Malattie delle piante che segnarono la storia Giuseppe Belli 2012-01-01 Come incisero sulla storia di intere popolazioni alcune malattie delle piante? Come portarono modifiche al modo di vivere o al paesaggio in cui viviamo? In un breve saggio il prof. Giuseppe Belli tratta, sotto un profilo essenzialmente storico, di alcune malattie delle piante che, nei secoli scorsi o in anni recenti, non solo arrecarono danni consistenti alle coltivazioni o alle essenze forestali, ma causarono direttamente o indirettamente avvenimenti che incisero sulla storia di intere popolazioni. Dal caso dell'ergotismo, una grave malattia dell'uomo causata dalle tossine prodotte da un fungo fitopatogeno, alla scoperta dei virus dovuta ai primi studi effettuati sul mosaico del tabacco, dalle antiche carestie alla ruggine del caffè un impasto di erudizione e senso narrativo per un testo chiaro e piacevolmente scorrevole.

Plant Physiology Lincoln Taiz 2002-01-01 This third edition provides the basics for introductory courses on plant physiology without sacrificing the more challenging material sought by upper division and graduate level students. The text contains many new or revised figures and photographs, all in full colour. A website, referenced throughout the text, includes additional study questions, WebTopics (elaborating on selected topics discussed in the text), WebEssays (discussions of cutting edge research topics, written by those who did the work) and additional suggestions for

further reading. Key pedagogical changes to the text result in a shorter book. Advanced material from the second edition has been removed and posted at an affiliated Web site, while many new or revised figures and photographs, study questions and a glossary of key terms have been added. Despite the streamlining of the text, the third edition incorporates all the important developments in plant physiology, especially in cell, molecular and developmental biology.

Immunized Plants Ruggero Osler 2023-03-16 Cultivated plants, despite scientific progress, are paradoxically becoming more fragile and more at risk of disease than in the past: testifying to the endless waves of epidemics that are hitting our countryside and vineyards. Owing to commonly used agronomic techniques we are undermining biodiversity and the natural resilience of our crops. To confront costly and dangerous diseases, like epidemics, bold and innovative protection strategies are needed. Instead of combatting the pathogen and the vector head on, this book focuses on the plant host and the real possibility of reinforcing that host through a process of induced resistance. All plants, grapevines included, like animals, learn from their "experiences" and are able to become immunized: after infection, they can become resistant to diseases and other stress factors. This volume proposes the use of plants that are naturally immunized, those that have passed the gauntlet of Darwinian natural selection and have demonstrated stable and transmissible tolerances and resistances.
