American Catch Paul Greenberg 2015-06-09 INVESTIGATIVE REPORTERS & EDITORS Book Award, Finalist 2014 "A fascinating discussion of a multifaceted issue and a passionate call to action" --Kirkus From the acclaimed author of *Four Fish* and *The Omega Principle*, Paul Greenberg uncovers the tragic unraveling of the nation's seafood supply—telling the surprising story of why Americans stopped eating from their own waters in *American Catch* In 2005, the United States imported five billion pounds of seafood, nearly double what we imported twenty years earlier. Bizarrely, during that same period, our seafood exports quadrupled. *American Catch* examines New York oysters, Gulf shrimp, and Alaskan salmon to reveal how it came to be that 91 percent of the seafood Americans eat is foreign. In the 1920s, the average New Yorker ate six hundred local oysters a year. Today, the only edible oysters lie outside city limits. Following the trail of environmental desecration, Greenberg comes to view the New York City oyster as a reminder of what is lost when local waters are not valued as a food source. Farther south, a different catastrophe threatens another seafood-rich environment. When Greenberg visits the Gulf of Mexico, he arrives expecting to learn of the Deepwater Horizon oil spill's lingering effects on shrimpers, but instead finds that the more immediate threat to business comes from overseas. Asian-farmed shrimp—cheap, abundant, and a perfect vehicle for the frying and sauces Americans love—have flooded the American market. Finally, Greenberg visits Bristol Bay, Alaska, home to the biggest wild sockeye salmon run left in the world. A pristine, productive fishery, Bristol Bay is now at great risk: The

proposed Pebble Mine project could undermine the very spawning grounds that make this great run possible. In his search to discover why this precious renewable resource isn't better protected, Greenberg encounters a shocking truth: the great majority of Alaskan salmon is sent out of the country, much of it to Asia. Sockeye salmon is one of the most nutritionally dense animal proteins on the planet, yet Americans are shipping it abroad. Despite the challenges, hope abounds. In New York, Greenberg connects an oyster restoration project with a vision for how the bivalves might save the city from rising tides. In the Gulf, shrimpers band together to offer local catch direct to consumers. And in Bristol Bay, fishermen, environmentalists, and local Alaskans gather to roadblock Pebble Mine. With American Catch, Paul Greenberg proposes a way to break the current destructive patterns of consumption and return American catch back to American eaters.

Quality of Fish from Catch to Consumer J. B. Luten 2003 In this book, for the first time, scientists from various disciplines and all partners in the fishery chain address the important issues of quality labelling, monitoring and traceability of fish. The complexity of the European fishery sector, the attitudes towards quality labelling GMP and the needs for quality information are presented. The progress of implementing traceability (schemes) from catch to consumer is covered. Fishermen give their view on GMP on board of their vessels. New tools for measuring the quality of the catch and the experience with quality grading of the landed fish by QIM are described. Attention is paid to

recent developments of E-commerce of fish via the auctions. The possibilities of combining various instrumental methods for measuring fish quality are highlighted. A range of contributions on labelling systems, industrial standards, awards and certification procedures for the quality of fish are included. An overview on consumer research on fish in Europe is presented. In addition papers are covering consumer's responses to fresh fish, the evaluation of a promotion campaign for seafood consumption and consumer's opinions towards farmed fish, health and food safety. The implications of quality labels for the consumers and the influence on their buying decision process are addressed. Two papers discussing labelling, price and packaging as value indicators and the product differentiation for shellfish complete the book.

The Life-history and Growth of the Pismo Clam Frank Walter Weymouth 1923 Commercially the Pismo clam (*Tivela stultorum*) ranks first in importance in California among the clams and third among all the mollusks, being exceeded only by the oyster and the abalone. A second reason for considering this species is that there has been such evidence of depletion as to lead to increasingly more stringent protective laws, all of which have been urged by the residents of the county in which the clam is most abundant. ... An accurate study of the cause and extent of this apparent diminution must await knowledge of at least the fundamental facts of the life history of this clam. ... The more important features are considered to be: the habits, enemies and mortality of the adult; the rate of growth and the factors affecting it; the age at certain significant periods, particularly at sexual maturity and at the time when the legal size is reached; the most common age of clams forming the commercial catch; the season of spawning and the productivity; and the habits, enemies and

mortality of the young.

Quality and Quality Changes in Fresh Fish Hans Henrik Huss 1995 Fresh fish is a central point in fish as food utilization. First, it is in itself the most important item both on local and international fish markets, second because it is not possible to obtain a safe and quality fish product unless fresh fish is used as the primary raw material. FAO understands that these are the basic concepts on which it is necessary to insist in order to provide fish markets with safe fish and fishery products of improved quality, and to contribute to the reduction of post-harvest losses. In 1988, FAO published "Fresh fish - quality and quality changes" (FAO Collection: Fisheries, No. 29), authored by Professor Hans H. Huss. It has been published by FAO in English, French and Spanish, and apart from the original Danish version, it has been translated and published by FAO field projects into Arabic, Chinese and Vietnamese. It has served for the training of thousands of fish technologists throughout the world, in particular during the development of the FAO/DANIDA Training Project on Fish Technology and Quality Control. The broad experience gained during the training activities has been

extremely useful to improve, update and enlarge whenever necessary the above-mentioned document. After seven years, the need became apparent for a new publication on the subject. *Mountain Man's Christmas Catch* Hazel J.
