Mare Plasticum - The Plastic Sea Marilena Streit-Bianchi 2020-07-23 This book, written by a multidisciplinary team of authors comprising scientists, artists and communicators, explores one of the most pressing issues of our time - the menace plastics pose to marine environments and organisms. It takes readers on a journey that begins on the beaches of Galicia, where the beach litter formed the starting point for an exhibition that combines art and science to alert the audience to the urgent need for action. The journey culminates with a short "plastic story", which reveals a disturbing vision of the future significance of plastics for humans, and an example of how comics can deliver information to a younger audience. Along the way there is plenty of fascinating science, such as insights into the impacts of plastics and microplastics; the new marine ecosystem, known as the "plastisphere"; and the current status of the oceans, from the Arctic to the Mediterranean. The book also explores the historical developments; sustainable solutions, including the use of circular economy methodologies; and protective measures, like those being tried in China and the Far East. Lastly, it describes the role played by rivers as transport vectors for plastic, with special reference to the Danube, and to complete the picture, since most of the plastic is of terrestrial origin, it investigates problems related to microplastics in soils.

A Briefer History of Time Stephen Hawking 2008-05-13 #1 NEW YORK TIMES BESTSELLING AUTHORS The science classic made more accessible • More concise • Illustrated FROM ONE OF THE MOST BRILLIANT MINDS OF OUR TIME COMES A BOOK THAT CLARIFIES HIS MOST IMPORTANT IDEAS Stephen Hawking's worldwide bestseller A Brief History of Time remains a landmark volume in scientific writing. But for years readers have asked for a more accessible formulation of its key concepts—the nature of space and time, the role of God in creation, and the history and future of the universe. A Briefer History of Time is Professor Hawking's response. Although "briefer," this book is much more than a mere explanation of Hawking's earlier work. A Briefer History of Time both clarifies and expands on the great subjects of the original, and records the latest developments in the field—from string theory to the search for a unified theory of all the forces of physics. Thirty-seven full-color illustrations enhance the text and make A Briefer History of Time an exhilarating and must-have addition in its own right to the great literature of science and ideas.

Geometry of the Passions Remo Bodei 2018-08-08 The passions have long been condemned as a creator of disturbance and purveyor of the temporary loss of reason, but as Remo Bodei argues in *Geometry of the Passions*, we must abandon the perception that order and disorder are in a constant state of collision. By means of a theoretical and historical analysis, Bodei interprets the relationship between passion and reason as a conflict between two complementary logics. *Geometry of the Passions* investigates the paradoxical conflict-collaboration between passions and reason, and between individual and political projects. Tracing the roles passion and reason have played throughout history, including in the political agendas of Descartes, Hobbes, and the French Jacobins, *Geometry of the Passions* reveals how passion and reason may be used as a vehicle for affirmation rather than self-enslavement.

The Universe Before the Big Bang Maurizio Gasperini 2008-10-08 Terms such as "expanding Universe", "big bang", and "initial singularity", are nowadays part of our common language. The idea that the Universe we observe today originated from an enormous explosion (big bang) is now well known and widely accepted, at all levels, in modern popular culture. But what happens to the Universe before the big bang? And would it make any sense at all to ask such a question? In fact, recent progress in theoretical physics, and in particular in String Theory, suggests answers to the above questions, providing us with mathematical tools able in principle to reconstruct the history of the Universe even for times before the big bang. In the emerging cosmological scenario the Universe, at the epoch of the big bang, instead of being a "new born baby" was actually a rather "aged" creature in the middle of its possibly infinitely enduring evolution. The aim of this book is to convey this picture in non-technical language accessible also to non-specialists. The author, himself a leading cosmologist, draws attention to ongoing and future observations that might reveal relics of an era before the big bang.

The Century of Space Science J.A. Bleeker 2012-12-06 One of the most attractive features of the young discipline of Space Science is that many of the original pioneers and key players involved are still available to describe their field. Hence, at this point in history we are in a unique position to gain first-hand insight into the field and its development. To this end, *The Century of Space Science*, a scholarly, authoritative, reference book presents a chapter-by-chapter retrospective of space science as studied in the 20th century. The level is academic and focuses on key discoveries, how these were arrived at, their scientific consequences and how these discoveries advanced the thoughts of the key players involved. With over 90 world-class contributors, such as James Van Allen, Cornelis de Jager, Eugene Parker, Reimar Lüst, and Ernst Stuhlinger, and with a Foreword by Lodewijk Woltjer (past ESO Director General), this book will be immensely useful to readers in the fields of space science, astronomy, and the history of science. Both academic institutions and researchers will find that this major reference work makes an invaluable addition to their collection.

The Extraordinary Story of Life on Earth Piero Angela 1996 Condenses four billion years into a single year, making it easier to assess the relative distances between major events and the duration of each evolutionary era.

Cosmic Catastrophes J. Craig Wheeler 2007-01-04 From supernovae and gamma-ray bursts to the accelerating Universe, this is an exploration of the intellectual threads that lead to some of the most exciting ideas in modern astrophysics and cosmology. This fully updated second edition incorporates new material on binary stars, black holes, gamma-ray bursts, worm-holes, quantum gravity and string theory. It covers the origins of stars and their evolution, the mechanisms responsible for supernovae, and their progeny, neutron stars and black holes. It examines the theoretical ideas behind black holes and their manifestation in observational astronomy and presents neutron stars in all their variety known today. This book also covers the physics of the twentieth century, discussing quantum theory and Einstein's gravity, how these two theories collide, and the prospects for their reconciliation in the twenty-first century. This will be essential reading for undergraduate students in astronomy and astrophysics, and an excellent, accessible introduction for a wider audience.

The Earth Chronicles Expeditions Zecharia Sitchin 2007-05-29 Reveals the course of archaeological adventures and insights that resulted in The Earth Chronicles series • Explores links between the Old world and the New in search of evidence of extraterrestrial gods in the artifacts and murals of ancient civilizations • Reveals archaeological cover-ups concerning Olmec origins in Mexico and ancient UFO artifacts in Turkey In this autobiographical book, the internationally acclaimed author Zecharia Sitchin reveals the foundational research and the adventurous expeditions that resulted in his writing the bestselling The Earth Chronicles series. Ranging from Mayan temples in Mexico to hidden artifacts in Istanbul, Turkey, from biblical tunnels in Jerusalem to the mysteries of Mt. Sinai, from the abode of a Sumerian goddess to Greek islands, the Expeditions' destinations and amazing discoveries unmasked established fallacies, detected the fate of mysterious artifacts, and revealed ancient connections to modern space facilities. For the first time, Sitchin shares with the reader not only his encompassing knowledge of antiquity and his field experiences, but also the concrete evidence for his conclusions that ancient myths were recollections of factual events, that the gods of ancient peoples were visitors to Earth from another planet, and that we are not alone in our own solar system. Accompanied by photographs from his personal archive, here is Sitchin's own story and his inner feelings about the cord that binds him to his ancestral past.

Strangled in Paris Claude Izner 2013-09-03 Investigating the murder of a well-dressed masked woman whose body was found with a unicorn pendant, newly married bookseller Victor Legris finds the case complicated by two additional murders and links to an organization dedicated to finding the philosopher's stone. By the authors of *In the Shadow of Paris*.

The Notebook Jose Saramago 2011-05-01 Thought-provoking and lyrical, *The Notebook* records the last year in the life of José Saramago. In these pages, beginning on the eve of the 2008 US presidential election, he evokes life in his beloved city of Lisbon, revisits conversations with friends, and meditates on his favorite authors. Precise observations and moments of arresting significance are rendered with pointillist detail, and together demonstrate an acute understanding of our times. Characteristically critical and uncompromising, Saramago dissects the financial crisis, deplors Israel's punishment of Gaza, and reflects on the rise of Barack Obama. *The Notebook* is a unique journey into the personal and political world of one of the greatest writers of our time.

If the Universe Is Teeming with Aliens ... WHERE IS EVERYBODY? Stephen Webb 2002-10-04 In a 1950 conversation at Los Alamos, four world-class scientists generally agreed, given the size of the Universe, that advanced extraterrestrial civilizations must be present. But one of the four, Enrico Fermi, asked, "If these civilizations do exist, where is everybody?" Given the fact that there are perhaps 400 million stars in our Galaxy alone, and perhaps 400 million galaxies in the Universe, it stands to reason that somewhere out there, in the 14 billion-year-old cosmos, there is or once was a civilization at least as advanced as our own. Webb discusses in detail the 50 most cogent and intriguing solutions to Fermi's famous paradox.

Tlön, Uqbar, Orbis Tertius Jorge Luis Borges 1983 'Here is a handsome edition of one of Borges' fictions, in a translation first published in *Labyrinths* in 1962. It's an important story in the Borges' canon, incorporating most of the author's philosophical and esthetic preoccupations in a typically brief compass. With great solemnity and a convincing array of scholarly detail (including annotated references to imaginary books and articles), Borges concocts a fable of an alternate world and its infiltration of our own. The reality of Tlon is idealist: material objects have no existence; language has no nouns; its principal discipline is psychology, since its inhabitants see the universe as nothing but a series of mental processes. A series of 24 illustrations accompanies the text. Their disturbing resemblances to our reality make them appropriate reflections of Borges's imaginative constructs.' -- *The Kingston Whig-Standard*

Bacchai Euripides, 2012-05-28 Dionysos, the God of wine and theatre has returned to his native land to take revenge on the puritanical Pentheus who refuses to recognise him of his rites. Remorselessly, savagely and with black humour, the God drives Pentheus and all the city to their shocking fate. This version was specially commissioned by the National Theatre for a production in May 2002, directed by Sir Peter Hall and scored by Sir Harrison Birtwhistle.

The Hieroglyphic Monad John Dee 2000-01-01 Written in thirteen days in 1564 by the renowned Elizabethan magus, Dr. John Dee, *The Hieroglyphic Monad* explains his discovery of the monas, or unity, underlying the universe as expressed in a hieroglyph, or symbol. Dee called *The Hieroglyphic Monad* a "magical parable" based on the Doctrine of Correspondences which lies at the heart of all magical practice and is the key to the hermetic quest. Through careful meditation and study of the glyph, its secrets may be slowly revealed.

How to Think Like Stephen Hawking Daniel Smith 2016-05-26 A unique insight into the mind of one of the world's most extraordinary thinkers. Undoubtedly the most famous scientist on the planet and the very face of physics over the last half-century, Stephen Hawking is remarkable for many reasons. Not least because he has continued to strive to achieve so much while being hamstrung by debilitating illness. He has demonstrated categorically that if you put your mind to it, you can achieve anything, no matter your physical state. Of course, it helps if you happen to possess a mind such as his. His work on black holes put him on the map, and he became globally famous for his *A Brief History of Time*, communicating the most difficult scientific ideas at a period when he'd lost the ability to speak. *How to Think Like Stephen Hawking* reveals the key motivations, desires and philosophies that make Hawking one of the world's most enduring talents. Studying how he overcame great adversity, fought his demons as well as his detractors and looked back to the origins of the universe, with quotes and passages by and about him, you too can learn to think like the man who claims he can think in eleven dimensions.

The Invincible Stanislaw Lem 2020-02-18 A space cruiser, in search of its sister ship, encounters beings descended from self-replicating machines. In the grand tradition of H. G. Wells and Jules Verne, Stanislaw Lem's *The Invincible* tells the story of a space cruiser sent to an obscure planet to determine the fate of a sister spaceship whose communication with Earth has abruptly ceased. Landing on the planet Regis III, navigator Rohan and his crew discover a form of life that has apparently evolved from autonomous, self-replicating machines—perhaps the survivors of a "robot war." Rohan and his men are forced to confront the classic quandary: what course of action can humanity take once it has reached the limits of its knowledge? In *The Invincible*, Lem has his characters confront the inexplicable and the bizarre: the problem that lies just beyond analytical reach.

Giordano Bruno and the Geometry of Language Arielle Saiber 2017-03-02 *Giordano Bruno and the Geometry of Language* brings to the fore a sixteenth-century philosopher's role in early modern Europe as a bridge between science and literature, or more specifically, between the spatial paradigm of geometry and that of language. Arielle Saiber examines how, to invite what Bruno believed to be an infinite universe—its qualities and vicissitudes—into the world of language, Bruno forged a system of 'figurative' vocabularies: number, form, space, and word. This verbal and symbolic system in which geometric figures are seen to underlie rhetorical figures, is what Saiber calls 'geometric rhetoric.' Through analysis of Bruno's writings, Saiber shows how Bruno's writing necessitates a crafting of space, and is, in essence, a lexicon of spatial concepts. This study constitutes an original contribution both to scholarship on Bruno and to the fields of early modern scientific and literary studies. It also addresses the broader question of what role geometry has in the formation of any language and literature of any place and time.

Then his friends being dying one by one and he slowly realizes that an unspeakable evil has been unleashed. As Barbee's world crumbles around him in a dizzying blizzard of madness, the intoxicating, dangerous April pushes Barbee ever closer to the answer to the question "Who is the Child of Night?" When Barbee finds out, he'll wish he'd never been born.

The Journey of the Mind to God Saint Bonaventure (Cardinal) 1993-01-01 The Hackett edition of this classic of medieval philosophy and mysticism--a plan of pilgrimage for the learned Franciscan wishing to reach the apex of the mystical experience--combines the highly regarded Boehner translation with a new introduction by Stephen Brown focusing on St. Francis as a model of the contemplative life, the meaning of the *Itinerarium*, its place in Bonaventure's mystical theology, and the plan of the work. Boehner's Latin Notes, as well as Latin texts from other works of Bonaventure included in the Franciscan Institute Edition, are rendered here in English, making this the edition of choice for the beginning student.

Asimov's Guide to Science Isaac Asimov 1979

Galileo in Rome William R. Shea 2004-10-21 Galileo's trial by the Inquisition is one of the most dramatic incidents in the history of science and religion. Today, we tend to see this event in black and white--Galileo all white, the Church all black. *Galileo in Rome* presents a much more nuanced account of Galileo's relationship with Rome. The book offers a fascinating account of the six trips Galileo made to Rome, from his first visit at age 23, as an unemployed mathematician, to his final fateful journey to face the Inquisition. The authors reveal why the theory that the Earth revolves around the Sun, set forth in Galileo's *Dialogue*, stirred a hornet's nest of theological issues, and they argue that, despite these issues, the Church might have accepted Copernicus if there had been solid proof. More interesting, they show how Galileo dug his own grave. To get the imprimatur, he brought political pressure to bear on the Roman Censor. He disobeyed a Church order not to teach the heliocentric theory. And he had a character named Simplicio (which in Italian sounds like simpleton) raise the same objections to heliocentrism that the Pope had raised with Galileo. The authors show that throughout the trial, until the final sentence and abjuration, the Church treated Galileo with great deference, and once he was declared guilty commuted his sentence to house arrest. Here then is a unique look at the life of Galileo as well as a strikingly different view of an event that has come to epitomize the Church's supposed antagonism toward science.

The Fabric of the Cosmos Brian Greene 2007-12-18 NATIONAL BESTSELLER • From one of the world's leading physicists and author of the Pulitzer Prize finalist *The Elegant Universe*, comes "an astonishing ride" through the universe (The New York Times) that makes us look at reality in a completely different way. Space and time form the very fabric of the cosmos. Yet they remain among the most mysterious of concepts. Is space an entity? Why does time have a direction? Could the universe exist without space and time? Can we travel to the past? Greene has set himself a daunting task: to explain non-intuitive, mathematical concepts like String Theory, the Heisenberg Uncertainty Principle, and Inflationary Cosmology with analogies drawn from common experience. From Newton's unchanging realm in which space and time are absolute, to Einstein's fluid conception of spacetime, to quantum mechanics' entangled arena where vastly distant objects can instantaneously coordinate their behavior, Greene takes us all, regardless of our scientific backgrounds, on an irresistible and revelatory journey to the new layers of reality that modern physics has discovered lying just beneath the surface of our everyday world.

In the Beginning Isaac Asimov 2014-08-12 In the Beginning: Science Faces God in the Book of Genesis. The beginning of time. The origin of life. In our Western civilization, there are two influential accounts of beginnings. One is the biblical account, compiled more than two thousand years ago by Judean writers who based much of their thinking on the Babylonian astronomical lore of the day. The other is the account of modern science, which, in the last century, has slowly built up a coherent picture of how it all began. Both represent the best thinking of their times, and in this line-by-line annotation of the first eleven chapters of Genesis, Isaac Asimov carefully and evenhandedly compares the two accounts, pointing out where they are similar and where they are different. "There is no version of primeval history, preceding the discoveries of modern science, that is as rational and as inspiring as that of the Book of Genesis," Asimov says. However, human knowledge does increase, and if the biblical writers "had written those early chapters of Genesis knowing what we know today, we can be certain that they would have written it completely differently." Isaac Asimov brings to this fascinating subject his wide-ranging knowledge of science and history--and his award-winning ability to explain the complex with accuracy, clarity, and wit.

Literature and the Gods Roberto Calasso 2010-06-16 Brilliant, inspired, and gloriously erudite, *Literature and the Gods* is the culmination of Roberto Calasso's lifelong study of the gods in the human imagination. By uncovering the divine whisper that lies behind the best poetry and prose from across the centuries, Calasso gives us a renewed sense of the mystery and enchantment of great literature. From the banishment of the classical divinities during the Age of Reason to their emancipation by the Romantics and their place in the literature of our own time, the history of the gods can also be read as a ciphered and splendid history of literary inspiration. Rewriting that story, Calasso carves out a sacred space for literature where the presence of the gods is discernible. His inquiry into the nature of "absolute literature" transports us to the realms of Dionysus and Orpheus, Baudelaire and Mallarmé, and prompts a lucid and impassioned defense of poetic form, even when apparently severed from any social function. Lyrical and assured, *Literature and the Gods* is an intensely engaging work of literary affirmation that deserves to be read alongside the masterpieces it celebrates.

Mimesis Erich Auerbach 1991

The synchro energy project, beyond the holographic universe Fausto Intilla 2008-01-01 "Questo volume include una descrizione dei primi risultati sperimentali relativi al Synchro Energy Project, un progetto nato circa due anni fa (2006), il cui obiettivo era quello di giungere ad una teoria in grado di unificare i concetti di Sincronicità (Junghiana), Non-Località e Collasso della funzione d'onda. Gli esperimenti sono stati condotti in un piccolo laboratorio nei pressi dell'Università di Losanna (Svizzera), con la collaborazione di Patrick Reiner (fisico teorico, PhD), Jean-Michel Bonnet (ingegnere elettronico, PhD) e Christine Duval (neuropsicologa e fisiologa). Questo libro quindi, espone e spiega per la prima volta, le basi teoriche e sperimentali a sostegno del "Principio di compensazione quantistica dei nuclei inconsci". Esso dona al lettore attento, degli ottimi spunti di riflessione relativi ad un ambito scientifico, ancora non completamente esplorato: quello sull'interazione tra psiche e materia. "

The Celestial Hunter Roberto Calasso 2020-04-28 A New York Times Book Review Editors' Choice "[Calasso's] flow of associations leaves you feeling not out of your depth, but smarter and better read." --The New York Times Book Review The eighth part of Roberto Calasso's monumental series on the primal forces of civilization The eighth part of Roberto Calasso's singular work in progress that began in 1983 with *The Ruin of*

Kasch, *The Celestial Hunter* is an inspired and provocative exploration of mankind's relationship with myth, the divine, and the idea of transformation. There was a time, even before prehistory, when man was simply a defenseless animal. The gods he worshiped took the form of other beasts or were the patterns of the stars he saw above him each night in the sky, which he transformed into figures and around which he created stories. Soon, however, man learned to imitate the animals that attacked him and he became a hunter. This transformation, Calasso posits, from defenseless victim to hunter was a key moment, the first step on man's ascendance to power. Suddenly the notion of the hunter became fundamental. It would be developed over thousands of years through the figures that became central to Greek mythology, including the constellations. Among them was Orion, the celestial hunter, and his dog, Sirius. Vivid and strikingly original, and expertly translated from the Italian by Richard Dixon, *The Celestial Hunter* traces how man created the divine myths that would become the cornerstones of Western civilization. As Calasso demonstrates, the repercussions of these ideas would echo through history, from Paleolithic to modern times. And they would be the product of one thing: the human mind.
