The Ice-Blue Bones of Telluride Sylvan S. Bald 2015-05-22 In 2011, twelve-year old Sylvan Bald didn't want to go on a hike with his parents on Thanksgiving Day. He would much rather have stayed home to read his new book or play with his toy bricks. Fortunately for him and for the rest of us, he reluctantly agreed to go. Once on the trail, he was happy to be outside on this gorgeous fall day in the San Juan Mountains in Southwest Colorado. Being an avid rock hound, he ran up and down the trail looking all around at stones - pocketing those that struck his fancy and picking up walking sticks along the way. Since a young child, Sylvan had gotten the nickname "Finder of Many Treasures" for he was always spotting interesting or unusual items wherever he went -- be it a parking lot in a big city or a remote forest trail. On this fine day, it proved to be the same. Out of the corner of his eye, Sylvan saw some blue stones embedded in a bigger rock right off the trail. However, they looked different. To him, they looked like bones that he had seen in a museum. Whose were they? How did they get here? Why were they blue? Read this exciting story of how a young Coloradan explorer was able to discover the first known dinosaur bones in Ilium Valley and how they were recovered and displayed at the Telluride Historical Museum. Stop and wonder - just what else might be out in the San Juan Mountains or even in your local woods to be discovered!

gallant gentleman, Captain L. E. G. Oates of the Inniskilling Dragoons. In March 1912, returning from the Pole, he walked willingly to his death in a blizzard to try to save his comrades, beset by hardship." —Inscription on a cross placed near presumed final resting place of Antarctic explorer Lawrence "Titus" Oates, The Terra Nova Expedition, 1910-1913 "We have one survival bag for every two people." —Antarctic paleontologist William Hammer, Transantarctic Vertebrate Paleontology Project, 2004 "When the ice cracks, it can sound like massive thunder rolls that seem to go on forever. If it is a serious cracking in the ice, it literally sounds like canon shots." —Eighth-grade science teacher and Antarctic diver Robin Ellwood, Lake Ecosystems in Antarctica Project, 2008-2009 Humanity's fascination with the land at the bottom of the globe dates back at least to the ancient Romans, who imagined Terra Australis Incognita—the "unknown southern land"—and drew it on their maps even though no one had ever seen it. It took a thousand years for this unknown land to become known. Despite the many people who have since visited it, conquering the Antarctic frontier is a never-ending challenge that calls scientists and explorers to risk their lives in the pursuit of knowledge. Frozen Secrets is the tale of a continent, the inside story of the critical, cutting-edge research that brave men and women from around the world have done and still do in Antarctica. Sally M. Walker traces expeditions from the earliest explorers to today's research stations, where contemporary scientists work in some of the harshest conditions on Earth. Whether they study the formation of polar ice or the stratigraphy of ancient rock or the fossils of newly discovered dinosaurs or the chemistry of air trapped in miniscule frozen bubbles, the scientists working in Antarctica are building a body of knowledge that will influence future generations as they make choices that could affect the course of the whole planet.
