Dinosaurs Donald F. Glut 2000 Here is the fourth supplement to *Dinosaurs: The Encyclopedia*, a 1998 American Library Association Outstanding Reference Book (ARBA called it "a reference legend...lavishly illustrated, cleverly written, and extraordinarily comprehensive"). This volume updates the concepts discussed in the encyclopedia and its earlier supplements. It includes a discussion of the Mesozoic Era, covers recent discoveries in paleontology, and furthers the ectothermy/endothermy debate from previous installments. It also offers lengthy sections on dinosaurian schematics and genera and updates the encyclopedia's list of excluded genera. Appendices discuss Pterosaurs and Mesozoic birds, and a glossary is included to aid students and scientists alike. The extensive bibliography lists the most recent peer-evaluated paleontology literature. Supplemental volumes do not repeat information from earlier volumes, but build upon them: ISBN 978-0-7864-7222-2 Original Encyclopedia ISBN 978-0-7864-0591-6 Supplement 1 ISBN 978-0-7864-1166-5 Supplement 2 ISBN 978-0-7864-1518-2 Supplement 3 ISBN 978-0-7864-2295-1 Supplement 4 ISBN 978-0-7864-3241-7 Supplement 5 ISBN 978-0-7864-4187-7 Supplement 6 ISBN 978-1-4766-6548-1 Supplement 7

South American Sauropodomorph Dinosaurs Alejandro Otero 2022-04-25 Sauropodomorpha Huene 1932 is one of the most successful groups of dinosaurs, including the most abundant and diverse herbivorous forms with a worldwide record, extending from the late Triassic to the late Cretaceous. Sauropodomorphs comprise a diverse assemblage of early forms (traditionally called "prosauropods") and the well-established clade Sauropoda Marsh 1878. Early sauropodomorphs were small to medium sized forms, with long necks and reduced skulls, mostly bipeds and omnivores and were abundant in continental environments in the Late Triassic and Early Jurassic. With more than 150 valid species and a worldwide distribution, Sauropoda includes the dominant herbivorous dinosaurs, from the Middle Jurassic to the Late Cretaceous. Its unique body plan, characterized by gigantic size, graviportal locomotion, long necks and tails, and reduced skulls, made this group an undisputed icon in popular culture since the 19th century. In South America, the sauropodomorph record is particularly rich and abundant, and many species have shed light to understand important milestones in the evolutionary history of this group of dinosaurs. The origin of Sauropodomorpha, the transition to Sauropoda, and the diversification of its most successful evolutionary lineages are largely exemplified by the South American fossil record. In this contribution, we synthesize the diversity of sauropodomorphs from South America, including data on their geographic and stratigraphic provenance, phylogenetics, paleobiology, taphonomy and behaviour, underscoring their significance within the context of sauropodomorph evolution.

50 Dinosaur Tales Sabrina Ricci 2019-10-08 "Gualicho takes a bite out of the ornithomimid's back as it runs away from her, causing it to stumble and fall. She jumps on top of the body and rips open its neck with her teeth. The ornithomimid becomes still and limp. Satisfied, Gualicho begins to feast. But, after only two bites, she senses something is wrong. She lifts her head and sees a Mapusaurus making its way toward her." Blending fiction with fact, *50 Dinosaur Tales* imagines the way 50 newly described dinosaurs from the Triassic, Jurassic, and Cretaceous lived in their natural habitats. Also included is a list of fun facts for each dinosaur story, and facts about 108 additional dinosaurs. If you want to hear more about new dinosaurs as soon as they are discovered, listen to the weekly podcast *I Know Dino*. "50 Dinosaur Tales: And 108 More Discoveries From the Golden Age of Dinos is the perfect blend of education and entertainment, as both young and old readers are invited to see the world through a very different set of eyes. Authors Sabrina Ricci and Garret Kruger bring to life some lesser-known dinosaurs from Earth's prehistory, weaving unique facts into simple stories. At times, this book reads like Aesop's Fables, if they had been set in the Mesozoic Era, while the post-story bullet points and reference materials give the book significant authority and impact." —SPR

Song of the Earth Elisabeth Ervin-Blankenheim 2021-10-12 A loving portrayal of our precious planet that offers easy-to-grasp discussions of scientific concepts and detailed examinations of Earth's tectonic, biological, and paleontological forces... Did you know that the history of Earth can be revealed by examining everything on it? From the esoteric science of minerals to the interactions between humans and their environment, our planet provides answers to every question we could ask about its history and what lies ahead. As climate change impacts everything we do on our planet, now is the time to take a closer look at what messages Earth has for us: what does it mean when the wind blows or the ground shifts? In this book, geologist Elisabeth Ervin-Blankenheim reveals the history of our planet through a geologic lens and explains why everyone should care about it. *Song of the Earth* is a thrilling biography of our planet that equips readers with the scientific, historical, and philosophical symbiosis between humans and Earth. Ervin-Blankenheim explores geologic principles of deep time, plate tectonics, and change in life forms in plain English. The book is illustrated with striking maps, diagrams, and pictures, allowing her to dissect everything from how a roiling, molten planet cooled to how the first cyanobacteria began to oxygenate the atmosphere to how the atmosphere has changed over time. Ervin-Blankenheim journeys through the science with ease and provides narrative sections about pioneering geologists and their groundbreaking discoveries. In viewing the planet as the integrated ecosystem it is, Ervin-Blankenheim showcases how land, water, life, and the atmosphere maintain an elegant yet delicate balance—one that, based on the author's evidence of current trends in the context of past planetary cataclysm, appears to be under imminent threat. At times both gripping and lovingly poetic, *Song of the Earth* shows not only how Earth has influenced life, but also how life has distinctly shaped our planet.

Neo Leo Gene Barretta 2009-08-04 An introduction to Leonardo da Vinci's genius focusing on his famous notebook sketches and the modern inventions they predicted. In 1781, Thomas Paine came up with a model for a single-span bridge; in 1887, Adolf Eugen Fick made the first pair of contact lenses; and in 1907, Paul Cornu built the first helicopter. But Leonardo da Vinci thought of all these ideas more than five hundred years ago! At once an artist, inventor, engineer, and scientist, da Vinci wrote and drew detailed descriptions of what would later become hang gliders, automobiles, robots, and much more. In *Neo Geo*, Gene Barretta cleverly shows how Leonardo's ideas—many inspired by his love of nature—foreshadowed modern inventions, offering a window into the future.

Leonardo da Vinci's Flying Machine Kit David Hawcock 2019-01-01 Painter, architect, scientist, inventor—Leonardo da Vinci ranks as history's consummate innovator. Consumed with a boundless desire for knowledge, he investigated technical challenges that were hundreds of years ahead of his time. The power of flight was a particular source of fascination for him, and his close studies of bird anatomy and movement informed his development of the ornithopter — a winged, human-powered aircraft. With Leonardo's da Vinci's Flying Machine, you can create a fully working model of the inventor's amazing creation. This self-contained model kit features a 48-page book with details from Leonardo's notebooks plus full-color, easily joined components. Once assembled, the wings flap by turning a crank. Like the prototype, your model won't actually fly, but you'll have an amazing replica of one of the Renaissance genius's most famous futuristic inventions.

Leonardo Serge Bramly 1995-03-01 "A considerable work of assimilative scholarship and common sense...races along merrily."—The Boston Globe A lively biography of the high genius of the renaissance, Leonardo da Vinci French writer Serge Bramly's classic work of biography portrays Leonard da Vinci as a genius torn by inner conflicts. Using contemporary sources including Leonardo's notebooks and annotated erotic drawings, he presents

a complete portrait of the man as well as his genius.

The Unity of Science Irwin Shapiro 2023-10-31 A journey guided by science that explores the universe, the earth, and the story of life For Irwin Shapiro, science starts with questions. This book provides a broad and entertaining survey of major scientific discoveries that have changed our views of nature and, in turn, spawned further questions. Shapiro, an award-winning scientist and beloved teacher, separates his inquiry into three parts: looking up at the universe; looking down at the earth and its fossils; and looking in at the story of life. His framework encourages readers to view science as a detective story—to observe and question nature and natural phenomena, and to base all conclusions on scientific evidence. With his knowledgeable yet conversational approach, Shapiro offers an enjoyable way for the curious to learn about the foundations of a range of scientific topics: the motions of bodies in the cosmos, the history and structure of the earth, the evolution of organisms, and the search for extraterrestrial life and intelligence.

Romancing the Birds and Dinosaurs Alan Feduccia 2020-10-15 Birds and dinosaurs have dominated human interest for decades. In this well-supported revolutionary view of the field, critical questions are explored with credible evidence and biological thought. Are birds derived directly from advanced dinosaurs, or are they closely related dinosaur cousins? Did flight originate via the natural "gravity-assisted" trees-down model, or from the improbable "gravity-resisted" ground-up model? Were the earliest birds ground-predators or trunk-climbing gliders? Were dinosaurs hot-blooded with insulating protofeathers, or highly active, cold-blooded reptiles? These are among the questions addressed in this path-breaking book. Current consensus suggests that early birds were earth-bound and flight began on the ground. Reversing that logic, since birds are hot-blooded, by inference so too were dinosaurs, and extraordinarily complex feathers, flight brain and inner ear, evolved before flight in dinosaurs. The iconic early bird Archaeopteryx, despite innumerable flight and arboreal features, is now displayed as an earth-bound predator that could not fly. In reality, we have yet to provide satisfactory explanations for much of the biological origin and early evolution of birds. Among the questions addressed is whether truly feathered dinosaurs are in reality lost or "hidden birds?" The architectural complexity of feathers leads the author to the conclusion that if an animal has evolved extraordinarily complex, aerodynamically-designed feathers, an avian flight hand, flight membranes, and a flight brain, it's a bird. Birds and dinosaurs captivate and enchant the human imagination. These intriguing animals have dominated the field of paleontology and evolution for the past half century, engendering heated debate on avian ancestry, the origin of flight and feathers, and the biology of their fossils. Are birds living dinosaurs? In this series of entertainingly contentious and captivating essays evolutionary biologist Alan Feduccia writes with verve and humor to expose major problems in the field and advocate liberation from the shackles of consensus thinking about birds and dinosaurs. He maintains that the euphoria of paleontologists claiming to have solved the major problems of bird evolution is premature, largely generated by the adoption of a rigid, cult-like methodology, heavily blended with ideology, and excluding many biological and geological principles. He adroitly exposes and elucidates major mistakes in the field and their aftermath. Romancing the Birds and Dinosaurs is a lucid revelation of clarity and synthesis, a fascinating unveiling of the underlying science that has produced the good, but also often appalling fossil research and wild speculation in bird and dinosaur evolution. A must read for anyone interested in this rapidly evolving field, the short, concise and incisive essays provide the reader with access to this complex topic. **REVIEWS and WORDS OF PRAISE** In this strikingly unconventional and brilliant book, Professor Alan Feduccia presents the current status of the recent controversy about the origin of birds with clarity and vigor. A thought-provoking personal exploration of what the bird fossils represent. ---Sankar Chatterjee, Paul Whitfield Horn Distinguished Professor of Geosciences and Curator of Paleontology, Texas Tech University. Feduccia's book eloquently reminds us that consensus science is to be shied away from especially when it is used to plead special cases against basic scientific principles. The concept of "lost birds" is particularly intriguing as it defines what birds are and how special science obfuscates the simplicity of evolution. ---David A. Burnham, Associate Researcher, University of Kansas Biodiversity Institute and Natural History Museum. Based on a thorough understanding of the empirical evidence, Feduccia presents a convincing account of avian origins from their putative ancestors. ---Walter J. Bock, Professor of Evolutionary Biology, Columbia University and Research Associate, American Museum of Natural History. With candor, clear thinking, humor, and abundant evidence, Alan Feduccia's Romancing the Birds and Dinosaurs should be mandatory reading for the countless millions who are intrigued by dinosaurs and their relatives, the birds. Feduccia points out the many empirical and logical shortcomings in the stubborn majority view that birds evolved from dinosaurs, an idea now solidly entrenched as dogma in education and popular culture. This new book will be as interesting to those who study human behavior and scientific methods as it will to students of vertebrate evolution. ---David W. Steadman, Curator of Ornithology, Professor of Biology, Florida Museum of Natural History, University of Florida.

Evoluti per caso Fabio Procacciantè 2023-07-24 A guidare l'evoluzione non c'è un disegno intelligente o un risultato da raggiungere. C'è solo un'inconfutabile realtà: il pianeta subisce continui, impercettibili e radicali cambiamenti, a volte sconvolgenti, e la vita cerca di adattarsi come può. Questo volume racconta un lungo viaggio: dalle forme più elementari e ancestrali della vita, i batteri, insostituibili benefattori alcuni, nostri mortali nemici altri, fino ai sapiens, che al momento rappresentano il culmine di un percorso evolutivo su questo pianeta che è passato da catastrofi ecologiche e accelerazioni genetiche a sconvolgimenti ambientali ed estinzioni imprevedibili. Il tutto raccontato con il linguaggio della scienza e della divulgazione. Il genere umano non compare per caso nella storia dell'evoluzione, bensì a seguito di un lunghissimo iter durato miliardi di anni e in cui ogni evento, ogni circostanza, ogni passaggio ha determinato quello successivo. Se solo uno di questi avvenimenti fosse stato diverso, oggi non saremmo qui a leggere questo libro.

Articulating Dinosaurs Brian Noble 2016-01-01 In this remarkable interdisciplinary study, anthropologist Brian Noble traces how dinosaurs and their natural worlds are articulated into being by the action of specimens and humans together. Following the complex exchanges of palaeontologists, museums specialists, film- and media-makers, science fiction writers, and their diverse publics, he witnesses how fossil remains are taken from their partial state and re-composed into astonishingly precise, animated presences within the modern world, with profound political consequences. *Articulating Dinosaurs* examines the resurrecting of two of the most iconic and gendered of dinosaurs. First Noble traces the emergence of *Tyrannosaurus rex* (the "king of the tyrant lizards") in the early twentieth-century scientific, literary, and filmic cross-currents associated with the American Museum of Natural History under the direction of palaeontologist and eugenicist Henry Fairfield Osborn. Then he offers his detailed ethnographic study of the multi-media, model-making, curatorial, and laboratory preparation work behind the Royal Ontario Museum's groundbreaking 1990s exhibit of *Maiasaura* (the "good mother lizard"). Setting the exhibits at the AMNH and the ROM against each other, Noble is able to place the political natures of *T. rex* and *Maiasaura* into high relief and to raise vital questions about how our choices make a difference in what comes to count as "nature." An original and illuminating study of science, culture, and museums, *Articulating Dinosaurs* is a remarkable look at not just how we visualize the prehistoric past, but how we make it palpable in our everyday lives.

The Evolution and Extinction of the Dinosaurs David E. Fastovsky 2005-02-07 This 2005 edition of *The Evolution and Extinction of the Dinosaurs* is a unique, comprehensive treatment of this fascinating group of organisms. It is a detailed survey of dinosaur origins, their diversity, and their eventual extinction. The book can easily be used as a teaching textbook for a class, but it is also written as a series of readable, entertaining essays covering important and timely topics appealing to non-specialists and all dinosaur enthusiasts: birds as 'living dinosaurs', the new feathered dinosaurs from China, 'warm-bloodedness'. Along the way, the reader learns about dinosaur functional morphology, physiology, and systematics using cladistic methodology - in short, how professional paleontologists and dinosaur experts go about their work, and why they find it so rewarding. The book is spectacularly illustrated by John Sibbick, a world-famous illustrator of dinosaurs, commissioned exclusively for this book.

The Passenger: Ireland The Passenger 2022-04-12 The best new writing, photography, art, and reportage from and about Ireland—in the series that's "like a literary vacation" (Publishers Weekly). Ireland is a land full of charm and conflict, a country that in just a few decades has gone from being a poor, semi-theocratic society to a thriving economy free from the influence of the Catholic Church. With the 1998 peace agreements, the conflict between nationalists and unionists seemed, if not resolved, at least dormant. But Brexit—with the ambiguous position it leaves Northern Ireland in—caused old tensions to resurface, with ramifications in politics, society, culture, and sport. Meanwhile, south of the border, epochal transformation has seen a deeply patriarchal, conservative society give space to diversity, the only country in the world to enshrine gay marriage in law through a referendum. And there's a whole other Ireland abroad, an Irish diaspora that looks to the old country with newfound pride but doesn't forget the ugliness it fled from. Memory and identity intertwine with the transformations—from globalization to climate change—that are remodeling the Irish landscape, from the coastal communities under threat of disappearing along with the Irish language fishermen use to talk about the sea, inland the peat bogs, until recently important sources of energy and jobs, are being abandoned. Pieces in this collection include: *The mass is ended* by Catherine Dunne and Caelainn Hogan · *The Way Back* by Colum McCann · *A Trip to Westeros* by Mark O'Connell · Plus: life on the margins of two unions and right in the middle of Brexit, making war on each other for thirty years while playing on the same national rugby team, emigrating to the great enemy or transforming the country one referendum at a time, digging peat bogs and building cottages, talking of the sea in Gaelic, and much more . . . "These books are so rich and engrossing that it is rewarding to read them even when one is stuck at home." —The Times Literary Supplement

The First Dinosaur Ian Lendler 2019-10-08 A Kirkus Reviews Best Middle Grade Book of 2019 An Orbis Picture Recommended Title "An outstanding case study in how science is actually done: funny, nuanced, and perceptive." —Kirkus Reviews (starred review) Join early scientists as they piece together one of humanity's greatest puzzles—the fossilized bones of the first dinosaur! Dinosaurs existed. That's a fact we accept today. But not so long ago, the concept that these giant creatures could have roamed Earth millions of years before humans was unfathomable. People thought what we know as dinosaur bones were the bones of giant humans. Of large elephants. Of angels, even. So, how did we get from angel wings to the T-Rex? *The First Dinosaur* tells the story of the idea of dinosaurs, and the chain of fossil discoveries and advances in science that led to that idea. Dinosaur Artist Paige Williams 2018-09-13 "In 2012, a New York City auction made an unusual offering: 'a superb Tyrannosaurus skeleton'. In fact, Lot 49135 consisted of a nearly complete T. bataar, a close cousin to T. rex, the most famous animal that ever lived. The fossils now on display in Manhattan had been unearthed in Mongolia, some 6,000 miles away. At 8 feet high and 24 feet long, the specimen was spectacular, and the final gavel signalled a winning bid of well over \$1 million. Eric Prokopi, a thirty-eight-year-old Floridian, was the man who had brought this extraordinary skeleton to market. A onetime swimmer who spent his teenage years searching for shark teeth, Prokopi's singular obsession with fossils generated a thriving business hunting, preparing, and selling specimens, to clients ranging from natural history museums to avid private collectors like actor

Leonardo DiCaprio. But there was a problem. This time, facing financial strain, had Prokopi gone too far? As the T. bataar went to auction, a network of paleontologists alerted the government of Mongolia to the eye-catching lot. As an international custody battle ensued, fuelled by geopolitics, Prokopi watched as his own world unravelled. In the tradition of *The Orchid Thief*, *The Dinosaur Artist* is a stunning work of narrative journalism about humans' relationship with natural history and a seemingly intractable conflict between science and commerce. A story that stretches from Florida's Land O' Lakes to the Gobi Desert, *The Dinosaur Artist* illuminates the history of fossil collecting - a wildly popular, yet sometimes murky, risky business, populated by eccentrics and obsessives, where the lines between poacher and hunter, collector and smuggler, enthusiast and opportunist, can easily blur. In her first book, New Yorker staff writer Paige Williams has given readers an irresistible story that spans continents, cultures, and millennia as she examines the question of who, ultimately, owns the past"--Provided by publisher.
