Tax Sovereignty in the BEPS Era Sergio André Rocha

2016-04-24 The power of a country to freely design its tax system is generally understood to be an integral feature of sovereignty.

However, as an inevitable result of globalization and income mobility, one country's exercise of tax sovereignty often overlaps, interferes with, or even impedes that of another. In this collection of essays, internationally respected practitioners and academics reveal how the OECD's Base Erosion and Profit Shifting (BEPS) initiative, although a major step in the right direction, is insufficient to resolve the tax sovereignty paradox. Each contribution deals with different facets of a single topic: How tax sovereignty is shaped in a post-BEPS world. The contributors provide in-depth analysis of such relevant issues as the following: why multilateral cooperation and soft law consensus are the preferred solutions to a loss of autonomy over national tax policy; - how digital commerce has upended traditional notions of source and residence; - why residence and source continue to be the two essential building blocks of tax sovereignty and the backbone of the international tax system; - how developing countries can take advantage of the new international tax architecture to ensure that their voices are truly shaping the standards; and - transfer pricing reform. Collectively, the authors provide an authoritative

commentary on the necessary preconditions for exercising the power to tax in today's world. Their perspectives and recommendations will prove of great value to all policymakers, legislators, practitioners, and academics in the international taxation arena.

Transfer pricing continues to be one of the most significant areas of heightened controversy in international taxation for multinational enterprises and tax administrations. Due to its far-reaching consequences, tax professionals and individual tax jurisdictions are required to understand the fundamentals of the topic, which is often caught in a maze of literature. Emerging from the joint research conducted by the WU Transfer Pricing Center at the Institute for Austrian and International Tax Law at WU (Vienna University of Economics and Business), the international tax law firm L&P - Ludovici Piccone & Partners, and the experiences from the annual advanced transfer pricing courses and conferences, this first edition of the book acts as a manual for understanding transfer pricing principles and their practical application. Rethinking Fiscal Policy after the Crisis Ludovít Ódor 2017-05-18

Before the financial crisis, fiscal policy often played a secondary role to monetary policy, with the manipulation of interest rates to hit inflation targets being the main instrument of macroeconomic management. However, after the financial crisis and the subsequent euro crisis, fiscal policy has been brought back to the fore. In the past, the limited understanding of the effects of fiscal policy, neglect of monetary-fiscal interactions, faulty institutional set ups or ignorance of market expectations often led to bad policies. This book, written by a team of leading economists, seeks to address the current oversight of fiscal policy and to upgrade our understanding and conduct of fiscal policy, presenting a well-balanced diagnosis and offering several important lessons for future fiscal analysis and policymaking. It is an essential read for academics and graduate students focused on the current debate over fiscal policy, as well as policy-makers working on day-to-day policy issues.

International Taxation of Income from Services under Double Taxation Conventions Marta Castelon 2016-04-24

The provision of international services has increased enormously, mainly due to the precipitous growth of the digital economy. Accordingly, the interpretation and application of double taxation conventions (DTCs) to income from services has become a dominant focus in the international taxation. This multiple-award-winning book is an indispensable tool for practitioners and a major contribution to the debate about tax reform. It responds to the need for a comprehensive overview of the tax opportunities and risks relating to the provision of international services. It also offers the first in-depth analysis of the taxation of income from services vis-à-vis the multilateral instrument (MLI) resulting from the OECD's Base Erosion and Profit Shifting (BEPS) initiative. With the thorough analysis of the international taxation of income from services over the last two centuries, the author sheds new

light on present tax policy debates and develops workable proposals for bringing brick-and-mortar DTCs into the digital reality. With an abundance of case studies, treaty interpretations, appraisals of policy discussions, and practical solutions, the author examines every aspect of the subject, including the following: - the Model DTCs of the OECD, the United Nations, Germany, and the United States, their similarities and differences; - relationships among the MLI, the Model DTCs, and specific DTCs; - development of the provisions dealing with services in the DTCs; - how tax authorities and courts of different countries (e.g., the United States, Germany, Brazil, India, and China) apply DTC provisions on the taxation of international services; - opportunities and risks relating to different business practices, such as the subcontracting of services provisions, the hiring-out of labour, the secondment of employees, and the engagement of contract and toll manufacturers; - practical questions about the taxation of different distribution models - from fully edged distributors to commissionaires; - challenges and proposals relating to the differentiation between various types of services under DTCs; - the permanent establishment concept; - to what extent the structure, purposes, and scope of DTCs differ from those of the General Agreement on Trade in Services (GATS); - how changes in the US Model DTC of 2016 affect international service provisions; and - proposed changes to amending the OECD and UN Model DTCs. Viable proposals to simplify DTC provisions dealing with service income and align them with current challenges such as the digital economy and the increasing volume of remote services are offered, particularly in light of the likely impact of the 'BEPS package' and its subsequent MLI. This book is poised to become one of the key practice resources for tax lawyers, in-house counsel, and policymakers in the coming years. Interested academics too will benefit from the author's skill in recognizing the ongoing role of taxation fundamentals in the major revolution currently

underway.

The Financialisation of Power Sarah Bracking 2016-05-05 The financial crash of 2008 led people all over the world to ask how far financiers are in control of our lives. To what extent does what they do with our money affect our everyday lives? This book asks whether the crisis, and subsequent use of public subsidies to help the international economy recover, was a unique event, or a symptom of a wider malaise where financiers have effectively usurped the power of governments and are running the political economy themselves. The Financialisation of Power in Africa argues that growth is not always a good thing. The development of more derivatives and faster financial exchanges are draining businesses of investment capital rather than serving to supply it;

applying financial logic does not save nature or protect biodiversity and other species. This book outlines the concept of financialisation and how it has been used in various ways to explain the post-2008 crisis and global political economy. There is a particular focus on these issues in reference to Africa, which has a particular dependence on international money. It takes the perspective of the modern state, exploring how the political economy of development actually works in relation to African governance. This book is of interest to students of international development and political economy and is a key source for policy makers interested in African studies and economic development. *IMF Publications Catalog, Fall/Winter 2018* International Monetary Fund. External Relations Dept. 2018-09-06 This paper focuses on several IMF publications published in the winter of year 2018. *Realizing Indonesia's Economic Potential* book uncovers some of the forces that are likely to shape Indonesia's economy. It analyses the constraints to growth, propose options to boost economic growth, and explore key issues policymakers will need to handle in the future. *The ASEAN Way: Sustaining Growth and Stability* book provides a comprehensive account of how Association of Southeast Asian Nations, its individual members and as a group, rose above its worst regional financial crisis 20 years ago, to become one of the most resilient in the face of the worst global financial crisis just a decade later. The challenges faced and the policy responses taken, chronicled and analyzed in this study, can hopefully provide further lessons as we face a new global policy paradigm. It is a must-read for academics, the financial community, and policymakers alike.

Corporate Tax Base in the Light of the IAS/IFRS and EU Directive 2013/34: A Comparative Approach Mario Grandinetti 2016-06-17

The recent relaunch of the European Commission’s Common Consolidated Corporate Tax Base (CCCTB) project promises a sorely needed leap forward in the harmonization of the rules by which companies calculate their taxable profits. In particular, the initiative hopes to remedy the severe barrier to cross-border business caused by the ‘the accounting Tower of Babel’ by which companies’ tax bases are determined under national law. This thorough analysis and commentary covers the influence of accounting rules on tax, considering both generally accepted standards - international accounting standards (IAS) and international financial reporting standards (IFRS) - and EU Directive 2013/34. Three introductory chapters usher in detailed comparative overviews of the effect of these rules on taxation in nine EU Member States as well as in two other major EU trading partners, the United States and Brazil. Fully explaining the remarkable recent improvement in the comparability of accounts that represent favourable preconditions for creating a single market for financial services within the EU, this book covers every relevant detail, including the following and much more: - criterion of evaluation of alternative fixed assets based on revaluated amounts; - criterion based on fair value; - provisions applicable to income statements, notes, reports, and financial statements; - rules applicable to the publication of documents; - transparency in payments to governments; - dispositions on exemptions; - hierarchy of general provisions and principles; - balance sheet and profit and loss account; - simplifications for small and medium-sized enterprises (SMEs); - system of

creditors' protection; and - protection of investors' interests. This book is a peerless explication of the taxation choices granted to Member States under IAS/IFRS and EU Directive 2013/34 and how they will be affected by ongoing Commission initiatives. Because relevant, timely, reliable, and comparable information assumes a leading role in protecting the interests of investors, creditors, and other stakeholders, as well as in ensuring that all operators act on a level playing field under equal conditions, the analysis presented here is of immeasurable value to lawyers, business persons, and officials concerned with taxation, not only in Europe but anywhere within the reach of international trade.
