Stella Marina Sandra Genovesi 2014-08-19 Marina è una stella che vive in fondo al mare. Un giorno la medusa le dice che lei partirà per un lungo viaggio verso il "mare che non c'è". Sì, perché il mare dove vive anche Marina è sporco, pieno di rifiuti mentre l'altro è pulito e pieno di pesci colorati. L'intrepida stella Marina, però, non ci sta ad abbandonare il mare dove è nata e cresciuta e insieme ai suoi amici e alle sue amiche decide di ripulirlo. Riusciranno a far capire agli esseri umani che non devono più inquinare? Una deliziosa fiaba per bambini e bambine dal nido alla scuola primaria. L'autrice affronta attraverso un linguaggio semplice il tema dell'educazione ambientale e dell'educazione alla parità di genere. Sandra Genovesi è un'educatrice di nido da diversi anni, ruolo che l'ha portata a realizzare storie per bambini e bambine. Nata e cresciuta in Versilia, durante l'infanzia quando la mamma e il babbo lavoravano, trascorreva l'estate al mare tra giochi con la sabbia e bagni interminabili, ciò è stato molto significativo e di stimolo alla scrittura di alcuni racconti. Anche l'esperienza nelle scuole dell'infanzia e nelle scuole primarie della Versilia in qualità di insegnante è stata altrettanto importante, infatti l'esperienza ludico-didattica ha caratterizzato la sua scrittura, mentre le bambine e i bambini l'hanno ispirata nella fantasia. La forma delle storie nonché le tematiche affrontate risentono in maniera accentuata dell'influenza formativa degli studi pedagogico-didattici. Cerca così di contribuire a una letteratura per l'infanzia che sia contemporaneamente leggerezza e riflessività, nella speranza di poter regalare belle emozioni e pensieri profondi.

The Atlas of Early Modern Wildlife Lee Raye 2023-07-18 What was the state of wildlife in Britain and Ireland before modern records began? The Atlas of Early Modern Wildlife looks at the era before climate change, before the intensification of agriculture, before even the Industrial Revolution. In the sixteenth to eighteenth centuries, beavers still swim in the River Ness. Isolated populations of wolves and lynxes linger in the uplands. Sea eagles are widespread around the coasts. Wildcats and pine martens remain common in the Lake District. In this ground-breaking volume, the observations of early modern amateur naturalists, travellers and local historians are gathered together for the very first time. Drawing on more than 10,000 records from across Britain and Ireland, the book presents maps and notes on the former distribution of over 160 species, providing a new baseline against which to discuss subsequent declines and extinctions, expansions and introductions. A guide to identification describes the reliable and unreliable names of each species, including the pre-Linnaean scientific nomenclature, as well as local names in early modern English and, where used in the sources, Irish, Scots, Scottish Gaelic, Welsh, Cornish and Norn. Raising a good number of questions at the same time as it answers many others, this remarkable resource will be of great value to conservationists, archaeologists, historians and anyone with an interest in the natural heritage of Britain and Ireland.

The Collected Works of C. G. Jung C. G. Jung 2014-03-01 For the first time, The Collected Works of C. G. Jung is now available in a complete digital edition that is full-text searchable. The Complete Digital Edition includes Vols. 1-18 and Vol. 19, the General Bibliography of C. G. Jung's Writings. (Vol. 20, the General Index to the Collected Works, is not included.) Volumes 1-18 of The Collected Works are available for individual purchase and are also full-text searchable at <http://press.princeton.edu/catalogs/series/bscwj.html> [The Collected Works of C.G. Jung]. The Collected Works of C. G. Jung forms one of the basic texts of twentieth-century thought: at once foundational for depth psychology and pivotal for intellectual, cultural, and religious history. The writings presented here, spanning five decades, embody Jung's attempt to establish an interdisciplinary science of analytical psychology, and apply its insights to the fields of psychiatry, criminology, psychotherapy, psychoanalysis, personality psychology, anthropology, physics, biology, education, the arts and literature, the history of the mind and its symbols, comparative religion, alchemy, and contemporary culture and politics, among others: each in turn has been decisively marked by his thought. Of timely and ongoing relevance to the understanding of these fields, Jung's writings are at the same time essential reading for any understanding of the making of the modern mind.

Aion C.G. Jung 2014-12-18 Aion is one of a number of major works that Jung wrote during his seventies that were concerned with the relations between psychology, alchemy and religion. He is particularly concerned in this volume with the rise of Christianity and with the figure of Christ. He explores how Christianity came about when it did, the importance of the figure of Christ and the identification of the figure of Christ with the archetype of the Self. A matter of special importance to Jung in his seventies - the problem of opposites, particularly good and evil - is further discussed and the importance of the symbolism of the fish, which recurs as a symbol of both Christ and the devil, is examined. As a study of the archetype of the self, Aion complements The Archetypes and the Collective Unconscious, which is also published in paperback.

The Anatomy House in Copenhagen Thomas Bartholin 2015 While the dissection of bodies had already been allowed to form part of an education at European universities during the 1500s, an anatomical theatre was first established at the University of Copenhagen in 1644, that is to say, an auditorium where lectures on bodies could be held. In addition to serving the instruction of students and general research, it was here that professor of anatomy Thomas Bartholin demonstrated the existence of the thoracic duct and later the lymphatic vessels in a human being, an achievement bestowing immediate fame on Bartholin and resonating in learned circles throughout Europe. In 1662 Thomas Bartholin published A Short Description of the Anatomy House in Copenhagen. This book, which meticulously describes the layout of the Anatomy House together with the first eighteen years of its history, was composed in Latin, so that by this means it could make this institution known to an international public. These and other activities went on in the anatomical theatre until the great fire of 1728 in Copenhagen ravished it. Bartholin's publication survived, which in the narrower sense documents a part of the University's history and from a broader perspective gives an insight into the scientific ideal that provided the impetus behind anatomical studies in seventeenth-century Europe. Furnished with commentary by the editor Niels W. Bruun and an introduction by historian Morten Fink-Jensen, this first appearance of Bartholin's work in English, thus reaching a wider international audience, will undoubtedly consolidate its rightful position as an important contribution to the history of anatomical houses. The English translation was undertaken by Peter Fisher. The book contains 44 illustrations in colour and a revised critical edition of the Latin text by the editor.

Collected Works of C. G. Jung, Volume 9 (Part 2) C. G. Jung 2014-03-01 Aion, originally published in German in 1951, is one of the major works of Jung's later years. The central theme of the volume is the symbolic representation of the psychic totality through the concept of the Self, whose traditional historical equivalent is the figure of Christ. Jung demonstrates his thesis by an investigation of the Allegoria Christi, especially the fish symbol, but also of Gnostic and alchemical symbolism, which he treats as phenomena of cultural assimilation. The first four chapters, on the ego, the shadow, and the anima and animus, provide a valuable summation of these key concepts in Jung's system of psychology.

A Philosophical Account of the Works of Nature Richard Bradley 1721 "As the title suggests, this volume provides a philosophical account of the works of nature relating to the scale of life on earth, including plants and animals. It also presents an account of the state of gardening throughout Great Britain and Great Britain, suggesting several new experiments relating to the improvement of barren ground, and the propagating of timber-trees, fruit-trees, etc. Of his work, the author states that it is not to be expected that in a volume as small as the present he will be able to give a full relation of the exterior and interior parts of bodies; nor can it be supposed that he will name every different mineral, plant, or animal that is commonly known. However, it is from our general sense of natural history, that he endeavors to lay the foundation of his building, and shall consider himself happy enough, if, among the parts that he does indeed touch upon, he has hit on anything new and useful"--Introduction.
