Waldo Emerson](#) Joseph Urbas 2020-09-07 This study offers the first comprehensive account of Emerson's philosophy since his philosophical rehabilitation began in the late 1970s. It builds on the historical reconstruction proposed in the author's previous book, *Emerson's Metaphysics*, and like that study draws on the entire Emerson corpus—the poetry and sermons included. The aim here is expository. The overall though not exclusive emphasis is on identity, as the first term of Emerson's metaphysics of identity and flowing or metamorphosis. This metaphysics, or general conception of the nature of reality, is what grounds his epistemology and ethics, as well as his esthetic, religious, and political thought. Acknowledging its primacy enables a general account like this to avoid the anti-realist overemphasis on epistemology and language that has often characterized rehabilitation readings of his philosophy. After an initial chapter on Emerson's metaphysics, the subsequent chapters devoted to the other branches of his thought also begin with their "necessary foundation" in identity, which is the law of things and the law of mind alike. Perception of identity in metamorphosis is what characterizes the philosopher, the poet, the scientist, the reformer, and the man of faith and virtue. Identity of mind and world is felt in what Emerson calls the moral sentiment. Identity is Emerson's answer to the Sphinx-riddle of life experienced as a puzzling succession of facts and events.

Counteracting Urban Heat Island Effects in a Global Climate Change Scenario Francesco Musco 2016-08-30 Urban heat islands are a new type of microclimatic phenomenon that causes a significant increase in the temperature of cities compared to surrounding areas. The phenomenon has been enforced by the current trend towards climate change. Although experts consider urban heat islands an urgent European Union public health concern, there are too few policies that address it. The EU carried out a project to learn more about this phenomenon through pilot initiatives. The pilots included feasibility studies and strategies for appropriately altering planning rules and governance to tackle the problem of urban heat islands. The pilots were carried out in eight metropolitan areas: Bologna/Modena, Budapest, Ljubljana, Lodz, Prague, Stuttgart, Venice/Padova, and Vienna. The feasibility studies carried out in these pilot areas focused on the specific morphology of EU urban areas, which are often characterised by the presence of historical old towns.

Greta Vidal Antonella Sbuclz Carignani 2012 This is a historical novel with a difference. The narrator delves into the past of her previously unknown grandmother, the Greta of the title, concentrating on Greta's experiences as an 18 year old Italian convent girl in Fiume, 1919-1920. The book imaginatively chronicles sixteen months as experienced by Greta and her chief mentor, Tullio, the young journalist from Udine with his adventurer-aviator friend, Giulio Kepler and yet another character trying to find the key to meaning in his life, the American Paul Forst. Obsessive memories of the recent horrors of the Great War haunt the minds and the lives of these young men as they face the new ordeal of Fiume under blockade, following the occupation of the city by Gabriele d'Annunzio at the head of a small army of disaffected soldiers, trying to annexe Fiume to Italy. For Greta, this

rite of passage carries her into the responsibilities of both history and womanhood.
