**Living With Dyslexia** Barbara Riddick 2009-09-10 This book reinforces the need for understanding and support for children with dyslexia from parents and teachers, but also the importance of the children's own understanding of their strengths and weaknesses in order to fulfil their potential. It should be recommended reading for all those involved in dyslexia. - Professor Angela Fawcett, Director of the Centre for Child Research, Swansea University What is it like living with dyslexia on a day-to-day basis? Based on interviews with dyslexic children and their families, this insightful book presents first-hand accounts of how dyslexia affects the children themselves and the people around them. Living with Dyslexia, Second Edition places the original fascinating findings within the context of current research and practice in the UK, Europe, Australia and the USA. The author: examines issues of confidence and self-esteem; explores the coping strategies adopted by children and adults with dyslexia; investigates the concept of dyslexia-friendly schools; studies how children were first identified as having dyslexia, and the social and emotional difficulties they encountered; offers guidance on how teachers and parents can best support children with specific learning difficulties; considers the cognitive, educational, social and emotional perspectives in order for teachers and parents to gain a better understanding of dyslexia. This new edition provides an updated account of cognitive research and examines important changes in relation to Special Educational Needs policy and practice in the last ten years, including the Revised SEN Code of Practice (2001), Removing Barriers to Achievement (2004) and the National Literacy Strategy (2006). Living with Dyslexia recognises that the voices of children with dyslexia are increasingly important in developing good educational practice and makes an important contribution to the literature on dyslexia.

This book is the most up-to-date summary of his thinking and includes accessible descriptions of his tools and methods for cognitive modifiability and mediated learning. With dramatic case studies throughout the text, Feuerstein and his co-authors define intelligence as a dynamic force that drives the human organism to change the structure of thinking in order to answer the needs it encounters. They describe in detail the specific skills of the three stages of thinking: input or observation and data-gathering stage; development or processing stage; and output stage, including analysis, synthesis, and communication. They show how student thinking can stall in multiple ways at any of these stages and how intentional mediation can help students restructure their thinking and improve their ability to learn. Similarly to cognitive mediated learning, the authors address mediation of social and emotional skills that impact learning.

Dyslexia? Assessing and Reporting Gill Backhouse 2005 There is now a greater need than ever before to assess, record and respond appropriately to the special needs of individuals. Specialist teachers, SENCOs and learning support managers - all have a statutory duty to see that individual needs are identified, from the early years to further and higher education. This book focuses on the purposes, principles and practicalities of assessing for dyslexia across successive age groups, exploring the changing assessment issues and specific assessment needs. It looks at the available types of assessments at each stage, explaining how to interpret results and how and when to involve other professionals. Throughout, special emphasis is placed upon the need to cooperate and communicate effectively with others - pupils/students, their parents, class teachers, administrators and fellow professionals - to ensure that appropriate intervention and follow-up support are forthcoming. Assessments are needed to diagnose, to plan intervention, to inform school/college policies, to support claims for funding, to justify special arrangements in examinations, and more. These very different purposes require specialist teachers and support managers to have a firm grasp of relevant legislation and professional guidelines, to select appropriate assessments and provide reports that will meet their intended purpose. *Assessing for Dyslexia* will enable you to achieve this! Down to earth, and with numerous examples, this book provides the practical guidance needed by specialist teachers and educational professionals in training, as well as by SENCOs and learning support staff working in schools and colleges.

**How Dyslexics Learn** Kate Saunders 2002-03-01

*Dyslexia* Dr Helen Liker 2012-08-31 Many children spend their entire school lives struggling with their school work. Research has shown that at

least 10-15 per cent of children with apparently normal learning ability will have a significant problem with school learning. They may feel that whatever they do it is not good enough - either for their parents, their teachers or indeed themselves. This can often result in feelings of demoralisation, and even alienation from learning and school. This book aims to address these issues and to help parents understand and deal with them. *Dyslexia: A Parents' Guide* starts by correcting common misconceptions of learning difficulties that are rife in the press and popular literature, and addresses the conflicting approaches and advice from 'experts'. This authoritative guide then moves through diagnosis - with information on dyslexia, dyspraxia, ADHD, dyscalculia and more - to offering practical and easy tips to enable parents to help their child overcome their learning difficulty. Both authors are practising psychologists with extensive knowledge and experience of children's learning difficulties. They will show parents how to develop a successful approach to assessing and subsequently managing their child's difficulties.

**Dyslexia and Effective Learning in Secondary and Tertiary Education** Morag Hunter-Carsch 2001-10-22 Recent policy initiatives illuminate the need for greater teacher awareness about dyslexia in secondary and tertiary education. Yet the debates about dyslexia are often narrowly based and can exclude some teachers. This book attempts to open up the debate by bringing together different ways of talking and thinking about dyslexia. Fundamental questions about how to respond to dyslexia in teaching and support contexts are addressed and the significance of 'exploratory conversions' between learners and tutors is recognised. The need to restructure 'the structured approach' and to consider meta-affectivity as well as metacognition is explored. Practitioners in both secondary and tertiary sectors can gain ready access to contributions from internationally respected writers and teachers in the field. Alan Hurst's preface refers to 'this important book' as paving the way to a more truly inclusive attitude and approach to education in and beyond compulsory schooling.

**Support and aspiration** Great Britain: Department for Education 2011-03-09 This report unveils proposals for the biggest programme of reform in the education and health support for children with special educational needs (SEN) and disabilities in 30 years. The Government wants to fundamentally reform the SEN system to address problems including: parents having to battle to get the support their child needs; SEN statements not joining up education, health and care support; children falling between the gaps in services or having to undergo multiple assessments; multiple layers of paperwork and bureaucracy adding delays to getting support, therapy and vital equipment; confusing and adversarial assessment process, with the perceived conflict of interest where the local authority must provide SEN support as well as assess children's needs; too many children are being over-identified as SEN, preventing them from achieving their potential because teachers have lower expectations of them. The Government proposes to: include parents in the assessment process and introduce a legal right, by 2014, to give them control of funding for the support their child needs; replace statements with a single assessment process and a combined education, health and care plan so that health and social services is included in the package of support; ensure assessment and plans run from birth to 25 years old; replace the existing complicated School Action and School Action Plus system with a simpler new school-based category to help teachers focus on raising attainment; overhaul teacher training and professional development; inject greater independence from local authorities in assessments; give parents a greater choice of school and the power to set up special free schools

**Neurotribes** Steve Silberman 2016-08-23 This New York Times-bestselling book upends conventional thinking about autism and suggests a broader model for acceptance, understanding, and full participation in society for people who think differently. What is autism? A lifelong disability, or a naturally occurring form of cognitive difference akin to certain forms of genius? In truth, it is all of these things and more—and the future of our

society depends on our understanding it. Wired reporter Steve Silberman unearths the secret history of autism, long suppressed by the same clinicians who became famous for discovering it, and finds surprising answers to the crucial question of why the number of diagnoses has soared in recent years. Going back to the earliest days of autism research, Silberman offers a gripping narrative of Leo Kanner and Hans Asperger, the research pioneers who defined the scope of autism in profoundly different ways; he then goes on to explore the game-changing concept of neurodiversity. NeuroTribes considers the idea that neurological differences such as autism, dyslexia, and ADHD are not errors of nature or products of the toxic modern world, but the result of natural variations in the human genome. This groundbreaking book will reshape our understanding of the history, meaning, function, and implications of neurodiversity in our world.

A new paradigm is proposed whereby all teaching programmes utilise each learner's learning strengths - catering for dyslexic and SpLD adults and children involves vital teaching and learning approaches that are good practice for all.
