**Drug Screening Methods** Suresh Kumar Gupta 2005 Drug discovery and development is a challenging, expensive and time consuming field of research, requiring contributions from chemists, pharmacologists, toxicologists, clinicians, and practitioners. The ultimate goal is to generate a safe and biologically active drug which can stall, or even reverse, the pathological events that cause the disease condition. But in the search for the drug a host of tests and trials must be applied to evaluate the efficiency and safety of the newly developed molecule in the biological system. These trials or "screening methods" are critical. On their basis, the new molecule either becomes accepted for usage, or is discarded forever. Advances in drug research have forced the need for quicker, more automated screening methods, using molecular techniques applied in vitro, in vivo and in clinical systems. Researchers need to know the latest developments outside their own speciality. With this book, Professor Gupta has brought together in one coherent volume the most up to date developments of consolidated screening methods for biological systems. By paying attention to the practical techniques used in academia and the commercial pharmaceutical industry, "Drug Screening Methods" will enjoy a broad readership, serving both the professional community and the student of pharmacology.

**Advanced Pharmacology** Bikash Medhi 2019-12-02 "Advanced Pharmacology" aimed to deliver such topics of drugs which are very important to be known by any healthcare professional, but found rarely in any books or library. Complete idea of publishing it, is to provide readers a good platform to study the rare topics in pharmacology. This book is recommended for MBBS, MD (Pharmacology), DM (Clinical Pharmacology), Pharm D., M. Pharm and B. Pharm students or any other healthcare professionals. The book is a strong learning aid for post graduate teaching and also helps clinicians or other healthcare professionals understand the pharmacological basis of pharmacotherapeutics through thematic flow diagrams and logical explanations for specialized topics in pharmacology to ease the reading. Book is divided into three sections; Initial two sections of the book deal with basic aspects of clinical pharmacology, regulation and therapeutics; also address the most recent advances in the field. Third section is thoroughly updated to provide readers with an ideal reference that covers wide range of neglected but important topics. It also provides a rich collection of material on critical areas such as medication errors, rational use of drugs, self medication, drug compliance etc. Several other essential regulations framed in India for drugs have been incorporated in the chapters drug policy, drug pricing, orphan drugs etc. Further, critical issues in pharmacology like usage of drugs in pregnancy, renal and hepatic complications, drug-drug interactions etc. are also addressed in a point specific manner to simplify the language to readers. Emerging topics in medical fields like regenerative medicine, nanomedicine, electronic prescribing (e-Rx), drug surveillance systems like Pharmacovigilance, Haemovigilance, Materiovigilance etc. are well explained. Hope, "Advanced Pharmacology", will fulfill the demand and need of healthcare professionals by covering the important and rare topics on drugs.
