**Etymologies and Genealogies** R. Howard Bloch 1986-07 "Mr. Bloch has attempted to establish what he calls a 'literary anthropology.' The project is important and ambitious. It seems to me that Mr. Bloch has completely achieved this ambition." -Michel Foucault "Bloch's Study is a genuinely interdisciplinary one, bringing together elements of history, ethnology, philology, philosophy, economics and literature, with the undoubted ambition of generating a new synthesis which will enable us to read the Middle Ages in a different light. Stated simply, and in terms which do justice neither to the density nor the subtlety of his argument, Bloch's thesis is this: that medieval society perceived itself in terms of a vertical mode of descent from origins. This model is articulated etymologically in medieval theories of grammar and language, and is consequently reflected in historical and theological writings; it is also latent in the genealogical structure of the aristocratic family as it began to be organized in France in the twelfth century, and is made manifest in such systems of signs as heraldry and the adoption of patronymns. . . . It is an ingenious and compelling synthesis which no medievalist, even on this side of the Atlantic, can afford to ignore." -Nicholas Mann, Times Literary Supplement

**The Psychology of Magic and the Magic of Psychology** Amir Raz 2016-11-18 Magicians have dazzled audiences for many centuries; however, few researchers have studied how, let alone why, most tricks work. The psychology of magic is a nascent field of research that examines the underlying mechanisms that conjurers use to achieve enchanting phenomena, including sensory illusions, misdirection of attention, and the appearance of mind-control and nuanced persuasion. Most studies to date have focused on either the psychological principles involved in watching and performing magic or “neuromagic” - the neural correlates of such phenomena. Whereas performers

sometimes question the contributions that modern science may offer to the advancement of the magical arts, the history of magic reveals that scientific discovery often charts new territories for magicians. In this research topic we sketch out the symbiotic relationship between psychological science and the art of magic. On the one hand, magic can inform psychology, with particular benefits for the cognitive, social, developmental, and transcultural components of behavioural science. Magicians have a large and robust set of effects that most researchers rarely exploit. Incorporating these effects into existing experimental, even clinical, paradigms paves the road to innovative trajectories in the study of human behaviour. For example, magic provides an elegant way to study the behaviour of participants who may believe they had made choices that they actually did not make. Moreover, magic fosters a more ecological approach to experimentation whereby scientists can probe participants in more natural environments compared to the traditional lab-based settings. Examining how magicians consistently influence spectators, for example, can elucidate important aspects in the study of persuasion, trust, decision-making, and even processes spanning authorship and agency. Magic thus offers a largely underused armamentarium for the behavioural scientist and clinician. On the other hand, psychological science can advance the art of magic. The psychology of deception, a relatively understudied field, explores the intentional creation of false beliefs and how people often go wrong. Understanding how to methodically exploit the tenuous twilight zone of human vulnerabilities - perceptual, logical, emotional, and temporal - becomes all the more revealing when top-down influences, including expectation, symbolic thinking, and framing, join the fray. Over the years, science has permitted magicians to concoct increasingly effective routines and to elicit heightened feelings of wonder from audiences. Furthermore, on occasion science leads to the creation of novel effects, or the refinement of existing ones, based on systematic methods. For

example, by simulating a specific card routine using a series of computer stimuli, researchers have decomposed the effect and reconstructed it into a more effective routine. Other magic effects depend on meaningful psychological knowledge, such as which type of information is difficult to retain or what changes capture attention. Behavioural scientists measure and study these factors. By combining analytical findings with performer intuitions, psychological science begets effective magic. Whereas science strives on parsimony and independent replication of results, magic thrives on reproducing the same effect with multiple methods to obscure parsimony and minimise detection. This Research Topic explores the seemingly orthogonal approaches of scientists and magicians by highlighting the crosstalk as well as rapprochement between psychological science and the art of deception.

*Theatrical Events* 2022-06-08 Theatrical Events. Borders, Dynamics and Frames is written to develop the concept of 'Eventness' in Theatre Studies. The book as a whole stresses the importance of understanding theatre performances as aesthetic-communicative encounters of a wide range of agents and aspects. The Theatrical Event concept means not only that performers and spectators meet, but also that the specific mental sets, backgrounds and cultural contexts they bring in, strongly contribute to the character of a particular event. Moreover, this concept gives space to the study of the role societal developments – such as technological, political, economical or educational ones – play in theatrical events.

Fooling Houdini Alex Stone 2012-06-19 An exploration of the world of magic that teaches the reader many tricks--including how better to understand the real world. Alex Stone--journalist and part-time conjurer--is here to amaze you. But first he had to amaze his fellow magicians. Fooling Houdini is his fascinating, revealing, and nailbiting account of his attempt to win the 23rd World Championships of Magic, the "Magic Olympics," the largest and most prestigious competition of its kind. Alex Stone managed to qualify for entry and began preparing to astonish people who astonish others for a living. It didn't help his nerves that he was placed on the bill straight after Canadian magician Shawn Farquhar, winner of more magic competitions than anyone in history. Stone's preparations and participation provide his readers with in-depth exploration of the world of magic, and magic's meaning. He spills many professional secrets, arguing that what is important is to ask questions about what lies behind the tricks: how the mind perceives the world and parses everyday experience, about how the mind works--and why sometimes it doesn't, about why people need to believe. As we become more attuned to the limits of our own perception, we become better at distinguishing reality from illusion, at reading the angles and decoding the fine print, he says. We gain intuition and understanding into how people behave. We even learn ways to influence this behavior. This makes us less susceptible to all manner of deception. It is to gain and maintain this sixth sense that Alex Stone--a schoolboy prestidigitator--has continued performing magic well into adulthood. In Fooling Houdini he takes us into that other world, populated by truly astounding characters, and leaves us with a heightened sense of awareness about the supposedly real world.

**Career Development and Systems Theory** Wendy Patton 2014-05-12 Career Development and

Systems Theory: Connecting Theory and Practice offers practitioners, researchers and students a comprehensive introduction to, and overview of, career theory; introduces the Systems Theory Framework of career development; and demonstrates its considerable contemporary and innovative application to practice. A number of authors have identified the framework as one of a small number of significant innovations in the career development literature. The Systems Theory Framework of career development was developed to provide coherence to the career development field by providing a comprehensive conceptualisation of the many existing theories and concepts relevant to understanding career development. It is not designed to be a theory of career development; rather systems theory is introduced as the basis for an overarching, or metatheoretical, framework within which all concepts of career development, described in the plethora of career theories, can be usefully positioned and utilised in both theory and practice. It has been applied to the career development of children, adolescents and women. Since its first publication, the Systems Theory Framework has been the basis of numerous publications focusing on theoretical application and integration, practice and research, with a growing number of these by authors other than the framework developers. Its application across cultures also has been emphasised. The theoretical and practical unity of the Systems Theory Framework makes this book a worthy addition to the professional libraries of practitioners, researchers and students, new to, or experienced in, the field of career development.

*Under the Eye of the Clock* Christopher Nolan 2000 Oxygen-deprived for two hours at birth, Christopher Nolan lived to write, at age twenty-one, the autobiography of his childhood, told as the story of Joseph Meehan. He wrote the book, using a "unicorn stick" attached to his head, letter by painful letter. The result is astonishingly lyrical, filled with powerful description, touching moments of triumph and humiliation, and, above all, disarming wit. It is, in the words of London's Daily Express, "a book of sheer wonder".

**James Joyce** Robert H. Deming 1977

**Zuñi Breadstuff** Frank Hamilton Cushing 1920 The author lived as an adopted member of the Zuni tribe from 1879 to 1884. He examined and recorded information about the food products of the Zuni and their methods of food preparation, their myths, ceremonies, and daily customs.

**Risorgimento in Exile** Maurizio Isabella 2009-08-27 Exile represented a fundamental experience in shaping Italian national identity. This book investigates the contribution of the Italian exile community in Europe and Latin America in the post Napoleonic era to imagining a new Italian political and economic community. By looking at the writings of such exiles, the book challenges

recent historiography regarding the lack of genuine liberal culture in the Risorgimento. It argues that these émigrés' involvement in debates with British, continental, and American intellectuals, points to the emergence of liberalism and Romanticism as international ideologies shared by a community of patriots from Southern Europe as well as Latin America, and demonstrates that the Risorgimento first developed as a variation upon such global trends.

*Sports Geography* John Bale 2003 In this fully revised and updated edition of his classic, discipline-defining text, John Bale comprehensively explores the relationships between sport, place, location and landscape.

**The Wiley-Blackwell Companion to Human Geography** John A. Agnew 2011-03-01 This volume provides an up-to-date, authoritative synthesis of the discipline of human geography. Unparalleled in scope, the companion offers an indispensable overview to the field, representing both historical and contemporary perspectives. Edited and written by the world's leading authorities in the discipline Divided into three major sections: Foundations (the history of human geography from Ancient Greece to the late nineteenth century); The Classics (the roots of modern human geography); Contemporary Approaches (current issues and themes in human geography) Each contemporary issue is examined by two contributors offering distinctive perspectives on the same theme

**Dark Matter of the Mind** Daniel L. Everett 2016-11-15 This book is an exploration of interrelationships among culture, language, and the individual unconscious (the "dark matter of the mind"), how these feed into a sense of self, and implications for the notion of "human nature." The first part of the book is concerned with perceptual and cultural bases of dark matter and the effect of dark matter on perception (especially vision) and the interpretation of discourse. The second part is concerned with the contribution of dark matter to language--with language viewed as a

combination of speech and gesture, and including issues related to translation. In the final part Everett addresses implications of his account, summarizing and extending arguments for replacing an instinct-based account of human nature with a culturally-based, dark matter view of the "constructed self." Everett makes a powerful argument for the influence of culture on unconscious forces that underlie human behavior and the individual's sense of self, with much of the power of the argument coming from the deep insights he gained from living and working with the Pirahãs of the Amazon. This is an important book that sits at the intersection of anthropology, linguistics, psychology, and philosophy, and it is enriched by a combination of the author's knowledge of these fields and his cross-cultural perspective. The book will make an important contribution to newly emerging directions taken by cognitive science. After decades of a field derailed by ethnocentric, instinct-based views of language and the mind, the cognitive sciences need such informed analyses of the relationship between culture, cognition, and language, as embodied in speech and gesture.

**The Buddha, Geoff and Me** Edward Canfor-Dumas 2013-05-03 Ed is having a hard time - at work, in his love life and, well, generally. Then he meets an unlikely Buddhist - who drinks and smokes and talks his kind of language. Bit by bit, things begin to change... Ed doesn't always take Geoff's advice. Or, when he does he lapses at the crucial moment. His path to understanding is not a straight one, especially as life keeps throwing more and more 'stuff' at him. Often he fails - like most of us, in fact. But sometimes he manages to get it right. And when he does, surprising things begin to happen ... In **The Buddha, Geoff and Me** Edward Canfor-Dumas brings all his skills to bear in an absorbing story of everyday city life, where the characters stand out with all their human strengths and weaknesses,

and the ending brings Ed - and perhaps all of us? - a hope we didn't necessarily expect. The Buddha, Geoff and Me - for anyone who's ever begun to wonder what the whole damn thing is all about ...

**Using Your Brain--for a Change** Richard Bandler 1985 Bandler covers a lot of ground in this book - in his unique style - and provides real insight into areas such as sub-modalities and multiple perspectives in a fairly short period (157 pages). The content is edited notes from a series of Bandler workshops (in a similar vein to Frogs into Princes and Trance-Formations). The book begins with an overview of NLP - making particular reference to the "new" submodality patterns (the book was written in 1985) and presenting these as a faster and more powerful way of creating personal change. Subsequent chapters provide a humorous exploration of many of the traditional approaches to personal change and outline many useful guiding principles (structure versus content etc) for the application of NLP to personal change. The author makes repeated reference to a number of epistemological issues underlying traditional psychological approaches that tend to focus on "what's wrong, when you broke, ... what broke you, ... and why you broke." He goes on to state that "psychologists have never been interested in how you broke, or how you continue to maintain the state of being broken." NLP on the other hand, Bandler asserts, assumes people work perfectly and that people are just doing something different from what we (or they) want to have happen. This provides a clear indication of the approach adopted in the remainder of the book, and suggests that the focus of NLP on subjective experience (as the study of subjective experience) is entirely valid and necessary. Bandler provides a convincing argument for tailoring all our change work to the individual - purely because each individual is unique. The book continues with a useful and insightful exploration of a number of techniques (including the fast phobia cure, contrastive analysis in belief change, integrated anchors and Swish,) as well as discussion of more general (and generative)

strategies for learning and motivation.

**Film/Genre** Rick Altman 2019-07-25 Film/Genre revises our notions of film genre and connects the roles played by industry critics and audiences in making and re-making genre. Altman reveals the conflicting stakes for which the genre game has been played and recognises that the term 'genre' has different meanings for different groups, basing his new genre theory on the uneasy competitive yet complimentary relationship among genre users and discussing a huge range of films from *The Great Train Robbery* to *Star Wars* and from *The Jazz Singer* to *The Player*.

*Language* Daniel L. Everett 2012-03-13 A bold and provocative study that presents language not as an innate component of the brain—as most linguists do—but as an essential tool unique to each culture worldwide. For years, the prevailing opinion among academics has been that language is embedded in our genes, existing as an innate and instinctual part of us. But linguist Daniel Everett argues that, like other tools, language was invented by humans and can be reinvented or lost. He shows how the evolution of different language forms—that is, different grammar—reflects how language is influenced by human societies and experiences, and how it expresses their great variety. For example, the Amazonian Pirahã put words together in ways that violate our long-held understanding of how language works, and Pirahã grammar expresses complex ideas very differently than English grammar does. Drawing on the Wari' language of Brazil, Everett explains that speakers of all languages, in constructing their stories, omit things that all members of the culture understand. In addition, Everett discusses how some cultures can get by without words for numbers or counting, without verbs for “to say” or “to give,” illustrating how the very nature of what’s important in a language is culturally determined. Combining anthropology, primatology, computer science, philosophy, linguistics, psychology, and his own pioneering—and adventurous—research with the

Amazonian Pirahã, and using insights from many different languages and cultures, Everett gives us an unprecedented elucidation of this society-defined nature of language. In doing so, he also gives us a new understanding of how we think and who we are.

**Law, Text, Terror** Peter Goodrich 2013-10-18 The essays collected here under the governing signs, Law, Text, Terror have their origins in a singular and topical desire. Their motive is most immediately that of acknowledging the massive and eccentric contribution of the philologist, psychoanalyst and Romanist jurist Pierre Legendre to the study of legal institutions and juridical practices. He has unceasingly asked the question 'why law?' and in endeavouring to answer that question, in the course of over twenty-five books published during the last forty years, he has traversed a unique and uniquely idiosyncratic body of disciplines and knowledges relevant to the symbolic forms and institutional functions of the Western legal order. These essays reflect that singularity of drive as well as that diversity of scholarly interests by taking up, playing with, varying and developing the themes of text and terror, law and territory, that Legendre either introduced or made peculiarly his own.

**The Development of the Social Self** Mark Bennett 2004-07-31 Drawing upon the perspective of social identity theory, The Development of the Social Self is concerned with the acquisition and development of children's social identities. In contrast to previous work on self-development, which has focused primarily on the development of the personal self, this volume makes a case for the importance of the study of the social self - that is, the self as defined through group memberships, such as gender, ethnicity, and nationality. A broad range of identity-related issues are addressed, such as ingroup identification, conceptions of social identities, prejudice, and the central role of social context. Based on contributions from leading researchers in Europe, Australia and the US, the

book summarises the major research programmes conducted to date. Furthermore, the closing chapters provide commentary on this research, as well as mapping out key directions for future research. With a unique focus encompassing both social and developmental psychology, *The Development of the Social Self* will appeal to a broad spectrum of students and researchers in both disciplines, as well as those working in related areas such as sociology and child development.

*Urban Connections in the Contemporary Pedestrian Landscape* Philip Peggill 2019-09-17 *Urban Connections in the Contemporary Pedestrian Landscape* explores the significant physical and cultural changes in our urban areas following the implementation of design strategies and increased pedestrian activity. Beginning with a history of the urban grid, the book then discusses experiential factors of pedestrianized urban landscapes in three scales, arterials, collectors and locals, with an emphasis on inductive and deductive design alternatives. It closely examines elements derived from current urban pedestrian experiences including form, scale, surfaces and identity and provides alternative design solutions for the future. Uniquely focusing on a hierarchical discussion of the quality of contemporary landscape design applications within the urban grid, and with illustrated examples throughout the text, this will be useful recommended reading for academics, researchers and postgraduate students on urban landscape and design courses.

**A Mathematician Plays The Stock Market** John Allen Paulos 2007-10-11 Can a renowned mathematician successfully outwit the stock market? Not when his biggest investment is WorldCom. In *A Mathematician Plays the Stock Market*, best-selling author John Allen Paulos employs his trademark stories, vignettes, paradoxes, and puzzles to address every thinking reader's curiosity about the market -- Is it efficient? Is it random? Is there anything to technical analysis, fundamental analysis, and other supposedly time-tested methods of picking stocks? How can one quantify risk?

What are the most common scams? Are there any approaches to investing that truly outperform the major indexes? But Paulos's tour through the irrational exuberance of market mathematics doesn't end there. An unrequited (and financially disastrous) love affair with WorldCom leads Paulos to question some cherished ideas of personal finance. He explains why "data mining" is a self-fulfilling belief, why "momentum investing" is nothing more than herd behavior with a lot of mathematical jargon added, why the ever-popular Elliot Wave Theory cannot be correct, and why you should take Warren Buffet's "fundamental analysis" with a grain of salt. Like Burton Malkiel's *A Random Walk Down Wall Street*, this clever and illuminating book is for anyone, investor or not, who follows the markets -- or knows someone who does.

Creating East and West Nancy Bisaha 2010-12-01 As the Ottoman Empire advanced westward from the fourteenth to the sixteenth centuries, humanists responded on a grand scale, leaving behind a large body of fascinating yet understudied works. These compositions included Crusade orations and histories; ethnographic, historical, and religious studies of the Turks; epic poetry; and even tracts on converting the Turks to Christianity. Most scholars have seen this vast literature as atypical of Renaissance humanism. Nancy Bisaha now offers an in-depth look at the body of Renaissance humanist works that focus not on classical or contemporary Italian subjects but on the Ottoman Empire, Islam, and the Crusades. Throughout, Bisaha probes these texts to reveal the significant role Renaissance writers played in shaping Western views of self and other. Medieval concepts of Islam were generally informed and constrained by religious attitudes and rhetoric in which Muslims were depicted as enemies of the faith. While humanist thinkers of the Renaissance did not move

entirely beyond this stance, *Creating East and West* argues that their understanding was considerably more complex, in that it addressed secular and cultural issues, marking a watershed between the medieval and modern. Taking a close look at a number of texts, Bisaha expands current notions of Renaissance humanism and of the history of cross-cultural perceptions. Engaging both traditional methods of intellectual history and more recent methods of cross-cultural studies, she demonstrates that modern attitudes of Western societies toward other cultures emerged not during the later period of expansion and domination but rather as a defensive intellectual reaction to a sophisticated and threatening power to the East.

*The Strategic Dialogue* Giorgio Nardone 2018-03-29 *The Strategic Dialogue* is a fine strategy by

which one can achieve maximum results with minimum effort. It was developed through a natural evolutionary process from previous treatments for particular pathologies, and composed of therapeutic stratagems and specific sequences of ad hoc manoeuvres constructed for different types of problems. This book represents both the starting and finishing line of all of the research, clinical practice, and managerial consulting performed by the authors over a fifteen year period at the Centro Terapia Strategica of Arezzo (Strategic Therapy Center). This work can be referred to as the finishing line because the Strategic Dialogue, an advanced therapeutic method of conducting a therapy session and inducing radical changes rapidly in the patient, represents the culmination of all that has been achieved so far in the field.
