Organization Design for International Construction

Business Lu Chang Peh 2013-01-04 The book explains how Gravitational Distance and the System of Cities influence transnational construction-related firms when they venture overseas. The study presented in the book internalizes the characteristics of home and foreign cities, and of transnational firms, to develop situational business strategies and organization designs in terms of Strategy, Structure, Systems, Leadership Style, Firm's Skills, Staff's characteristics, Shared Values and Supply Chain. The book presents the findings of surveys and interviews with managers and professionals in eight different Asian cities stretching from Singapore to China. The findings are then used to develop business solutions in the form of a Decision Support System (DSS) for transnational construction firms, helping them to adopt an appropriate organization design strategy when they venture into overseas markets. Issues relating to globalization, competitiveness, risk management, communications, networks, government interference, business strategies, organization structures and systems in the context of international construction business are discussed together with corresponding recommendations for implementation. Although construction-related firms were used as the basis for the field studies, the lessons learned are equally applicable for organizations in other industries.

Multiple Contracts and Coordination in International

Construction Projects Jürg Künzle 2020-07-16 International Arbitration Law Library, Volume Number 57 Collaboration between multiple parties from different countries is one of the main challenges of almost every international undertaking, and this is especially true in the case of large and complex

construction projects, such as airport terminals, interchange subway stations, distribution centers, industrial processing and manufacturing facilities or hydropower plants. This comprehensive analysis of key legal issues arising from interdependencies between multiple contracts methodically lays out, from a Swiss law perspective, the way in which coordination of works in construction projects could or should occur. It also examines the legal consequences of coordination failure and various related aspects of dispute resolution. Topics covered include the following: interfaces and interdependencies across the system boundaries of multiple contracts coordination responsibilities derived from the principle of good faith and from a contextual interpretation of interdependence-related FIDIC Red Book provisions; delegation scenarios; liability for breach of contract and legal remedies in case of delay, disruption, defects, destruction and performance impossibility; direct claims against third parties; taking of evidence under substantively intertwined contracts; and coordination of interrelated arbitration proceedings. The detailed analysis draws on numerous specific real-life examples as well as illustrative Swiss and United States case law. An appendix offers very useful practice pointers. Although considering Swiss law, which is a frequent choice for the law governing international construction contracts, the analysis deals with an array of conceptual aspects of multiple contracts and coordination, thereby addressing a great number of issues beyond the limits of national law. With its practical examples, the book is sure to be welcomed by those seeking to avoid or resolve disputes to which project coordination may give rise. It will prove of particular value to practitioners negotiating international construction contracts, arbitrators, in-house counsel representing owners and contractors involved in international construction projects, members of dispute review boards and project managers.

International Construction Contracts William Godwin
2012-12-12 Many large construction projects, such as those in the Middle East or Asia Pacific, are international in scope with a range of contractors and subcontractors signing contracts for delivery of specified work or services. the parties to these contracts may be based in different parts of the world, and are often working to different legal systems and understandings. This can lead to confusion in the understanding, interpretation and execution of a given contract. International Construction Contracts provides concise and practical guidance to those involved in the negotiation and management of international construction and engineering contracts. It sets out in clear, straightforward language the main features of construction contracts and international dispute resolution procedures. It ensures the reader is aware of the issues that might arise on the contractual side of their project so that they may better protect their party's interests. Many of the features and points discussed are illustrated by reference to the popular FIDIC contracts and the book includes a commentary on the two most widely used FIDIC design-build forms, the Yellow and Silver Books. Also included in the book is a fully worked example of a typical ICC arbitration from start to finish, with "pleadings", a detailed case narrative and commentary on events, and an example arbitration award. The ICC and SIAC arbitration rules are also provided. Written for construction professionals, the book will be of great interest to engineers, architects, project managers, quantity surveyors, contract managers and contract administrators working on international projects.

Economics for the Modern Built Environment Les Ruddock

2008-10-10 Recent decades have seen a major social and economic changes across the developed world and consequent changes in the construction and property industries. The discipline of construction economics needs to respond to this. For instance, the importance of sustainable development has become recognised, as has the need to increasingly master the medium and long-term consequences of construction, not only in the production but also in the management of buildings across their whole life-cycle. And the new focus on the service rendered by buildings, as distinct from the buildings themselves, has

prompted a new approach to the construction and property industries. Any economic analysis of these sectors has to take account of all the participants involved in the life-cycle of building structures - not only in the design and construction, but also in the operation, maintenance, refurbishment and demolition of property. This innovative new book draws on the work of the Task Group of the CIB (International Council for Research and Innovation) on Macroeconomics for Construction. It pulls together discussions of mesoeconomic and macroeconomic models and methodologies in construction economics and presents an exciting approach to the analysis of the operation and function of the construction and property sector within the economy. Graduate students and researchers will find it an invaluable work.

construction contracts as well as very large contracts for which the contract sum may be in the billions of dollars. The focus of the book is on construction contracts entered into by commercial organisations operating in a business environment. Contract law generally assumes that such parties are of equal bargaining power and puts relatively few fetters on their ability to agree on the terms of their bargain. However, where legislation impacts on the execution of construction projects or the operation of construction contracts it may be of major importance in protecting the rights of weaker parties or third parties. It is assumed that the users of this book will be familiar with the general concepts of tendering and contracting for engineering and construction projects but may not have any formal knowledge of the law. To the extent possible, the emphasis is on general principles of contract law that are widely accepted in many jurisdictions. Examples are drawn from case law in a number of common law jurisdictions, as well as from civil codes.

Public Private Partnerships in International Construction Albert

P. C. Chan 2014-01-23 Over the last ten years public private partnerships have become ever more popular worldwide, expanding the body of experience among construction professionals, government agencies, and industry. In these economically challenging times, PPP has emerged as a crucial framework for providing infrastructure, and also to boost construction industry activity, while shielding the taxpayer from some of the cost. Understanding the lessons learnt is essential to ensuring the success of future projects, and this timely book will prepare the reader to do just that. Starting by defining PPP itself, part one is designed to help the novice to get to grips with the basics of this topic. Part two tackles the practicalities of PPPs, including successful implementation, managing the risks involved, and how to assess the suitability of a project for the PPP route. Part three presents detailed case studies from Asia, Africa, and Australia to illustrate how PPPs should be managed, how problems emerge, and how PPPs can differ across the world.

Drawing on extensive internationally conducted research, from both industry and academia, the authors have written the essential PPP guide. Taking into consideration the perspectives of those in the public sector and the private sector, as well as built environment professionals, it is essential reading for anyone preparing to work on public private partnerships in construction.

International Construction Management Igor Martek 2022-02-07

This book tells you everything you need to know about international construction: the companies, their markets, the types of projects they build, how they compete and operate and how it affects us all. It paints a comprehensive portrait of an overlooked global business that generates a major portion of the GDP in every developed nation. As with any mature sector, countries make efforts to export their expertise, but the competition in construction is fierce, and the risks are many. Only the leanest and meanest survive. What, then, does it take to win? Most writing on construction focuses at the project-management level or even more narrowly at the level of technical performance. This book presents the big picture; it tells you what successful international construction companies do to stay in the game and thrive. The book examines international construction through three lenses. The first is theory. The body of existing knowledge on construction is here brought together, condensed and explained. The second are the actors. The companies that lead the way in global construction are showcased, and the features that make countries desirable hosts are appraised. Finally, what is it that firms actually do? This last part delves into the various strategic approaches taken by 60 construction firms in carving out and defending an overseas market niche. The insights provide guidance on how global construction companies develop competitive advantage and stay resilient in the face of a mercurial global economy. These lessons will be of interest to the student and manager alike.

There is probably no area of activity more in need of reliable dispute resolution procedures than construction projects, especially if more than one jurisdiction is involved. The third edition of this eminently practical guide greatly facilitates the process for all parties concerned. The text, updated to include the latest edition of arbitral rules and introducing the Prague Rules, considers the full range of available dispute resolution methods, including mediation, conciliation and determination by dispute review boards, before focusing specifically on arbitration. The book then looks in detail at all aspects of arbitration, from commencement of proceedings, selection of the tribunal, through preparation and collection of the evidence necessary in complex construction cases, to common procedural issues, the conduct of the hearing, the effect of the award, challenges to it and its enforcement. The third edition addresses fresh thinking on MedArb, guidance on preparation for and conduct of virtual hearings in the wake of COVID-19, technological advances to assist collection and presentation of evidence, litigation funding and includes a new chapter on the role of arbitration in tender disputes. Specific valuable features include the following: guidance on the drafting of dispute resolution provisions designed to minimise disputes and facilitate their swift resolution; flowcharts to illustrate the stages in dispute procedures and arbitration; a comparison between common law and civil law approaches to key concepts; details of the key features of a construction contract, common standard forms and procurement structures; expert guidance on effective contract administration; step-by-step advice on the conduct of a construction arbitration to maximise efficiency; and coverage of particular issues thrown up by complex construction disputes which differentiate them from other commercial disputes, with guidelines on how to approach such issues in the presentation before a tribunal. As an easy-to-use resource for

both general counsel and the lawyers in private practice, this book has no peers. It has proved to be of particular value to commercial contract negotiators and corporate counsel who may have many years of experience but have not had to live through a construction dispute or manage a construction contract during the life of a project. Lawyers in private practice embarking on a construction dispute for the first time will also find this book of value, as will students of dispute resolution.
