Biotechnologies and Biomimetics for Civil Engineering Fernando Pacheco Torgal 2014-08-16 Putting forward an innovative approach to solving current technological problems faced by human society, this book encompasses a holistic way of perceiving the potential of natural systems. Nature has developed several materials and processes which both maintain an optimal performance and are also totally biodegradable, properties which can be used in civil engineering. Delivering the latest research findings to building industry professionals and other practitioners, as well as containing

information useful to the public, 'Biotechnologies and Biomimetics for Civil Engineering' serves as an important tool to tackle the challenges of a more sustainable construction industry and the future of buildings.

Biomimetics in Architecture Petra Gruber 2011-02-24 The purpose of investigating the overlaps between architecture and biology is neither to draw borders or make further distinctions nor to declare architecture alive, but to clarify what is currently happening in the blurred fields, and to investigate the emerging discipline of „biomimetics in architecture" [Architektur**bi**onik]. An overview of the present state of research in the relatively young scientific field of biomimetics shows the potential of the approach. The new discipline aims at innovation by making use of the subtle systems and solutions in nature having evolved within millions of years. Approaches that have been taken to transfer nature's principles to architecture have provided successful developments. The new approach presented in this book transfers the abstract concept of life onto built environment. Strategic search for life's criteria in architecture delivers a new view of architectural achievements and makes the innovative potential visible, which has not been exploited yet. A selection of case studies illustrates the diversity of starting points: from vernacular architecture to space exploration.

The Vascular Flora of the National Park of Abruzzo, Lazio and Molise (Central Italy) Fabio Conti 2015-02-06 This book provides an updated list of the vascular flora of the National Park of Abruzzo, Lazio and Molise, incorporating the latest nomenclatural and floristic findings. The list of plants was extrapolated from a geographic database including all data from floristic or vegetational references and herbarium specimens concerning the Park area. This data storage tool was obtained from the database of Abruzzo vascular flora (Conti et al. 2010) and adapted to the study area by adding those areas of the Park falling in the regions of Lazio and Molise and their accompanying floristic and

vegetational data. Analysis of the data has allowed gaps in the floristic knowledge of the Park, such as comparatively or completely unexplored areas, to be identified, together with those species records that still require confirmation and/or further study. On the basis of these deductions, fieldwork aimed at the collection of new floristic data was carried out. Verification of the correct identification of herbarium specimens collected in the past, as well as a systematic study of critical genera, were also important priorities.

Contemporary Medicine in Malta [1798-1979] Charles Savona-Ventura 2016-05-08 This book is the final volume of a series of books by the same author covering the history of medicine in the Maltese Islands from the prehistoric age right through the modern period. This volume deals with the medical practice during the last two-hundred years, a period that saw the final phase of the emergence of the scientific basis of disease understanding and management. The Contemporary Period in the Maltese Islands saw its start with political upheaval resulting in the ousting of the Hospitaller Order of Saint John by the french, and the eventual ousting of the new rulers with the Islands falling within the dominion of the British Empire. The book looks at the efforts to re-establish

and update public health legislation, review social welfare services, and medical education. It further reviews the history of various medical conditions and their management in the light of the new scientific advances.
