Teaching and Learning with Technology Concetta M. Stewart 2010-07-02 Today, new media is both augmenting and extending the traditional classroom with a variety of technology-based tools available to both students and faculty, and has created "new" virtual classrooms for anywhere, anytime availability to education. Despite the enormous potential for technology to support the educational enterprise in this emerging "creative" economy, technologies are still not yet fully integrated in the classroom and their association with educational outcomes is as-yet unclear. This book profiles scholarly work from around the world to examine closely the effectiveness of the newest media in education at bridging the gaps among and between teachers, students and subject matter at all levels, from K-12 through adult education. These pieces are theory-based investigations with

implications for future research, theory and application. Contributors examine how the fields of education and new media have evolved and are continuing to evolve pedagogically and practically, from predominantly instructivist, with a passive, one-way teaching format; to constructivist, including teacher- and learner-controlled, sensorially immersive and socially interactive exchanges. This book will be of interest to students and faculty in the areas of new media in education, including distance learning, online learning and "virtual" learning.

Best Practices for Technology-Enhanced Teaching and Learning

Dana S. Dunn 2011-02-02 The use of technology and teaching techniques derived from technology is currently a burgeoning topic in higher education. Teachers at all levels and types of institutions want to know how these new technologies will affect what happens in and outside of the classroom. Many teachers have already embraced some of these technologies but remain uncertain about their educational efficacy. Other teachers have waited because they are reluctant to try tools or techniques that remain unproven or, as is often the case, lack institutional support. This book is designed to help both groups, so that those with technological expertise can extend their knowledge, while technological novices can "ramp up" at their own pace and for their own purposes. Best Practices for Technology-Enhanced Teaching and Learning brings together expert teacher-scholars who apply and assess technology's impact on traditional, hybrid or blended, or completely on-line courses, relying on technology as a teaching tool for classroom management and interaction (e.g., Blackboard, PowerPoint, student response or "clicker systems," multimedia tools), as well as student-based uses of technology largely independent of instructors (e.g., social networking on popular sites including Facebook and MySpace). Each chapter will address how technological improvements can be connected to assessment initiatives, as is now routinely advocated in psychology and social science education. The book features current scholarship and pedagogy involving innovative technology that impacts on student learning in psychology and related disciplines, focusing also on student reactions to these novel technologies, and proper assessments of how well they

promote learning. This text will serve as the standard reference on emerging technologies for undergraduate instructors.
