LOT-EK: Objects + Operations surveys dozens of projects—built, unbuilt and in-progress; polemical, practical, and in-between—complemented by photographs from LOT-EK's multi-year URBAN SCAN project, a vast photographic document of infrastructure and incident, as well as essays by Thomas de Monchaux and interviews with founding partners Ada Tolla and Giuseppe Lignano.

Conundrums Harry Pearce 2010-09-21 Conundrum is a mind-stretch. Encrypting idioms into their typographic equivalents, Harry enlivens our everyday language and challenges readers to see that "time after time after time" or, at least, "more often than not" "the writing is on the wall." For fans of word puzzles, sudoku, crosswords, and all manner of mind games, Conundrum offers an artfully packaged, cleverly designed new challenge. Drawing upon, literally in this case, graphic puzzles that he began creating as a child, Harry's developed over 100 witty conundrums for this book that will stretch the mind as well as delight the senses. A member of the Alliance Graphique Internationale, a frequent lecturer and contributor to design discourse, an internationally recognized leader in design, and a founder of Lippa Pearce, one of the UK's most respected design agencies, Harry refines the way we see and communicate. Conundrum achieves nothing less than changing how we understand and interact with language.

Designing Better Services Francesca Foglieni 2017-09-25 This book provides accessible, comprehensive guidance on service design and enables practitioners approaching the discipline for the first time to develop the strategic mindset needed to exploit its innovation potential. The opening chapters trace the origins of service design and examine its links with service innovation, as well as its strategic role in service organizations. It then offers step-by-step guidance on tackling a service design project, explaining the main design elements and indications of various useful design tools. It also introduces the topic of evaluation as a support practice in designing or redesigning better services, and providing evidence concerning the value of service design interventions. The third chapter explores how evaluation is currently approached in service design practice through the analysis of a number of case studies. Based on these experiences it extensively discusses evaluation, with a particular focus on service evaluation, and explains its importance in supporting service design and fostering innovation throughout the service design process. Further it describes pragmatic directions for setting up and conducting a service evaluation strategy. The concluding chapter uses an interpretive model to summarize the role evaluation could have in service design practice and focuses on interdisciplinary competences that need to be acquired by service designers in order to address the evolution of the discipline. The novel approach adopted in the book fosters the growing interest in design-driven service innovation and assists in realizing its full potential in both the private and the public sector.

(Re)Searching the Digital Bauhaus Thomas Binder 2008-10-08 The intent of this chapter is to outline a distinctive way of thinking about issues of technology and society that has characterized many Nordic approaches to the topic. One of the characteristics of this approach has been the recognition of the worth of human labour. Technology is not seen as an alien force, but something which is itself a product of human labour, and it can be designed and utilized in ways which augment human skills and expertise, rather than degrading them. What is particularly striking, at least to this author, in this approach is that we are presented not simply with a vision of how things could be better in our society, but with concrete exemplars of how we can build such a better world. It is in recognition of this fact that I have chosen the title of this chapter, as it emphasizes that, while the tradition of Utopian literature is the - lineation of a supposedly idea world which exists no-place (u-topos, in Greek), these visions can be an inspiration for quite practical activities on the ground, as steps towards their realization. As Wilde notes (in the quote above) this is a never-ending quest, as with each achievement, we recognize that there are further bridges to cross and places to be visited.

Materials Experience Elvin Karana 2013-10-24 There currently exists an abundance of materials selection advice for designers suited to solving technical product requirements. In contrast, a stark gap can be found in current literature that articulates the very real personal, social, cultural and

economic connections between materials and the design of the material world. In *Materials Experience: fundamentals of materials and design*, thirty-four of the leading academicians and experts, alongside 8 professional designers, have come together for the first time to offer their expertise and insights on a number of topics common to materials and product design. The result is a very readable and varied panorama on the world of materials and product design as it currently stands. Contributions by many of the most prominent materials experts and designers in the field today, with a foreword by Mike Ashby. The book is organized into 4 main themes: sustainability, user interaction, technology and selection. Between chapters, you will find the results of interviews conducted with internationally known designers. These 'designer perspectives' will provide a 'time out' from the academic articles, with emphasis placed on fascinating insights, product examples and visuals.
