**News in their Pockets** Ran Wei 2021-02-17 Since the debut of the iPhone in 2007, the mobile phone has become a quick, convenient, and immensely popular gateway for accessing and consuming news. With three billion mobile phone subscribers, Asian countries have led this seismic shift in news consumption. They provide a wide range of opportunities to study how, as mobile technology matures and becomes routinized, mobile news is increasingly subject to societal constraints and impositions of political power that reduce the democratic benefits of such news and call into question the application of these technological innovations within governments and societies. *News in Their Pockets* explores the societal, technological, and user-related factors behind why and how digital-savvy college students seek news via the mobile phone across Asia's most mobile cities--Shanghai, Hong Kong, Singapore, and Taipei. Situating cross-societal comparative analyses of mobile news consumption in Asia within a digital and global context, this volume outlines the evolution of the mobile phone to its prominence in disseminating news, offers predictors of patterns in mobile news consumption, investigates user needs and expectations, and illustrates future impacts on civic engagement from mobile news consumption. By examining the interplay between game-changing and empowering communication technology and constraining social systems, *News in Their Pockets* provides the framework necessary for constructive, continuing debates over the promise and peril of digital news and exposes our underlying reasoning behind the adoption of the mobile phone as the all-in-one media of choice to stay socialized, entertained, and informed in the modern digital age.

**Pocket Data Mining** Mohamed Medhat Gaber 2013-10-19 Owing to continuous advances in the computational power of handheld devices like smartphones and tablet computers, it has become possible to perform Big Data operations including modern data mining processes onboard these small devices. A decade of research has proved the feasibility of what has been termed as Mobile Data Mining, with a focus on one mobile device running data mining processes. However, it is not before 2010 until the authors of this book initiated the Pocket Data Mining (PDM) project exploiting the seamless communication among handheld devices performing data analysis tasks that were infeasible until recently. PDM is the process of collaboratively extracting knowledge from distributed data streams in a mobile computing environment. This book provides the reader with an in-depth treatment on this emerging area of research. Details of techniques used and thorough experimental studies are given. More importantly and exclusive to this book, the authors provide detailed practical guide on the deployment of PDM in the mobile environment. An important extension to the basic implementation of PDM dealing with concept drift is also reported. In the era of Big Data, potential applications of paramount importance offered by PDM in a variety of domains including security, business and telemedicine are discussed.

**Phosphodiesterases as Drug Targets** Sharron H. Francis 2011-06-21 Cyclic nucleotide phosphodiesterases (PDEs) are promising targets for pharmacological intervention. Multiple PDE genes, isoform diversity, selective expression and compartmentation of the isoforms, and an array of conformations of PDE proteins are properties that challenge development of drugs that selectively target this class of enzymes. Novel characteristics of PDEs are viewed as unique opportunities to increase specificity and selectivity when designing novel compounds for certain therapeutic

indications. This chapter provides a summary of the major concepts related to the design and use of PDE inhibitors.

U.S. Health in International Perspective National Research Council 2013-04-12 The United States is among the wealthiest nations in the world, but it is far from the healthiest. Although life expectancy and survival rates in the United States have improved dramatically over the past century, Americans live shorter lives and experience more injuries and illnesses than people in other high-income countries. The U.S. health disadvantage cannot be attributed solely to the adverse health status of racial or ethnic minorities or poor people: even highly advantaged Americans are in worse health than their counterparts in other, "peer" countries. In light of the new and growing evidence about the U.S. health disadvantage, the National Institutes of Health asked the National Research Council (NRC) and the Institute of Medicine (IOM) to convene a panel of experts to study the issue. The Panel on Understanding Cross-National Health Differences Among High-Income Countries examined whether the U.S. health disadvantage exists across the life span, considered potential explanations, and assessed the larger implications of the findings. U.S. Health in International Perspective presents detailed evidence on the issue, explores the possible explanations for the shorter and less healthy lives of Americans than those of people in comparable countries, and recommends actions by both government and nongovernment agencies and organizations to address the U.S. health disadvantage.

**Lead Generation** Jörg Holenz 2016-03-16 In this comprehensive two-volume resource on the topic senior lead generation medicinal chemists present a coherent view of the current methods and strategies in industrial and academic lead generation. This is the first book to combine both standard and innovative approaches in comparable breadth and depth, including several recent successful lead generation case studies published here for the first time. Beginning with a general discussion of the underlying principles and strategies, individual lead generation approaches are described in detail, highlighting their strengths and weaknesses, along with all relevant bordering disciplines like e.g. target identification and validation, predictive methods, molecular recognition or lead quality matrices. Novel lead generation approaches for challenging targets like DNA-encoded library screening or chemical biology approaches are treated here side by side with established methods as high throughput and affinity screening, knowledge- or fragment-based lead generation, and collaborative approaches. Within the entire book, a very strong focus is given to highlight the application of the presented methods, so that the reader will be able to learn from real life examples.

The final part of the book presents several lead generation case studies taken from different therapeutic fields, including diabetes, cardiovascular and respiratory diseases, neuroscience, infection and tropical diseases. The result is a prime knowledge resource for medicinal chemists and for every scientist involved in lead generation.

**Social Outlook for Asia and the Pacific** United Nations ESCAP 2018-11-12 This publication points out that to reduce poverty in Asia and the Pacific, countries need to step up their investment in people, in particular on social protection, education and health care. This requires policymakers to identify the country-specific population groups that are disproportionately poor and deprived as well as the specific barriers that hinder their escape from poverty. *Managerial Decision Making Leadership* Caroline Wang 2011-03-23 The modern manager faces a bewildering range of challenges every single day. Their ability to make critical decisions, often under pressure, can directly determine the future success of the company and their career. It is therefore surprising that so few managers take the time to learn the art of decision making. In this groundbreaking book from Caroline Wang, readers will learn that quality decision making is a competence that can be acquired according to a simple framework. The framework is practical and easy-to-remember, consisting of two acronyms: GPA and IPO. GPA for decision content quality (Goal, Priority, Alternatives); and IPO for decision process quality (Information, People, Objective reasoning). The book places emphasis on leading a team to make decisions, even though the framework can be used for personal and individual decisions. By using this common decision-making framework, managers and leaders will gain credibility and team support for the decision, will confidently articulate, promote, and defend the decision, and will have made the necessary preparations for successful implementation when the decision-making process is complete. This proven framework from one of Asia's most dynamic leadership experts will improve the quality of your decisions and change the way you do business.

**Disease Control Priorities, Third Edition (Volume 9)** Dean T. The introductory chapters (1-3) in this volume take as their starting point the elements of the Essential Packages presented in the overview chapters of each volume. First, the chapter on intersectoral policy priorities for health includes fiscal and intersectoral policies and assembles a subset of the population policies and applies strict criteria for a low-income setting in order to propose a "highest-priority" essential package. Second, the chapter on packages of care and delivery platforms for universal health coverage (UHC) includes health sector interventions, primarily clinical and public health services, and uses the same approach to propose a highest priority package of interventions and policies that meet similar criteria, provides cost estimates, and describes a pathway to UHC.
