Bioactive Compounds Against SARS-CoV-2 Jen-Tsung Chen 2023-09-26 Coronaviruses can cause illness, severe disease, and death; for example, Middle East respiratory syndrome (MERS), severe acute respiratory syndrome (SARS), and COVID-19. Vaccine development and antiviral drugs are challenged by the propensity for viral mutations allowing these viruses to evade such therapies. There are a number of bioactive compounds from natural sources, which can exert health benefits and act as antiviral therapies such as anti-inflammation, antioxidative stress, and immune regulation. This book summarizes research on the potential efficacy and underlying mechanisms of bioactive compounds and traditional medicines against SARS-CoV-2. Key Features Summarizes the potential benefits of bioactive therapies for coronaviruses Focuses on COVID-19, but also covers MERS and SARS Provides alternatives to vaccines and other antiviral drugs whose efficacy is reduced by viral mutations Relevant for clinicians and public health officials

Paper Chemistry J.C. Roberts 1995-12-31 Although the title of this book is Paper Chemistry, it should be considered as a text about the chemistry of the formation of paper from aqueous suspensions of fibre and other additives, rather than as a book about the chemistry of the raw material itself. It is the subject of what papermakers call wet-end chemistry. There are many other excellent texts on the chemistry of cellulose and apart from one chapter on the accessibility of cellulose, the subject is not addressed here. Neither does the book deal with the chemistry of pulp preparation (from wood, from other plant sources or from recycled fibres), for there are also many excellent texts on this subject. The first edition of this book was a great success and soon became established as one of the Bibles of the industry. Its achievement then was to collect the considerable advances in understanding which had been made in the chemistry of papermaking in previous years, and provide, for the first time, a sound physico chemical basis of the subject. This new edition has been thoroughly updated with much new material added. The formation of paper is a continuous filtration process in which cellulosic fibres are formed into a network which is then pressed and dried. The important chemistry involved in this process is firstly the retention of col loidal material during filtration and secondly the modification of fibre and sheet properties so as to widen the scope for the use of paper and board products.

Saharan Jews and the Fate of French Algeria Sarah Abrevaya Stein 2014-05-06 The history of Algerian Jews has thus far been viewed from the perspective of communities on the northern coast, who became, to some extent, beneficiaries of colonialism. But to the south, in the Sahara, Jews faced a harsher colonial treatment. In *Saharan Jews and the Fate of French Algeria*, Sarah Abrevaya Stein asks why the Jews of Algeria's south were marginalized by French authorities, how they negotiated the sometimes brutal results, and what the reverberations have been in the postcolonial era. Drawing on materials from thirty archives across six countries, Stein tells the story of colonial imposition on a desert community that had lived and traveled in the Sahara for centuries. She paints an intriguing historical picture—of an ancient community, trans-Saharan commerce, desert labor camps during World War II, anthropologist spies, battles over oil, and the struggle for Algerian sovereignty. Writing colonialism and decolonization into Jewish history and Jews into the French Saharan one, *Saharan Jews and the Fate of French Algeria* is a fascinating exploration not of Jewish exceptionalism but of colonial power and its religious and cultural differentiations, which have indelibly shaped the modern world.

A Diplomatic Revolution Matthew Connelly 2002-04-11 Algeria sits at the crossroads of the Atlantic, European, Arab, and African worlds. Yet, unlike the wars in Korea and Vietnam, Algeria's fight for independence has rarely been viewed as an international conflict. Even forty years later, it is remembered as the scene of a national drama that culminated with Charles de Gaulle's decision to "grant" Algerians their independence despite assassination attempts, mutinies, and settler insurrection. Yet, as Matthew Connelly demonstrates, the war the Algerians fought occupied a world stage, one in which the U.S. and the USSR, Israel and Egypt, Great Britain, Germany, and China all played key roles. Recognizing the futility of confronting France in a purely military struggle, the Front de Libération Nationale instead sought to exploit the Cold War competition and regional rivalries, the spread of mass communications and emigrant communities, and the proliferation of international and non-governmental organizations. By harnessing the forces of nascent globalization they divided France internally and isolated it from the world community. And, by winning rights and recognition as Algeria's legitimate rulers without actually liberating the national territory, they rewrote the rules of international relations. Based on research spanning three continents and including, for the first time, the rebels' own archives, this study offers a landmark reevaluation of one of the great anti-colonial struggles as well as a model of the new international history. It will appeal to historians of post-colonial studies, twentieth-century diplomacy, Europe, Africa, and the Middle East. *A Diplomatic Revolution* was winner of the 2003 Stuart L. Bernath Prize of the Society for Historians of American Foreign Relations, and the Akira Iriye International History Book Award, The Foundation for Pacific Quest.

Advanced Composites Shadia Jamil Ikhmayies 2023-11-30 This book presents a comprehensive collection of reviews and experimental research findings in the realm of composite materials. It explores manufacturing technologies and applications, as well as recent breakthroughs in nanomaterial-based composites, polymer-based composites, titanium matrix composites (TMCs), conducting polymers, natural polymers, graphene polymers, graphene composites, and organosulfur polymeric composites, alongside reinforced aluminum matrix composites. The mechanical and tribological aspects take center stage, with a focus on aluminum alloy composites as a superior alternative to traditional gear materials. The book also addresses cutting-edge composite materials developed for drug removal via adsorption techniques, radiation shielding, and their use as shielding

absorbers for ionizing radiation. Furthermore, the significance of electrical contact materials and their performance is explored. The book unveils fabrication methods, sample preparation techniques, properties, and various applications of these remarkable composites. Topics range from additive manufacturing to solid-phase extraction and solid-phase microextraction utilizing diverse composites as adsorbents. Additionally, the inverse vulcanization process, a novel technique involving the copolymerization of elemental sulfur with different monomers based on their resource origins, is discussed. Technologies such as powder metallurgy (PM), mechanical alloying (MA), self-propagating high-temperature synthesis (SHS), and rapid solidification processing (RSP) are described. The book further delves into the preparation techniques of zeolite using both conventional and advanced methods, along with the synthesis of various zeolite-based composites, particularly their application in environmental remediation. The book culminates with a summary of analysis and modeling techniques used in composite materials, including those employed in ballistic applications.

Essentials of Medicinal and Aromatic Crops Muhammad Zia-Ul-Haq 2023-10-09 Medicinal and aromatic crops (MACs) are high-value crops since the natural products obtained from them are low-volume high-value commodities that have numerous applications in various sectors such as the food, beverage, food supplement, flavor and fragrance, perfumery and cosmetics, pharmaceutical and aromatherapy industries. In addition, the plant biomass is used in the production of teas and medical applications in traditional and also modern medicines. MACs are important mainly because they contain plant secondary metabolites such as essential oils, alkaloids, glycosides, saponins, tannins, vitamins and other bioactives. Plant secondary metabolites are differentiated from plant primary metabolites of photosynthesis and respiration since they are directly involved in growth and development of plants. Some MACs are used as spices and culinary herbs since they contain mainly essential oils, and are used as tonic to the digestive system, appetite modification and other systems and may facilitate nutrient uptake and utilization from various foods. A significant amount of MACs and their natural products have also demonstrated antimicrobial, antifungal and bactericidal activity and significant antioxidant capacity. In the past, MACs and their natural products have been used as a source for various medicines, in food and beverage production and in aroma products. *Essentials of Medicinal and Aromatic Crops* summarizes the current knowledge on medicinal and aromatic crops, including the agronomical practices of important MACs and their products, their beneficial effects and utilization of MAP and their products. The chapters provide a comprehensive guide to the most important and used medicinal and aromatic crops and their use in functional foods, nutraceuticals and as bioactives against various ailments, providing researchers, teachers, chemists, food scientists, agronomists and agroecologists in academia, industry and government a fully up to date singular source on this important topic.

A Savage War of Peace Alistair Horne 2012-08-09 Thoroughly sharp and honest treatment of a brutal conflict. The Algerian War (1954-1962) was a savage colonial war, killing an estimated one million Muslim Algerians and expelling the same number of European settlers from their homes. It was to cause the fall of six French prime ministers and the collapse of the Fourth Republic. It came close to bringing down de Gaulle and - twice - to plunging France into civil war. The story told here contains heroism and tragedy, and poses issues of enduring relevance beyond the confines of either geography or time. Horne writes with the extreme intelligence and perspicacity that are his trademarks.

In a land where Islamic terrorists have executed over sixty journalists and photographers in the last seven years, Graffenried's very survival is remarkable. His extraordinary accomplishment, however, is these photographs, which form a composite of Algeria that is more whole than the nation itself, fractured by one segment of the population in favor of democracy and another in favor of an Islamic state.
