Palaeopathology Tony Waldron 2020-12-10 Palaeopathology is an evidence-based guide to the principal types of pathological lesions often found in human remains and how to diagnose them. Tony Waldron presents an innovative method of arriving at a diagnosis in the skeleton by applying what he refers to as 'operational definitions'. The method ensures that those who study bones will use the same criteria for diagnosing disease, thereby enabling valid comparisons to be made between studies. Waldron's book is based on modern clinical knowledge and provides background information on the natural history of bone disease. In addition, the volume demonstrates how results from studies should be analysed, methods of determining the frequency of disease, and other types of epidemiological analysis. This edition includes new chapters on the development of palaeopathology, basic concepts, health and disease, diagnosis, and spinal pathology. Chapters on analysis and interpretation have been thoroughly revised and enlarged.

Statistics for Archaeologists Robert D. Drennan 2013-06-29 This book is intended as an introduction to basic statistical principles and techniques for the archaeologist. It grows primarily from my experience in teaching courses in quantitative analysis for undergraduate and graduate students in archaeology over a number of years. The book is set specifically in the context of archaeology, not because the issues dealt with are uniquely archaeological in nature, but because many people find it much easier to understand quantitative analysis in a familiar context—one in which they can readily understand the nature of the data and the utility of the techniques. The principles and techniques, however, are all of much broader applicability. Physical anthropologists, cultural anthropologists, sociologists, psychologists, political scientists, and specialists in other fields make use of these same principles and techniques. The particular mix of topics, the relative emphasis given them, and the exact approach taken here, however, do reflect my own view of what is most useful in the analysis of specifically archaeological data. It is impossible to fail to notice that many aspects of archaeological information are numerical and that archaeological analysis has an unavoidably quantitative component. Standard statistical approaches are commonly applied in straightforward as well as unusual and ingenious ways to archaeological problems, and new approaches have been invented to cope with the special quirks of archaeological analysis. The literature on quantitative analysis in archaeology has grown to prodigious size in the past 25 or 30 years.

Pottery in Archaeology Clive Orton 2013-05-13 This revised edition provides an up-to-date account of the many different kinds of information that can be obtained through the archaeological study of pottery. It describes the scientific and quantitative techniques that are now available to the archaeologist, and assesses their value for answering a range of archaeological questions. It provides a manual for the basic handling and archiving of excavated pottery so that it can be used as a basis for further studies. The whole is set in the historical context of the ways in which archaeologists have sought to gain evidence from pottery and continue to do so. There are case studies of several approaches and techniques, backed up by an extensive bibliography.

The Ancient Mediterranean Trade in Ceramic Building Materials: A Case Study in Carthage and Beirut Philip Mills 2013-02-15 This study addresses the level of interregional trade of ceramic building material (CBM), traditionally seen as a high bulk low value commodity, within the ancient Mediterranean between the third century BC and the seventh century AD.

Prehistoric Pottery for the Archaeologist Alex M. Gibson 1997-01-01 The first general handbook and reference guide for the study of British prehistoric pottery has now been revised and updated for a second edition. The work contains a thorough survey of the chronological development of pottery throughout prehistory and into the Roman period, as well as chapters on the development of pottery studies (from both typological and scientific viewpoints) and on the materials and methods used for the manufacture of pottery. The main part of the book is an extensively illustrated glossary in which pottery styles and types, materials and technology are explained in detail. Much of the data contained has been yielded by the authors' personal research projects, including microscopy and experimental studies and fieldwork with contemporary traditional potters.

Quantitative Methods in Archaeology Using R David L. Carlson 2017-06-26 The first step-by-step guide to the quantitative analysis of archaeological data using the R statistical computing system.

Ceramics and Society Valentine Roux 2019-02-14 Pottery is the most ubiquitous find in most historical archaeological excavations and serves as the basis for much research in the discipline. But it is not only its frequency that makes it a prime dataset for such research, it is also that pottery embeds many dimensions of the human experience, ranging from the purely technical to the eminently symbolic. The aim of this book is to provide a cutting-edge theoretical and methodological framework, as well as a practical guide, for archaeologists, students and researchers to study ceramic assemblages. As opposed to the conventional typological approach, which focuses on vessel shape and assumed function with the main goal of establishing a chronological sequence, the proposed framework is based on the technological approach. Such an approach utilizes the concept

of chaîne opératoire, which is geared to an anthropological interpretation of archaeological objects. The author offers a sound theoretical background accompanied by an original research strategy whose presentation is at the heart of this book. This research strategy is presented in successive chapters that are geared to explain not only how to study archaeological assemblages, but also why the proposed methods are essential for achieving ambitious interpretive goals. In the heated debate on the equation stating that “pots equal people”, which is a rather fuzzy reference to assumed relationships between (mostly) ethnic groups and pottery, technology enables us to propose with conviction the equation “pots equal potters”. In this way, a well-founded history of potters is able to achieve a much better cultural and anthropological understanding of ancient societies.

Medieval Archaeology Chris Gerrard 2003-10-04 Chris Gerrard looks at the people and excavations that have been important in medieval archaeology and the core theory and methodology used, creating an essential text for all medieval archaeologists.

Creativity in the Bronze Age Lise Bender Jørgensen 2018-01-18 Creativity is an integral part of human history, yet most studies focus on the modern era, leaving unresolved questions about the formative role that creativity has played in the past. This book explores the fundamental nature of creativity in the European Bronze Age. Considering developments in crafts that we take for granted today, such as pottery, textiles, and metalwork, the volume compares and contrasts various aspects of their development, from the construction of the materials themselves, through the production processes, to the design and effects deployed in finished objects. It explores how creativity is closely related to changes in material culture, how it directs responses to the new and unfamiliar, and how it has resulted in changes to familiar things and practices. Written by an international team of scholars, the case studies in this volume consider wider issues and provide detailed insights into creative solutions found in specific objects.

The Oxford Handbook of Egyptology Ian Shaw 2020-11-10 The Oxford Handbook of Egyptology offers a comprehensive survey of the entire study of ancient Egypt from prehistory through to the end of the Roman period. It seeks to place Egyptology within its theoretical, methodological, and historical contexts, indicating how the subject has evolved and discussing its distinctive contemporary problems, issues, and potential. Transcending conventional boundaries between archaeological and ancient textual analysis, the volume brings together 63 chapters that range widely across archaeological, philological, and cultural sub-disciplines, highlighting the extent to which Egyptology as a subject has diversified and stressing the need for it to seek multidisciplinary methods and broader collaborations if it is to remain contemporary and relevant. Organized into ten parts, it offers a comprehensive synthesis of the various sub-topics and specializations that make up the field as a whole, from the historical and geographical perspectives that have influenced its development and current characteristics, to aspects of museology and conservation, and from materials and technology - as evidenced in domestic architecture and religious and funerary items - to textual and iconographic approaches to Egyptian culture. Authoritative yet accessible, it serves not only as an invaluable reference work for scholars and students working within the discipline, but also as a gateway into Egyptology for classicists, archaeologists, anthropologists, sociologists, and linguists.

Sampling in Archaeology Clive Orton 2000-05-11 The first overview of sampling for archaeologists

for over twenty years, this manual offers a comprehensive account of the applications of statistical sampling theory which are essential to modern archaeological practice at a range of scales, from the regional to the microscopic. Bringing archaeologists up to date with an aspect of their work which is often misunderstood, it includes a discussion of the relevance of sampling theory to archaeological interpretation, and considers its fundamental place in fieldwork and post-excavation study. It demonstrates the vast range of techniques that are available, only some of which are widely used by archaeologists. A section on statistical theory also reviews latest developments in the field, and the formal mathematics is available in an appendix, cross-referenced with the main text.

Materiality, Techniques and Society in Pottery Production Daniel Albero Santacreu 2014-01-01 Daniel Albero Santacreu presents a wide overview of certain aspects of the pottery analysis and summarizes most of the methodological and theoretical information currently applied in archaeology in order to develop wide and deep analysis of ceramic pastes. The book provides an adequate framework for understanding the way pottery production is organised and clarifies the meaning and role of the pottery in archaeological and traditional societies. The goal of this book is to encourage reflection, especially by those researchers who face the analysis of ceramics for the first time, by providing a background for the generation of their own research and to formulate their own questions depending on their concerns and interests. The three-part structure of the book allows readers to move easily from the analysis of the reality and ceramic material culture to the world of the ideas and theories and to develop a dialogue between data and their interpretation. Daniel Albero Santacreu is a Lecturer Assistant in the University of the Balearic Islands, member of the Research Group Arqueo UIB and the Ceramic Petrology Group. He has carried out the analysis of ceramics from several prehistoric societies placed in the Western Mediterranean, as well as the study of handmade pottery from contemporary ethnic groups in Northeast Ghana.

The Oxford Handbook of Archaeological Ceramic Analysis Alice M. W. Hunt 2017 This volume draws together topics and methodologies essential for the socio-cultural, mineralogical, and geochemical analysis of archaeological ceramic, one of the most complex and ubiquitous archaeomaterials in the archaeological record. It provides an invaluable resource for archaeologists, anthropologists, and archaeological materials scientists.

Thin Section Petrography, Geochemistry and Scanning Electron Microscopy of Archaeological Ceramics Patrick Sean Quinn 2022-08-31 Thin section petrography, geochemistry, scanning electron microscopy and X-ray diffraction are key scientific methods used to investigate the raw materials, origins and production technology of archaeological pottery, ceramic building materials, ancient refractories and plaster. Using over 400 colour figures of a diverse range of artefact types and archaeological periods from 50 countries worldwide, this book outlines the mineralogical, chemical and microstructural composition of ancient ceramics and provides comprehensive guidelines for their scientific study within archaeology. The core of the book is dedicated to the versatile approach of ceramic petrography. This is complimented by a detailed account of the principles of bulk instrumental geochemistry, as well as the SEM microanalysis and

XRD characterisation of ceramics. The book is intended as a reference manual for research as well as a course text for specialist training on scientific ceramic analysis.

Pottery Analysis, Second Edition Prudence M. Rice 2015-07-09 Just as a single pot starts with a lump of clay, the study of a piece's history must start with an understanding of its raw materials. This principle is the foundation of *Pottery Analysis*, the acclaimed sourcebook that has become the indispensable guide for archaeologists and anthropologists worldwide. By grounding current research in the larger history of pottery and drawing together diverse approaches to the study of pottery, it offers a rich, comprehensive view of ceramic inquiry. This new edition fully incorporates more than two decades of growth and diversification in the fields of archaeological and ethnographic study of pottery. It begins with a summary of the origins and history of pottery in different parts of the world, then examines the raw materials of pottery and their physical and chemical properties. It addresses ethnographic and ethnoarchaeological perspectives on pottery production; reviews the methods of studying pottery's physical, mechanical, thermal, mineralogical, and chemical properties; and discusses how proper analysis of artifacts can reveal insights into their culture of origin. Intended for use in the classroom, the lab, and out in the field, this essential text offers an unparalleled basis for pottery research.

Zooarchaeology Elizabeth J. Reitz 2008-01-14 This is an introductory text for students interested in identification and analysis of animal remains from archaeological sites. The emphasis is on animals whose remains inform us about the relationship between humans and their natural and social environments, especially site formation processes, subsistence strategies, the processes of domestication, and paleoenvironments. Examining examples from all over the world, from the Pleistocene period up to the present, this volume is organized in a way that is parallel to faunal study, beginning with background information, bias in a faunal assemblage, and basic zooarchaeological methods. This revised edition reflects developments in zooarchaeology during the past decade. It includes sections on enamel ultrastructure and incremental analysis, stable isotopes and trace elements, ancient genetics and enzymes, environmental reconstruction, people as agents of environmental change, applications of zooarchaeology in animal conservation and heritage management, and a discussion of issues pertaining to the curation of archaeofaunal materials.

Analytical Chemistry in Archaeology A. M. Pollard 2007-01-18 This manual introduces the basic concepts of chemistry behind scientific analytical techniques and reviews their application to archaeology. It is an essential tool for students of archaeology that explains key terminology and outlines the procedures to be followed in order to produce good data.

A Standard for Pottery Studies in Archaeology Alistair Barclay 2016

Roman Finds Richard Hingley 2007-04-10 Studies on finds in Roman Britain and the Western Provinces have come to greater prominence in the literature of recent years. The quality of such work has also improved, and is now theoretically informed, and based on rich data-sets. Work on finds over the last decade or two has changed our understanding of the Roman era in profound ways, and yet despite such encouraging advances and such clear worth, there has to date, been little in the way of a dedicated forum for the presentation and evaluation of current approaches to the study of material culture. The conference at which these papers were initially presented has gone some way to redressing this, and these papers bring the very latest studies on Roman finds to a wider audience. Twenty papers are here presented covering various themes.

Stylistic Variation in Prehistoric Ceramics Stephen Plog 1980-11-28 Plog argues that there are many more factors that cause design or stylistic variations on prehistoric artifacts than have been previously acknowledged. Using data primarily from the American Southwest, he shows why the methods of design analysis that have been used are often inappropriate, and presents a new framework of explanation.

Archaeological and Historic Pottery Production Sites Harriet White 2015-10-14 This document provides practical guidance on how to investigate sites where pottery production has taken place. It describes how to anticipate and locate pottery production sites and the types of evidence that may be found. This document also provides advice on the available methods and strategies for examining,

recording and sampling features and finds of various types at each stage of the work. The different techniques for establishing the date of pottery production, and for characterising the products of a site, are given particular emphasis. This document was compiled by Harriet White, Sarah Paynter and Duncan Brown with contributions by Joanne Best, Chris Cumberpatch, David Dawson, Peter Ellis, Jane Evans, Laurence Jones, Oliver Kent, Gareth Perry, The Prince's Regeneration Trust, Ian Roberts, Kerry Tyler and Ann Woodward.

Field Methods and Post-Excavation Techniques in Late Antique Archaeology 2016-04-26 Late antique sites are often excavated badly and are hardly ever published in full, especially in the East. This volume seeks to provide a critique of this situation and exemplars of best practice. It will be an important reference work for scholars engaged in fieldwork and those seeking to use archaeological evidence in historical discussions.

Ceramic Theory and Cultural Process Dean E. Arnold 1988-06-16 A theory of ceramics that elucidates the complex relationship between culture, pottery and society.

Roman Pottery in the Archaeological Record J. Theodore Peña 2007-04-30 This book examines how Romans used their pottery and the implications of these practices on the archaeological record. It is organized around a flow model for the life cycle of Roman pottery that includes a set of eight distinct practices: manufacture, distribution, prime use, reuse, maintenance, recycling, discard, reclamation. J. Theodore Peña evaluates how these practices operated, how they have shaped the archaeological record, and the implications of these processes on archaeological research through the examination of a wide array of archaeological, textual, representational and comparative ethnographic evidence. The result is a rich portrayal of the dynamic that shaped the archaeological record of the ancient Romans that will be of interest to archaeologists, ceramicists, and students of material culture.

Pottery in Archaeology Clive Orton 1993-05-13 A 'state of the art' guide to pottery analysis providing information on recent scientific developments and the latest statistical techniques.

Ancient Landscapes of Zoara II Konstantinos D. Politis 2022-12-09 *Ancient Landscapes of Zoara II* reveals the unique set of objects discovered through the meticulous excavations at the Ghor as-Safi in Jordan. Some of them are unique works of art, but others are no less valuable for the knowledge they hold. Complementing the previous volume *Ancient Landscapes of Zoara I*, this book explores Ghor as-Safi's ancient history and archaeology through the material remains found during excavations. The finds described are from historical periods and include unpublished early Christian and Aramaic inscriptions as well as Arabic writing and graffiti. Newly discovered mosaic pavements are presented along with other noteworthy finds such as glazed imported wares, local industrial pottery, fine glass, an array of coins and specialised metal work. Animal and plant remains testify to varied and rich agricultural regimes which sustained the prosperity of ancient communities. In turn, this affluence seems to have led to a fairly sophisticated and literate society in an otherwise rather desolate environment. Studies on the human remains affirm a robust population. *Ancient Landscapes of Zoara II*, as with the previous volume, is aimed at students and researchers of the archaeology of the Near East and the southern Levant in particular. It is also of interest to readers wishing to further their understanding of the region's medieval cultures, with a focus on material finds from archaeological excavations belonging to the Byzantine and Islamic periods.

Imperial Horizons of the Silk Roads Branka Franicevic 2023-07-20 This volume centres on how the exchange routes transformed the frontier regions of the Silk Road. In doing so, it utilises a range of methods to reach an archaeological interpretation of the factors that linked people with the environment; movements, settlements, and beliefs.

A Companion to the Archaeology of Early Greece and the Mediterranean, 2 Volume Set Irene S. Lemos 2020-01-09 A Companion that examines together two pivotal periods of Greek archaeology and offers a rich analysis of early Greek culture A Companion to the Archaeology of Early Greece and the Mediterranean offers an original and inclusive review of two key periods of Greek archaeology, which are typically treated separately—the Late Bronze Age and the Early Iron Age. It presents an in-depth exploration of the society and material culture of Greece and the Mediterranean, from the 14th to the early 7th centuries BC. The two-volume companion sets Aegean

developments within their broader geographic and cultural context, and presents the wide-ranging interactions with the Mediterranean. The companion bridges the gap that typically exists between Prehistoric and Classical Archaeology and examines material culture and social practice across Greece and the Mediterranean. A number of specialists examine the environment and demography, and analyze a range of textual and archaeological evidence to shed light on socio-political and cultural developments. The companion also emphasizes regionalism in the archaeology of early Greece and examines the responses of different regions to major phenomena such as state formation, literacy, migration and colonization. Comprehensive in scope, this important companion: Outlines major developments in the two key phases of early Greece, the Late Bronze Age and the Early Iron Age Includes studies of the geography, chronology and demography of early Greece Explores the development of early Greek state and society and examines economy, religion, art and material culture Sets Aegean developments within their Mediterranean context Written for students, and scholars interested in the material culture of the era, A Companion to the Archaeology of Early Greece and the Mediterranean offers a comprehensive and authoritative guide that bridges the gap between the Late Bronze Age and the Early Iron Age. 2020 CHOICE Outstanding Academic Title Winner!

The volume explores key themes in historical archaeology including documentary archaeology, the writing of historical archaeology, colonialism, capitalism, industrial archaeology, maritime archaeology, cultural resource management and urban archaeology. Three special sections explore the distinctive contributions of material culture studies, landscape archaeology and the archaeology of buildings and the household.
