Infinite Powers Steven Strogatz 2019 From preeminent math personality and author of *The Joy of x*, a brilliant and endlessly appealing explanation of calculus - how it works and why it makes our lives immeasurably better. Without calculus, we wouldn't have cell phones, TV, GPS, or ultrasound. We

wouldn't have unraveled DNA or discovered Neptune or figured out how to put 5,000 songs in your pocket. Though many of us were scared away from this essential, engrossing subject in high school and college, Steven Strogatz's brilliantly creative, down-to-earth history shows that calculus is not about complexity; it's about simplicity. It harnesses an unreal number--infinity--to tackle real-world problems, breaking them down into easier ones and then reassembling the answers into solutions that feel miraculous. *Infinite Powers* recounts how calculus tantalized and thrilled its inventors, starting with its first glimmers in ancient Greece and bringing us right up to the discovery of gravitational waves (a phenomenon predicted by calculus). Strogatz reveals how this form of math rose to the challenges of each age: how to determine the area of a circle with only sand and a stick; how to explain why Mars goes "backwards" sometimes; how to make electricity with magnets; how to ensure your rocket doesn't miss the moon; how to turn the tide in the fight against AIDS. As Strogatz proves, calculus is truly the language of the universe. By unveiling the principles of that language, *Infinite Powers* makes us marvel at the world anew.

The Stuff of Stars Marion Dane Bauer 2022-05-24 Before the universe was formed, before time and space existed, there was ... nothing. But then ... BANG! Stars caught fire and burned so long that they exploded, flinging stardust everywhere. And the ash of those stars turned into planets. Into our Earth. And into us. The author takes readers from the trillionth of a second when our universe was born to the singularities that became each one of us, while illustrations capture the void before the Big Bang and the ensuing life that burst across galaxies. A blend of science and art, this picture book reveals the composition of our world and beyond - and how we are all the stuff of stars.

Between Page and Screen Kiene Brillenburg Wurth 2012 The contributors to this volume re-assess literary practice at the edges of paper, electronic media, and film. They show how the emergence of a new medium reinvigorates the book and the page as literary media, rather than announcing their impending death.

Critical Foundations in Young Adult Literature: Challenging Genres Antero Garcia

2013-10-11 Young Adult literature, from *The Outsiders* to Harry Potter, has helped shape the cultural landscape for adolescents perhaps more than any other form of consumable media in the twentieth and twenty-first century. With the rise of mega blockbuster films based on these books in recent years, the young adult genre is being co-opted by curious adult readers and by Hollywood producers. However, while the genre may be getting more readers than ever before, Young Adult literature remains exclusionary and problematic: few titles feature historically marginalized individuals, the books present heteronormative perspectives, and gender stereotypes continue to persist. Taking a critical approach, *Young Adult Literature: Challenging Genres* offers educators, youth librarians, and students a set of strategies for unpacking, challenging, and transforming the assumptions of some of the genre's most popular titles. Pushing the genre forward, Antero Garcia builds on his experiences as a former high school teacher to offer strategies for integrating Young Adult literature in a contemporary critical pedagogy through the use of participatory media.

Songs of Place and Time 2021-02-28 There is an established understanding that birdsong is rooted on the premise that each singing bird is only, or predominantly, concerned with intra-specific communication. Yet, on listening to the mass of birds singing at dawn we have intuitively described the phenomenon as a 'chorus'. A close analysis of the whole auditory scene suggests inter-specific

structure as well as intra-specific relationships, giving rise to the 'chorus' impression, rather than random cacophony. This publication explores how the arts can represent bird song in general and the dawn chorus in particular through ways that underline each chorus' specific nature of space and place, whilst avoiding the trap of projecting human phenomena onto the more-than-human world.

12 Rules for Life Jordan B. Peterson 2018-01-23 #1 NATIONAL BESTSELLER #1

INTERNATIONAL BESTSELLER What does everyone in the modern world need to know? Renowned psychologist Jordan B. Peterson's answer to this most difficult of questions uniquely combines the hard-won truths of ancient tradition with the stunning revelations of cutting-edge scientific research. Humorous, surprising and informative, Dr. Peterson tells us why skateboarding boys and girls must be left alone, what terrible fate awaits those who criticize too easily, and why you should always pet a cat when you meet one on the street. What does the nervous system of the lowly lobster have to tell us about standing up straight (with our shoulders back) and about success in life? Why did ancient Egyptians worship the capacity to pay careful attention as the highest of gods? What dreadful paths do people tread when they become resentful, arrogant and vengeful? Dr. Peterson journeys broadly, discussing discipline, freedom, adventure and responsibility, distilling the world's wisdom into 12 practical and profound rules for life. *12 Rules for Life* shatters the modern commonplaces of science, faith and human nature, while transforming and ennobling the mind and spirit of its readers.

The Architecture of Ruins Jonathan Hill 2019-03-25 *The Architecture of Ruins: Designs on the Past, Present and Future* identifies an alternative and significant history of architecture from the sixteenth century to the twenty-first century, in which a building is designed, occupied and imagined as a ruin. This design practice conceives a monument and a ruin as creative, interdependent and simultaneous

themes within a single building dialectic, addressing temporal and environmental questions in poetic, psychological and practical terms, and stimulating questions of personal and national identity, nature and culture, weather and climate, permanence and impermanence and life and death. Conceiving a building as a dialogue between a monument and a ruin intensifies the already blurred relations between the unfinished and the ruined and envisages the past, the present and the future in a single architecture. Structured around a collection of biographies, this book conceives a monument and a ruin as metaphors for a life and means to negotiate between a self and a society. Emphasising the interconnections between designers and the particular ways in which later architects learned from earlier ones, the chapters investigate an evolving, interdisciplinary design practice to show the relevance of historical understanding to design. Like a history, a design is a reinterpretation of the past that is meaningful to the present. Equally, a design is equivalent to a fiction, convincing users to suspend disbelief. We expect a history or a novel to be written in words, but they can also be delineated in drawing, cast in concrete or seeded in soil. The architect is a 'physical novelist' as well as a 'physical historian'. Like building sites, ruins are full of potential. In revealing not only what is lost, but also what is incomplete, a ruin suggests the future as well as the past. As a stimulus to the imagination, a ruin's incomplete and broken forms expand architecture's allegorical and metaphorical capacity, indicating that a building can remain unfinished, literally and in the imagination, focusing attention on the creativity of users as well as architects. Emphasising the symbiotic relations between nature and culture, a building designed, occupied and imagined as a ruin acknowledges the coproduction of multiple authors, whether human, non-human or atmospheric, and is an appropriate model for architecture in an era of increasing climate change.

Magical Realism and Literature Christopher Warnes 2020-11-12 Magical realism can lay claim to

being one of most recognizable genres of prose writing. It mingles the probable and improbable, the real and the fantastic, and it provided the late-twentieth century novel with an infusion of creative energy in Latin America, Africa, Asia, and beyond. Writers such as Alejo Carpentier, Gabriel García Márquez, Isabel Allende, Salman Rushdie, Ben Okri, and many others harnessed the resources of narrative realism to the representation of folklore, belief, and fantasy. This book sheds new light on magical realism, exploring in detail its global origins and development. It offers new perspectives of the history of the ideas behind this literary tradition, including magic, realism, otherness, primitivism, ethnography, indigeneity, and space and time.

This book provides a complete guide to what to do, how to do it, when to do it, and the major pitfalls involved. This is a comprehensive guide to all that an architecture student might need to know about undertaking the dissertation, including new material on CD-ROM and online sources, web based research techniques, digital images, alternative imaging strategies, key architecture links, referencing and new dissertation extracts. It clearly navigates the student through the whole process of writing, preparing and submitting a dissertation, as well as suggesting what to do after the dissertation has been completed. The Arts of India, Southeast Asia, and the Himalayas at the Dallas Museum of Art Dallas Museum of Art 2013 In recent years, the Dallas Museum of Art has expanded its collection of South Asian art from a small number of Indian temple sculptures to nearly 500 works, including Indian Hindu and Buddhist sculptures, Himalayan Buddhist bronze sculptures and ritual objects, artwork from Southeast Asia, and decorative arts from India's Mughal period. Artworks in the collection have origins from the former Ottoman empire to Java, and architectural pieces suggest the grandeur of buildings in the Indian tradition. This volume details the cultural and artistic significance of more than 140 featured works, which range from Tibetan thangkas and Indian miniature paintings to stone sculptures and bronzes. Relating these works to one another through interconnecting narratives and cross-references, scholars and curators provide a broad cultural history of the region. The Anime Machine Thomas Lamarre 2013-11-30 Despite the longevity of animation and its significance within the history of cinema, film theorists have focused on live-action motion pictures and largely ignored hand-drawn and computer-generated movies. Thomas Lamarre contends that the history, techniques, and complex visual language of animation, particularly Japanese animation, demands serious and sustained engagement, and in *The Anime Machine* he lays the foundation for a new critical theory for reading Japanese animation, showing how anime fundamentally differs from

other visual media. The *Anime Machine* defines the visual characteristics of anime and the meanings generated by those specifically “animetic” effects—the multiplanar image, the distributive field of vision, exploded projection, modulation, and other techniques of character animation—through close analysis of major films and television series, studios, animators, and directors, as well as Japanese theories of animation. Lamarre first addresses the technology of anime: the cells on which the images are drawn, the animation stand at which the animator works, the layers of drawings in a frame, the techniques of drawing and blurring lines, how characters are made to move. He then examines foundational works of anime, including the films and television series of Miyazaki Hayao and Anno Hideaki, the multimedia art of Murakami Takashi, and CLAMP’s manga and anime adaptations, to illuminate the profound connections between animators, characters, spectators, and technology. Working at the intersection of the philosophy of technology and the history of thought, Lamarre explores how anime and its related media entail material orientations and demonstrates concretely how the “animetic machine” encourages a specific approach to thinking about technology and opens new ways for understanding our place in the technologized world around us.

Relive Sean Cubitt 2013-11-08 Leading historians of the media arts define a new materialist media art history, discussing temporality, geography, ephemerality, and the future. In *Relive*, leading historians of the media arts grapple with this dilemma: how can we speak of “new media” and at the same time write the histories of these arts? These scholars and practitioners redefine the nature of the field, focusing on the materials of history—the materials through which the past is mediated. Drawing on the tools of media archaeology and the history and philosophy of media, they propose a new materialist media art history. The contributors consider the idea of history and the artwork's moment in time; the intersection of geography and history in regional practice, illustrated by

examples from eastern Europe, Australia, and New Zealand; the contradictory scales of evolution, life cycles, and bodily rhythms in bio art; and the history of the future—how the future has been imagined, planned for, and established as a vector throughout the history of new media arts. These essays, written from widely diverse critical perspectives, capture a dynamic field at a moment of productive ferment.
