New Business and Regulatory Strategies in the Postal Sector Pier Luigi Parcu 2019-02-13 This book addresses major issues facing postal and delivery services throughout the world. Worldwide, there is currently a considerable amount of interest in postal and delivery economics. The industry is reacting to a state of near crisis and is implementing different drastic changes. The European Commission and member States are still wrestling with the problem of how to implement entry liberalization into postal markets, how to address digital competition, and how to maintain the universal service obligation (USO). The Postal Accountability and Enhancement Act of 2006 in the U.S. has perhaps created and exacerbated the problems faced by USPS. Digitalisation, technological development and online platforms are strongly affecting both the way postal and delivery operators are managing their services as well as their role on the market. Strong emphasis was attributed to the assets of Postal Operators (POs) and their added value in the digital age as well as on new business strategies. This volume presents original essays by prominent researchers in the field, selected and edited from papers presented at this year's 26th Conference on Postal and Delivery Economics held in Split, Croatia, from May 30- June 2, 2018. Topics addressed by this volume include quality of service, last mile solutions, and competition in the liberalized market. This book will be a useful tool not only for graduate students and professors, but also for postal administrations, consulting firms, and federal government departments.

Strategies and Mechanisms for Electronic Markets Esther David 2010-09-02 This volume contains 18 thoroughly refereed and revised papers detailing recent advances in research on designing trading agents and mechanisms for agent-mediated e-commerce. They were originally presented at the 11th International Workshop on Agent-Mediated Electronic Commerce (AMEC 2009) collocated with AAMAS 2009 in Budapest, Hungary, or the 2009 Workshop on Trading Agent Design and Analysis (TADA 2009) collocated with IJCAI 2009 in Pasadena, CA, USA. The papers focus on topics such as individual agent behavior and agent interaction, collective behavior, mechanism design, and computational aspects, all in the context of e-commerce applications like trading, auctions, or negotiations. They combine approaches from different fields of mathematics, computer science, and economics such as artificial intelligence, distributed systems, operations research, and game theory.

Sustainability of the Agri-food System: Strategies and Performances

Bernardo De Gennaro 2014-11-01 The 2013 annual conference of the Italian Society of Agricultural Economics (SIDEA) has been held in the attractive scenario of the city of Lecce under the organization of three different Universities of the Apulia Region (Università degli Studi di Bari, Università degli Studi di Foggia and Università del Salento). The scientific theme of the 50th SIDEA Conference has been "Sustainability of the agri-food system: Strategies and Performances" (Sostenibilità del Sistema Agroalimentare: strategie e performance). With such a topic, the SIDEA intended to cope with the challenges coming from a growing demand of food in a world where critical natural resources such as water, energy and land are becoming increasingly scarce and climate change is posing credible threats. The agri-food system and the broader bio-based economy are, in fact, human activities where the classic dimensions of sustainability (ecological, economic and social) are gaining a striking weight often showing evidence of frictions. Despite a significant growth in food production over the past century, today one of the most important challenges facing agro-food system is how to feed a growing population.

Adapting Buildings and Cities for Climate Change David Crichton 2009-10-26 From the bestselling author of Ecohouse, this fully revised edition of *Adapting Buildings and Cities for Climate Change* provides unique insights into how we can protect our buildings, cities, infra-structures and lifestyles against risks associated with extreme weather and related social, economic and energy events. Three new chapters present evidence of

escalating rates of environmental change. The authors explore the growing urgency for mitigation and adaptation responses that deal with the resulting challenges. Theoretical information sits alongside practical design guidelines, so architects, designers and planners can not only see clearly what problems they face, but also find the solutions they need, in order to respond to power and water supply needs. Considers use of materials, structures, site issues and planning in order to provide design solutions. Examines recent climate events in the US and UK and looks at how architecture was successful or not in preventing building damage. *Adapting Buildings and Cities for Climate Change* is an essential source, not just for architects, engineers and planners facing the challenges of designing our building for a changing climate, but also for everyone involved in their production and use.

Affecting Change Karen S. Haynes 2006 An action-oriented text, the Sixth Edition of *Affecting Change* continues to provide new ideas and strategies to help students become better advocates for their future clients. Updated to reflect advances in technology and changes in social welfare policy, this revision shows students how to develop political action skills. This practical, step-by-step guide focuses on advocacy as the central mission of social work practice. New material and personal scenarios involving social workers who have made a difference-senators, representatives, and officials in the political arena-serve to inspire students. Revised and expanded chapters show how social work skills can be most effective, whether by impacting the political arena as a social worker or running for office.

Services of General Interest and Territorial Cohesion Heinz Faßmann 2015-10-28 European societies and economies continue to rely on Services of General Interest (SGI) to produce legitimacy. Fair access to basic services such as transport, energy and communication infrastructures, education and health care is regarded as a cornerstone of the 'European Model of Society', as

a way to promote Territorial Cohesion and lastly, as a right held by every EU citizen. These collective, regional and individual perspectives on Services of General Interest are in the focus of this edited volume. In the light of postmodern societies, demographic aging, migratory patterns, globalization and economic crises territorially sensitive challenges arise and targeted solutions are needed accordingly.

Invasion Dynamics Cang Hui 2017-02-15 Humans have moved organisms around the world for centuries but it is only relatively recently that invasion ecology has grown into a mainstream research field. This book examines both the spread and impact dynamics of invasive species, placing the science of invasion biology on a new, more rigorous, theoretical footing, and proposing a concept of adaptive networks as the foundation for future research. Biological invasions are considered not as simple actions of invaders and reactions of invaded ecosystems, but as co-evolving complex adaptive systems with emergent features of network complexity and invasibility. *Invasion Dynamics* focuses on the ecology of invasive species and their impacts in recipient social-ecological systems. It discusses not only key advances and challenges within the traditional domain of invasion ecology, but introduces approaches, concepts, and insights from many other disciplines such as complexity science, systems science, and ecology more broadly. It will be of great value to invasion biologists analyzing spread and/or impact dynamics as well as other ecologists interested in spread processes or habitat

management.

Conditionality and Coercion Isabela Mares 2019-10-17 In many recent democracies, candidates compete for office using illegal strategies to influence voters. In Hungary and Romania, local actors including mayors and bureaucrats offer access to social policy benefits to voters who offer to support their preferred candidates, and they threaten others with the loss of a range of policy and private benefits for voting the "wrong" way. These quid pro quo exchanges are often called clientelism. How can politicians and their accomplices get away with such illegal campaigning in otherwise democratic, competitive elections? When do they rely on the worst forms of clientelism that involve threatening voters and manipulating public benefits?

Conditionality and Coercion: Electoral Clientelism in Eastern Europe uses a mixed method approach to understand how illegal forms of campaigning including vote buying and electoral coercion persist in two democratic countries in the European Union. It argues that we must disaggregate clientelistic strategies based on whether they use public or private resources, and whether they involve positive promises or negative threats and coercion. We document that the type of clientelistic strategies that candidates and brokers use varies systematically across localities based on their underlying social coalitions. We also show that voters assess and sanction different forms of clientelism in different ways. Voters glean information about politicians' personal characteristics and their policy preferences from the clientelistic strategies these candidates deploy. Most voters judge candidates who use clientelism harshly. So how does clientelism, including its most odious coercive forms, persist in democratic systems? This book suggests that politicians can get away with clientelism by using forms of it that are in line with the policy preferences of constituencies whose votes they need. Clientelistic and programmatic strategies are not as distinct as previous have argued. *Oxford Studies in Democratization* is a

series for scholars and students of comparative politics and related disciplines. Volumes concentrate on the comparative study of the democratization process that accompanied the decline and termination of the cold war. The geographical focus of the series is primarily Latin America, the Caribbean, Southern and Eastern Europe, and relevant experiences in Africa and Asia. The series editor is Laurence Whitehead, Senior Research Fellow, Nuffield College, University of Oxford.

Climate Technology Strategies 2 Pantelis Capros 2012-12-06 Climate technology becomes more and more relevant in international environmental policy negotiations. At the Kyoto conference binding emission reduction targets have been established for several regions of the world. The major challenge is how to realize these reduction goals with minimum costs without generating new distributional and social difficulties. The book analyses the macroeconomic structural and distributional impacts of greenhouse gas mitigation strategies for the EU and the member states.

Stabilization, Safety, and Security of Distributed Systems Andréa W. Richa 2012-09-28 This book constitutes the refereed proceedings of the 14th International Symposium on Stabilization, Safety, and Security of Distributed Systems, SSS 2012, held in Toronto, Canada, in October 2012. The 21 full papers and 10 brief announcements presented in this volume

were carefully reviewed and selected from 75 submissions. The conference provides a wide spectrum of topics, covered in the following tracks: self-stabilization, ad-hoc and sensor networks, fault-tolerance and dependable systems, safety and security, cloud computing, formal methods, social networks, peer-to-peer, self-organizing and autonomic systems.

Pain Management and the Opioid Epidemic National Academies of Sciences, Engineering, and Medicine 2017-09-28 Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic, with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.

The Political Economy of Public Finance Marc Buggeln 2017-02-23 This volume examines the major trends in public finance in developed capitalist countries since the oil crisis of 1973. That year's oil shock quickly became an economic crisis, putting an end to a period of very high growth rates and an era of easy finance. Tax protests and growing welfare costs often led to rising debt levels. The change to floating exchange rates put more

power in the hand of markets, which corresponded with a growing influence of neo-liberal thinking. These developments placed state finances under considerable pressure, and leading scholars here examine how the wealthiest OECD countries responded to these challenges and the consequences for the distribution of wealth between the rich and the poor. As the case studies here make clear, there was no simple 'race to the bottom' in taxation and welfare spending: different countries opted for different solutions that reflected their political and economic structures.

Digital Transformation and Public Services (Open Access)

Anthony Larsson 2019-10-08 Through a series of studies, the overarching aim of this book is to investigate if and how the digitalization/digital transformation process affects various welfare services provided by the public sector, and the ensuing implications thereof. Ultimately, this book seeks to understand if it is conceivable for digital advancement to result in the creation of private/non-governmental alternatives to welfare services, possibly in a manner that transcends national boundaries. This study also investigates the possible ramifications of technological development for the public sector and the Western welfare society at large. This book takes its point of departure from the 2016 Organization for Economic Co-operation and Development (OECD) report that targets specific public service areas in which government needs to adopt new strategies not to fall behind. Specifically, this report emphasizes the focus on digitalization of health care/social care, education, and protection services, including the use of assistive technologies referred to as "digital welfare." Hence, this book explores the factors potentially leading to whether state actors could be overrun by other non-governmental actors, disrupting the current status quo of welfare services. The book seeks to provide an innovative, enriching, and controversial take on society at large and how various aspects of

the public sector can be, and are, affected by the ongoing digitalization process in a way that is not covered by extant literature on the market. This book takes its point of departure in Sweden given the fact that Sweden is one of the most digitalized countries in Europe, according to the Digital Economy and Society Index (DESI), making it a pertinent research case. However, as digitalization transcends national borders, large parts of the subject matter take on an international angle. This includes cases from several other countries around Europe as well as the United States.

Scenarios and Indicators for Sustainable

Development-Towards A Critical Assessment of

Achievements and Challenges Joachim H. Spangenberg 2019-03-14 Globalization and telecoupling are enhancing the complexity of the coupled socio-ecological system constituted by the interaction between the global ecosphere and the anthroposphere. As a result, the demand for tools to identify transformative innovations, assess future risks, and support precautionary decisions for sustainability is growing by the day in business and politics. Scenarios are a means of simplification, reducing the real-world complexity to a limited number of essential factors to analyze their interactions and support policy formulation, with indicators as communication and monitoring tools. In particular, in a time of “fake news” and “alternative truths” a critical reflection amongst producers and users of scenarios and indicators is overdue—the capability for critical self-reflection is what distinguishes science from pseudo-science, and is a condition of trust. The authors of this book test

established measurement and modeling approaches against new challenges, assess the weaknesses of prevailing innovation theories and the political-ideological embedment of archetypical scenarios, highlight deficits in taking the physical basics into account, and the need to understand global interaction and the stepwise process of energy transitions, point out technical as well as conceptual weaknesses in data collection, harmonization and indicator generation, always with a view to solving problems.

The Routledge Handbook on Livelihoods in the Global

South Fiona Nunan 2022-05-05 The Routledge Handbook on

Livelihoods in the Global South presents a unique, timely, comprehensive overview of livelihoods in low- and middle-income countries. Since their widespread adoption in the 1990s,

livelihoods perspectives, frameworks and methods have

influenced diverse areas of research, policy and practice. The

concept of livelihoods reflects the complexity of strategies and

practices used by individuals, households and communities to

meet their needs and live their lives. The Handbook brings

together insights and critical analysis from diverse approaches

and experiences, learning from research and practice over the

last 30 years. The Handbook comprises an introductory section on

key concepts and frameworks, followed by five parts, on

researching livelihoods, negotiating livelihoods, generating

livelihoods, enabling livelihoods and contextualising livelihoods.

The introduction provides readers with an appreciation of

concepts researched and applied in the five parts, including

chapters on vulnerability and resilience, social capital and

networks, and institutions. Each part reflects the diversity of

approaches taken to understanding livelihoods, whilst recognising

commonalities, including the centrality of power in shaping,

enabling and constraining livelihoods. The book also reflects

diversity of context, including conflict, climate change and

religion, as well as in generating livelihoods, through agriculture,

small-scale mining and pastoralism. The aim of each chapter is to

provide a critically informed introduction and overview of key concepts, issues and debates of relevance to the topic, with each chapter concluding with suggestions for further reading. It will be an essential resource to students, researchers and practitioners of international development and related fields. Researchers and practitioners will also benefit from the book's diverse disciplinary contributions and by the wide and contemporary coverage.

Travel Demand Management and Road User Pricing Gerd Sammer 2016-02-24 Throughout the world, traffic levels are increasing and, in urban areas, these increasing levels have led to pressures on the road networks which are causing serious economic, environmental and social problems. This book examines the full range of 'push and pull' Travel Demand Management measures. This covers areas of regulatory, pricing, planning and persuasive policies to encourage individuals to make their trips in off-peak periods, by a different mode or to find another way of carrying out the trip purpose. Applying such measures can result in a more efficient transport system, improved environmental conditions and improvements in safety as well as revenue generation for use on alternative transport systems. The editors conclude with a summary of findings within the book and suggestions for best future practice.

Decentralization In Health Care: Strategies And Outcomes

Saltman, Richard 2006-12-01 Exploring the capacity and impact of decentralization within European health care systems, this book examines both the theoretical underpinnings as well as practical experience with decentralization.

Social Policies and Public Action Lavinia Bifulco 2016-12-01 The concept of public action is a magnifying lens for shedding light on the plurality of institutional and social actors interacting in policies. Taking into account a changing social world that is redefining the State and its instruments, it is well suited for picking out transformations that have been affecting European social policies for some twenty years or so now: the territorial reorganization of powers; the spread of a public-private mix in the provision of services; the rise of new forms of collaborative governance; the institutionalization of the European agenda on social investment. This book examines social policies as normative and cognitive devices that contribute to organizing social life and are themselves moulded and redefined by it. The perspective of public action is located where it is possible to observe how these devices come into action, the powers and interests they help mobilize and the dynamics they generate. Policies thus appear as a tangle of rather diverse processes in which the erosion of the 'social' coexists with the emergence of innovative forms of social organization. Public action is the key tool that helps to deal with this tangle by posing the following questions. What vocabularies, significances and practices are set in motion by the 'social' today? What are the resources that fuel it? What powers are deployed in it?

Not Only the Poor Robert E Goodin 2018-07-20 Originally published in 1987 Not Only the Poor explores the self-interested involvement of the non-poor in the welfare state, particularly the middle class. Using evidence from Britain, America, and Australia, they show that the non-poor were crucial in the founding of the welfare state, and in all three countries the non-poor benefit extensively from key welfare programmes, including those ostensibly targeted on the poor. Goodin and Le Grand conclude that the beneficial involvement of the non-poor in the welfare state is probably inevitable, but this may be no bad thing, depending on the alternative and on the nature of the egalitarian ideal adopted.

Welfare futuro Walter Longo 2017-03-30T00:00:00+02:00 Esiste un generale consenso nell'affermare che la profonda crisi che stanno attraversando le nazioni e le economie europee, mediterranee in particolare, stia rimodellando le dinamiche sociali fondamentali, richiedendo nuove risposte di welfare, strutturalmente diverse da quelle conosciute. Il libro cerca di declinare qualitativamente e quantitativamente quali siano le trasformazioni sociali in essere e quali potrebbero essere i futuri possibili, alla luce delle evidenze disponibili e dell'opinione degli stakeholder (regolatori pubblici, produttori di servizi, opinion leader), avendo utilizzato al proposito la metodologia degli scenari. Alla luce degli scenari più probabili o più critici vengono proposte precise visioni di policy che possono contribuire a ricomporre i problemi sociali emergenti, rimodulando complessivamente il sistema di welfare in considerazione delle risorse realisticamente disponibili. Il libro si rivolge a coloro (cittadini, policy maker, produttori di servizi, studiosi) che vogliono capire le trasformazioni sociali in essere, i reali tassi di copertura dei bisogni garantiti dal welfare esistente, i gap che ci attendono e le possibili innovazioni di policy disponibili.
