CRC World Dictionary of Medicinal and Poisonous Plants Umberto Quattrocchi 2016-04-19 "Following on the successes of two previous dictionary projects, the CRC World Dictionary of Plant Names and the CRC World Dictionary of the Grasses, Umberto Quattrocchi has undertaken this dictionary of economically important plants.... He has done for these plants what was so admirably done in his other works—brought the vast and scattered literature on plant names, and in this case, too, their uses, into coherent order so that the inquisitive scholar can get a foothold." —From the Foreword, Donald H. Pfister, Harvard University and Harvard University Herbaria, Cambridge, Massachusetts The CRC World Dictionary of Medicinal and Poisonous Plants: Common Names, Scientific Names, Eponyms, Synonyms, and Etymology provides the starting point for better access to data on plants used around the world in medicine, food, and cultural practices. The material found in the five volumes has been painstakingly gathered from papers of general interest, reports and records, taxonomic revisions, field studies, herbaria and herbarium collections, notes, monographs, pamphlets, botanical literature, and literature tout court. It includes sources available at various natural history libraries, floras and standard flora works, local floras and local histories, nomenclatural histories, and the International Code of Botanical Nomenclature. Much more than a dictionary, the book provides the names of thousands of genera and species of economically important plants, concise summaries of plant properties, and appropriate observations about medicinal uses. Drawing from a tremendous range of primary and secondary sources, it is an indispensable time-saving guide for all those involved with botany, herbal medicine, pharmacognosy, toxicology, medicinal and natural product chemistry, and agriculture.

Science in the Kitchen and the Art of Eating Well Pellegrino Artusi 2003-12-27 First published in 1891, Pellegrino Artusi's La scienza in cucina e l'arte di mangiar bene has come to be recognized as the most significant Italian cookbook of modern times. It was reprinted thirteen times and had sold more than 52,000 copies in the years before Artusi's death in 1910, with the number of recipes growing from 475 to 790. And while this figure has not changed, the book has consistently remained in print. Although Artusi was himself of the upper classes and it was doubtful he had ever touched a kitchen utensil or lit a fire under a pot, he wrote the book not for professional chefs, as was the nineteenth-century custom, but for middle-class family cooks: housewives and their domestic helpers. His tone is that of a friendly advisor - humorous and nonchalant. He indulges in witty anecdotes about many of the recipes, describing his experiences and the historical relevance of particular dishes. Artusi's masterpiece is not merely a popular cookbook; it is a landmark work in Italian culture. This English edition (first published by Marsilio Publishers in 1997) features a delightful introduction by Luigi Ballerini that traces the fascinating history of the book and explains its importance in the context of Italian history and politics. The illustrations are by the noted Italian artist Giuliano Della Casa.

Ending Global Poverty Kirk Magleby 2007 Ending Global Poverty: The MicroFranchise Solution clearly explains the nature, cause, effects, and most effective solution to the most serious problem on the planet -- global poverty. So many books on solving poverty focus on big government and non-profit solutions. Many of these have failed. Poverty solutions need to drill down to those who need the help. Microfranchising is a viable solution, bringing small enterprise solutions to people in need.

Post-Colonial Transformation Bill Ashcroft 2013-04-03 In his new book, Bill Ashcroft gives us a revolutionary view of the ways in which post-colonial societies have responded to colonial control. The most comprehensive analysis of major features of post-colonial studies ever compiled, Post-Colonial Transformation: * demonstrates how widespread the strategy of transformation has been * investigates political and literary resistance * examines the nature of post-colonial societies' engagement with imperial language, history, allegory, and place * offers radical new perspectives in post-colonial theory in principles of habitation and horizontality. Post-Colonial Transformation breaks new theoretical ground while demonstrating the relevance of a wide range of theoretical practices, and extending the exploration of topics fundamentally important to the field of post-colonial studies.

Contributions to Statistical Analysis Rafael Hernandez-Nieto 2002-07 In this work, two new coefficients have been proposed: the Coefficient of Proportional Variance (Cpv) and the Coefficient of Content Validity (Ccv). The Coefficient of Proportional Variance proposes a solution to the problem of measuring and evaluating the relative variability of a given distribution, obviating the problems of subjective interpretation and value judgments. The mathematical relationship derived from the Cpv allows for a more precise and more scientific interpretation of relative variability of data. The Coefficient of Content Validity permits the calculation of the content validity for each item, as well as the total content validity, of any data collection instrument that has been subjected to the evaluation of several judges (Panel of Experts Technique). Until now, according to the psychometric and statistical literature, a quantitative estimator of the content validity of a measuring instrument had not been achieved.

At the Roots of Italian Identity Edoardo Marcello Barsotti 2021-02-10 This book investigates the relationship between the ideas of nation and race among the nationalist intelligentsia of the Italian Risorgimento and argues that ideas of race played a considerable role in defining Italian national identity. The author argues that the racialization of the Italians dates back to the early Napoleonic age and that naturalistic racialism—or race-thinking based on the taxonomies of the natural history of man—emerged well before the traditionally presumed date of the late 1860s and the advent of positivist anthropology. The book draws upon a wide number of sources including the work of Vincenzo Cuoco, Giuseppe Micali, Adriano Balbi, Alessandro Manzoni, Giandomenico Romagnosi, Cesare Balbo, Vincenzo Gioberti, and Carlo Cattaneo. Themes explored include links to antiquity on the Italian peninsula, archaeology, and race-thinking.
