Regeneration Pat Barker 1993-07-01 "Calls to mind such early moderns as Hemingway and Fitzgerald...Some of the most powerful antiwar literature in modern English fiction."—The Boston Globe The first book of the Regeneration Trilogy—a Booker Prize nominee and one of Entertainment Weekly's 100 All-Time Greatest Novels. In 1917 Siegfried Sasson, noted poet and decorated war hero, publicly refused to continue serving as a British officer in World War I. His reason: the war was a senseless slaughter. He was officially classified "mentally unsound" and sent to Craiglockhart War Hospital. There a brilliant psychiatrist, Dr. William Rivers, set about restoring Sasson's "sanity" and sending him back to the trenches. This novel tells what happened as only a novel can. It is a war saga in which not a shot is fired. It is a story of a battle for a man's mind in which only the reader can decide who is the victor, who the vanquished, and who the victim. One of the most amazing feats of fiction of our time, Regeneration has been hailed by critics across the globe. More than one hundred years since World War I, this book is as timely and relevant as ever.

Some Luck Jane Smiley 2014-10-07 NATIONAL BESTSELLER • NATIONAL BOOK AWARD FINALIST • From the Pulitzer Prize-winning author of *A Thousand Acres* comes the first volume of an epic trilogy that takes us on a literary adventure through cycles of birth and death, passion and betrayal that will span a century in America. "Intimate.... Miraculous.... Staggering.... A masterpiece in the making." —USA Today 1920, Denby, Iowa: Rosanna and Walter Langdon have just welcomed their firstborn son, Frank, into their family farm. He will be the oldest of five. Each chapter in this

extraordinary novel covers a single year, encompassing the sweep of history as the Langdons abide by time-honored values and pass them on to their children. With the country on the cusp of enormous social and economic change through the early 1950s, we watch as the personal and the historical merge seamlessly: one moment electricity is just beginning to power the farm, and the next a son is volunteering to fight the Nazis. Later still, a girl we'd seen growing up now has a little girl of her own.

Genetic Programming and Data Structures W.B. Langdon 1998-04-30 Computers that 'program themselves' has long been an aim of computer scientists. Recently genetic programming (GP) has started to show its promise by automatically evolving programs. Indeed in a small number of problems GP has evolved programs whose performance is similar to or even slightly better than that of programs written by people. The main thrust of GP has been to automatically create functions. While these can be of great use they contain no memory and relatively little work has addressed automatic creation of program code including stored data. This issue is the main focus of Genetic Programming, and Data Structures: Genetic Programming + Data Structures = Automatic Programming!. This book is motivated by the observation from software engineering that data abstraction (e.g., via abstract data types) is essential in programs created by human programmers. This book shows that abstract data types can be similarly beneficial to the automatic production of programs using GP. Genetic Programming and Data Structures: Genetic Programming + Data Structures = Automatic Programming! shows how abstract data types (stacks, queues and lists) can be evolved using genetic programming, demonstrates how GP can evolve general programs which solve the nested brackets problem, recognises a Dyck context free language, and implements a simple four function calculator. In these cases, an appropriate data structure is beneficial compared

to simple indexed memory. This book also includes a survey of GP, with a critical review of experiments with evolving memory, and reports investigations of real world electrical network maintenance scheduling problems that demonstrate that Genetic Algorithms can find low cost viable solutions to such problems. Genetic Programming and Data Structures: Genetic Programming + Data Structures = Automatic Programming! should be of direct interest to computer scientists doing research on genetic programming, genetic algorithms, data structures, and artificial intelligence. In addition, this book will be of interest to practitioners working in all of these areas and to those interested in automatic programming.

Democracy in a Technological Society Society for Philosophy & Technology (U.S.) 1992-11-30 What is the relationship between democracy and technology? And what should that relationship be? This book explores these questions, drawing upon a wide range of philosophical, historical and sociological points of view. In stark contrast to technology's promise as a wellspring of equality, freedom and self-government, its development now poses a host of problems for political society: an alarming concentration of power over global production, a widening gap between rich and poor, multiple environmental crises, trivialization of politics in the mass media, decline of citizen competence in decision making, and the disproportionate influence of scientific and technical elites. As the writers discuss these issues, they investigate new avenues for democratic politics, possibilities that emerge as modernist ideas about progress, justice and the common good lose their ability to guide contemporary thought and action. This book will be of interest to philosophers, political scientists, those doing research on technology and society, engineers studying human factors, environmental scientists, sociologists.

House of Blues Julie Smith 1996 "ONE OF THE BEST OF THE SKIP LANGDON SERIES. . . In the fast-growing field of fictional female police officers, New Orleans Homicide Detective Skip Langdon stands tall." --St. Louis Post-Dispatch After prominent New Orleans restaurateur Arthur Hebert is murdered in his beautiful Garden District home, three family members suspiciously vanish: Hebert's

daughter, who was soon to have taken over the management of his restaurant, his ex-addict son-in-law, and his small granddaughter--all missing without a trace. A kidnapping gone wrong? Homicide Detective Skip Langdon thinks it's possible, but why should the kidnapers have taken three hostages when one would have been enough? Skip's hunt for a murderer and the missing Hebert heirs embraces worlds within worlds--the elegant, dangerous Garden District, the French Quarter, the seedy Treme, broken-down projects, exclusive mansions, and lowdown bars. It takes her into places where the city's dirty business is transacted, and those where life is mostly madness, sadness, and badness. It may even take Skip to her death. . . . 82 Desire Julie Smith 1998 Though the modern bus has long since replaced the streetcar in New Orleans, Desire is still the meanest street of them all. Now Police Detective Skip Langdon finds herself on its shady side in what at first appears to be a small case with some big names-- Councilwoman Bebe Fortier has misplaced her equally prominent husband. Yet Skip soon senses something big starting to unfold. Something rooted in corruption, resulting in violence--and motivated by that old demon . . . desire. Across town, Talba Wallis has a simple desire of her own--to find out what Russell Fortier's disappearance has to do with her. Wallis is a woman who leads three lives--poet, computer expert, and part-time detective once hired to spy on Fortier. But the private investigator she worked for can't help her out. He's lying in his office with a bullet in his chest. Reporter Jane Storey is also walking down that mean, sultry street--she's on the brink of the biggest story of her life. But she's got a bad feeling she's being played like a deck of cards. In fact, all three investigators--cop, private eye, and reporter--sense an unknown (and malevolent) presence pulling strings they cannot see. Smith's steamy masterpiece is a tale of desire running out of control . . . of

corporate greed, a lust for power, and a legacy of misery that only now must be set right--at a cost measured in blood and heartbreak and lives.

Making Social Science Matter Bent Flyvbjerg 2001-01-15 Making Social Science Matter presents an exciting new approach to the social and behavioral sciences including theoretical argument, methodological guidelines, and examples of practical application. Why has social science failed in attempts to emulate natural science and produce normal theory? Bent Flyvbjerg argues that the strength of social sciences lies in its rich, reflexive analysis of values and power, essential to the social and economic development of any society. Richly informed, powerfully argued, and clearly written, this book opens up a new future for the social sciences. Its empowering message will make it required reading for students and academics across the social and behavioral sciences.

The Big Crazy Julie Smith 2019-10-19 August 29, 2005 - Doomsday: New Orleans is eighty per cent underwater, with no electricity, no phones, no 911 service, no rules. Facing the complete breakdown of systems and normality, New Orleans homicide Detective Skip Langdon is on her own to interpret and execute the only direction she's given: Get out there and keep the peace. With communications down and all emergency services on search and rescue, all Skip can hope to accomplish is helping the person right in front of her. More than once that person turns out to be Billy, a gutsy 15-year-old from Treme who's in greater danger of being swamped by his chaotic home life than the Cat 5 hurricane Skip shelters him from. When she escorts him home and discovers the scene of a possible homicide, homicide detecting must take a back seat to maintaining order--if not peace. Outrageous rumors are swirling, stirring up unrest, but what really bothers her is the one about a police department order to use the chaos as a cover for "cleaning up" by rounding up criminals and assassinating them. Now that just can't be true. Can it? But after she hears it for the third time, Skip teams up with the only cop in the city she's positive she can trust, her former partner, movie-star handsome, kickass, praline-sweet Adam Abasolo. They may not be able to fix everything, but, as the bodies pile up, they are damn sure going to hit back at the guys who're giving their department a black eye. On any regular weekday, New Orleans lives up to its billing as *The Big Crazy*. In post-Katrina New Orleans, where the dirty cops and lunatics are running the asylum, author Julie Smith also takes us inside the actual asylum, Charity Hospital emergency psych unit, an unexpected oasis of comfort in stark contrast to endless amounts of ever-present filthy water and hordes of half-drowned people. Smith strikes just the right note, capturing the massive tragedy of the events and the inevitable comedy as the survivors struggle to make sense of the closest thing to hell squared

that any of them has ever seen. Mystery fans who love hard-boiled women sleuths, lots of action and adventure, and offbeat police procedurals will love Detective Skip Langdon.

Coral Reefs and Climate Change Jonathan Turnbull Phinney 2006-01-10 Published by the American Geophysical Union as part of the Coastal and Estuarine Studies, Volume 61. The effects of increased atmospheric carbon dioxide and related climate change on shallow coral reefs are gaining considerable attention for scientific and economic reasons worldwide. Although increased scientific research has improved our understanding of the response of coral reefs to climate change, we still lack key information that can help guide reef management. Research and monitoring of coral reef ecosystems over the past few decades have documented two major threats related to increasing concentrations of atmospheric CO₂: (1) increased sea surface temperatures and (2) increased seawater acidity (lower pH). Higher atmospheric CO₂ levels have resulted in rising sea surface temperatures and proven to be an acute threat to corals and other reef-dwelling organisms. Short periods (days) of elevated sea surface temperatures by as little as 1-2°C above the normal maximum temperature has led to more frequent and more widespread episodes of coral bleaching-the expulsion of symbiotic algae. A more chronic consequence of increasing atmospheric CO₂ is the lowering of pH of surface waters, which affects the rate at which corals and other reef organisms secrete and build their calcium carbonate skeletons. Average pH of the surface ocean has already decreased by an estimated 0.1 unit since preindustrial times, and will continue to decline in concert with rising atmospheric CO₂. These climate-related Stressors combined with other direct

anthropogenic assaults, such as overfishing and pollution, weaken reef organisms and increase their susceptibility to disease.

Putin's Totalitarian Democracy Kate C. Langdon 2019-07-09 This book studies the cultural, societal, and ideological factors absent from popular discourse on Vladimir Putin's Russia, contesting the misleading mainstream assumption that Putin is the all-powerful sovereign of Russia. In carefully examining the ideological underpinnings of Putinism—its tsarist and Soviet elements, its intellectual origins, its culturally reproductive nature, and its imperialist foreign policy—the authors reveal that an indoctrinating ideology and a willing population are simultaneously the most crucial yet

overlooked keys to analyzing Putin's totalitarian democracy. Because Putinism is part of a global wave of extreme political movements, the book also reaffirms the need to understand—but not accept—how and why nation-states and masses turn to nationalism, authoritarianism, or totalitarianism in modern times.

GENETIC WORLD: the Next Step Beyond Dan Brown's the Da Vinci Code, and Michael Crichton's Jurassic Park and West World Todd Easterling 2021-10 Todd Easterling, who has worked with HBO and was discovered by the Garon-Brooke Literary Agency of John Grisham fame, takes a big swing with Genetic World--clearly aiming at the religious and high concept intrigue that are reminiscent of the brilliant Dan Brown Robert Langdon series (Angels & Demons, The Da Vinci Code, The Lost Symbol, Inferno, Origin), and the suspenseful science-driven storytelling that was the hallmark of the late great Michael Crichton's visionary work in 1990's Jurassic Park and his iconic 1973 film Westworld. When Oxford professor Francesca Ferrari is invited to a press conference and VIP presentation by the world's two richest individuals--billionaire brothers Winston McCarthy and Ethan McCarthy--she is soon swept into the bizarre world surrounding their creation of Genetic World, the most innovative theme park and science R&D center in the world. Francesca is a renowned expert in ancient religions, iconography, soteriology--the study of salvation--and eschatology, the study of the "end of times." She and her longtime friend and acclaimed New York Times reporter, Sawyer Clemens, are asked by one of the brothers to investigate a highly sensitive archeological discovery--a controversial discovery that acclaimed real-life Oscar-winning film director James Cameron executive produced a documentary on. Francesca and Sawyer sort through

a series of clues that lead them to Jerusalem, Rome, Vatican City, Florence, and Paris. Eventually they uncover a discovery that will change history. They soon determine that Genetic World's billionaire founders have conflicting objectives for the theme park and R&D center, which are located on four real-world islands off the coast of San Diego and northern Mexico . . . essentially sovereign territory not under the control or laws of any country. One brother is intent on creating an educational and entertainment park that rivals Disney World and all other amusement parks--including fictional theme parks such as Jurassic Park and Westworld. The other brother has been up to activities that push the boundaries of ethics and science. The history is real. The locations are real. The science is real. Welcome to Genetic World . . . where nothing can go wrong. Enjoy your visit.
