How Tobacco Smoke Causes Disease 2010 This report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke. Many Surgeon General's reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies. Mechanisms of disease are important because they may provide plausibility, which is one of the guideline criteria for assessing evidence on causation. This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke. This evidence is relevant to understanding how smoking causes disease, to identifying those who may be particularly susceptible, and to assessing the potential risks of tobacco products.

Evolution Impossible John Ashton 2012-06-23 There is scientific evidence proving evolution cannot be responsible for life on Earth. It is time to question what biology text books and nature documentaries claim about our origins. Even Darwin admitted, "I threw out queries, suggestions, wondering all the time over everything; and to my astonishment the ideas took like wildfire. People made a religion of them." Dr. John Ashton has dedicated 40+ years to teaching and researching science, and exposing the lack of proven evidence for Darwin's theories. In *Evolution Impossible*, he uses discoveries in genetics, biochemistry, geology, radiometric dating, and other scientific disciplines to explain why the theory of evolution is a myth. Discover for yourself: Why the fossil record is evidence of extinction, not evolution How erosion and sedimentation dates conflict with radiometric dating How the lack of transitional fossils undermines evolutionary notions Why living cells and new organisms do not rise by chance or random mutations Regardless of your level of scientific education, you will finish this book able to cite 12 reasons why evolution cannot explain the origin of life.

Ecology and Evolution of the Grass-Endophyte Symbiosis Gregory P. Cheplick 2009-02-23 Endophytic fungi are common and diverse in plants. Yet the nature of their interactions with host plants, and how these interactions cascade upward to communities and ecosystems, is largely unknown. In the first book of its kind, Gregory P. Cheplick and Stanley H. Faeth synthesize existing studies of endophyte-grass symbioses within the context of modern ecological and evolutionary concepts. The authors cover a broad range of topics including the effects of endophytes on herbivory, host growth, physiology, reproduction, and competitive ability in a variety of grasses and environments. Clearly and engagingly written, Ecology and Evolution of the Grass-Endophyte Symbiosis highlights the most essential aspects of symbiosis ecology and evolution while suggesting avenues for future research.

Antonin Artaud and the Healing Practices of Language Joeri Visser 2021-06-03 The life of Antonin Artaud (1896-1948) was tormented by physical and mental illnesses. Already in his earlier works, Artaud tried to express his physical and mental suffering, but perceived, in describing his feelings, the obstructive and illness-inducing role of language. This is the first book written in English that analyses the role of a healing language with which Artaud engaged in his later writings. Joeri Visser guides us through the years in which Artaud suffered increasingly from mental instability and considered the act of writing his only means of survival. In doing so, Visser unfolds a literary and a philosophical analysis of how language and life work together and how a creative play with language can help us to reengage sustainably with the joyous as well as the terrible forces of life.

Dielectric Relaxation in Biological Systems Valerica Raicu 2015-07-23 The study of dielectric properties of biological systems and their components is important not only for fundamental scientific knowledge but also for its applications in medicine, biology, and biotechnology. The associated technique - known as dielectric spectroscopy - has enabled researchers to quickly and accurately acquire time- or frequency-spectra of permittivity and conductivity and permitted the derivation and testing of realistic electrical models for cells and organelles. This text covers the theoretical basis and practical aspects of the study of dielectric properties of biological systems, such as water, electrolyte and polyelectrolytes, solutions of biological macromolecules, cells suspensions and cellular systems. The authors' combined efforts provide a comprehensive and cohesive book that takes advantage of the expertise of multiple scientists involved in cutting-edge research in the specific sub-fields of bio-dielectric spectroscopy while maintaining its self-consistency through numerous discussions. The first six chapters cover theoretical, methodological and experimental aspects of relaxation and dispersion in biological dielectrics at molecular, cellular and cellular aggregate level. Applications are presented in the following chapters which are organized in the order of increased complexity, beginning with pure water, amino acids and proteins, continuing with vesicles and simple cells such as erythrocytes, and then with more complex, organelle-containing cells and cellular aggregates. Due to its broad coverage, the text could be used as a reference book by researchers, and as a textbook for upper-level undergraduate classes and graduate classes in (bio) physics, medical physics, quantitative biology, and engineering.

This material is included for its reference value and for the benefit of professionals in microbiology, food science, nutrition, and related fields. This edition contains four new chapters, and with the exception of Chapter 15, which received only minor changes, the remaining chapters have undergone extensive revision. The new chapters are 17 (indicator organisms), 18 (quality control), 21 (listeriae and listeriosis), and 24 (animal parasites). Six chapters in the previous edition have been combined; they are represented in this edition by Chapters 12, 13, and 14. In the broad area of food microbiology, one of the challenges that an author must deal with is that of producing a work that is up to date.

Human and Machine Perception 2 Virginio Cantoni 2012-12-06 The following are the proceedings of the Third International Workshop on Human and Machine Perception held in Pavia, Italy, on September 14 -17, 1998. This edition has been under the auspices of two Institutions: the Cybernetic and Biophysics Group (GNCB) of the Italian National Research Council (CNR), the Centro Interdipartimentale di Scienze Cognitive, of Pavia University and the Centro Interdipartimentale Tecnologie della Conoscenza, of Palermo University. A wide spectrum of topics is covered in this series, ranging from computer perception to psychology and physiology of perception, for analysing and comparing biological and artificial approaches. The theme of this workshop was focused on "Emergence, Attention and Creativity". The workshop structure consisted of five modules each one composed of two invited lectures (dealing with solutions in nature and machines respectively) and a panel discussion. The lectures focused on presenting the state-of-the-art and outlining open questions. In particular, they sought to stress links, suggesting possible synergies between different cultural areas. The panel discussion was conceived as a forum for an open debate, briefly introduced by each panellist, and mainly aimed at deeper investigation for the different approaches and strictly related topics. The panellists were asked to prepare a few statements on hot-points, which were delivered in advance to the participants as a guide for a qualified discussion.

This revised work reflects the convergent themes noted across approaches to psychotherapy. Several of the earlier contributions have been updated and offer more contemporary views. Finally, the editors present the synthesis of the contributions and describe possible directions for the cognitive focus over the next two decades. Contributors include Bowlby, Frankl, Miehl, Frank, Arieti, Bandura, Adler, Ellis, Scrimaldi, and other world renowned theorists and psychotherapists.
