Mission of the University Jose Ortega y Gasset 2014-09-25 In 1930, the great Spanish philosopher Jos Ortega y Gasset set forth a program for reforming the modern Spanish university. Aware that the missions of the university are many and often competing, Ortega built his program around a conception of a "general culture" that knows no national boundaries or time limits and could fit into any national system of higher education. His ideas are especially pertinent to contemporary debate in America over curriculum development and the purpose of education. In this volume Ortega sought to answer two essential questions: what is the knowledge most worth knowing by all students and what is the function of the university in a modern democracy? Basing his answers on his own deep personal culture and an extensive knowledge of the various European university systems, Ortega defined four primary missions: the teaching of the learned professions, the fostering of scientific research, training for political leadership, and finally the creation of cultured persons with the ability to make intellectual interpretations of the world. Ortega's understanding of "general culture" is set out in great detail here. He meant an active engagement in ideas and issues that were both historical and contemporary. His concern is with the classical problems of justice, the good society, who should rule, and the responsibilities of citizenship. This edition first published in 1998. Routledge is an imprint of Taylor & Francis, an informa company.

Sustainable Development Report 2021 Jeffrey Sachs 2021-10-14 The Sustainable Development Report 2021 features the SDG Index and Dashboards, the first and widely used tool to assess country performance on the UN Agenda 2030 and the Sustainable Development Goals. The report analyses and outlines what needs to happen for the Decade of Action and Delivery of the SDGs. In order to build back better following the Covid-19 pandemic, especially low-income countries will need increased fiscal space. The report frames the implementation of the SDGs in terms of six broad transformations. The authors examine country performance on the SDGs for 193 countries using a wide array of indicators, and calculate future trajectories, presenting a number of best practices to achieve the historic Agenda 2030. The views expressed in this report do not reflect the views of any organizations, agency or programme of the United Nations. This title is available as Open Access on Cambridge Core.

Moral Calculations Laszlo Mero 2012-12-06 What does game theory tell us about rational behavior? Is there such a thing as rational behavior, and if so, is it of any use to us? In this fascinating book, renowned Hungarian economist Laszlo Mero shows how game theory provides insight into such aspects of human psychology as altruism, competition, and politics, as well as its relevance to disparate fields such as physics and evolutionary biology. This ideal guide shows us how mathematics can illuminate the human condition.

After the Death of Childhood David Buckingham 2013-06-06 What will be the fate of childhood in the twenty-first century? Will children increasingly be living 'media childhoods', dominated by the electronic screen? Will their growing access to adult media help to abolish the distinctions between childhood and adulthood? Or will the advent of new media technologies widen the gaps between the generations still further? In this book, David Buckingham provides a lucid and accessible overview of recent changes both in childhood and in the media environment. He refutes simplistic moral panics about the negative influence of the media, and the exaggerated optimism about the 'electronic generation'. In the process, he points to the challenges that are posed by the proliferation of new technologies, the privatization of the media and of public space, and the polarization between media-rich and media-poor. He argues that children can no longer be excluded or protected from the adult world of violence, commercialism and politics; and that new strategies and policies are needed in order to protect their rights as citizens and as consumers. Based on extensive research, *After the Death of Childhood* takes a fresh look at well-established concerns about the effects of the media on children. It offers a challenging and refreshing approach to the perennial concerns of researchers, parents, educators, media producers and policy-makers.

From Matter to Life Sara Imari Walker 2017-02-23 This book tackles the most difficult and profound open questions about life and its origins from an information-based perspective.

Architecture and Embodiment Harry Francis Mallgrave 2013-06-26 In recent years we have seen a number of dramatic discoveries within the biological and related sciences. Traditional arguments such as "nature versus nurture" are rapidly disappearing because of the realization that just as we are affecting our environments, so too do these altered environments restructure our cognitive abilities and outlooks. If the biological and technological breakthroughs are promising benefits such as extended life expectancies, these same discoveries also have the potential to improve in significant ways the quality of our built environments. This poses a compelling challenge to conventional architectural theory... This is the first book to consider these new scientific and humanistic models in architectural terms. Constructed as a series of five essays around the themes of beauty, culture, emotion, the experience of architecture, and artistic play, this book draws upon a broad range of discussions taking place in philosophy, psychology, biology, neuroscience, and anthropology, and in doing so questions what implications these discussions hold for architectural design. Drawing upon a wealth of research, Mallgrave argues that we should turn our focus away from the objectification of architecture (treating design as the creation of objects) and redirect it back to those for whom we design: the people inhabiting our built environments.

Novacene James Lovelock 2020-11-10 A fascinating new study from the originator of the Gaia Theory, "who conceived the first wholly new way of looking at life on earth since Charles Darwin" (Independent) One of the world's leading scientific thinkers offers a vision of a future epoch in which humans and artificial intelligence unite to save the Earth James Lovelock, creator of the Gaia hypothesis and the greatest environmental thinker of our time, has produced an astounding new theory about future of life on Earth. He argues that the Anthropocene—the age in which humans acquired planetary-scale technologies—is, after 300 years, coming to an end. A new age—the Novacene—has already begun. In the Novacene, new beings will emerge from existing artificial intelligence systems. They will think 10,000 times faster than we do and they will regard us as we now regard plants. But this will not be the cruel, violent machine takeover of the planet imagined by science fiction. These hyperintelligent beings will be as dependent on the health of the planet as we are. They will need the planetary cooling system of Gaia to defend them from the increasing heat of the sun as much as we do. And Gaia depends on organic life. We will be partners in this project. It is crucial, Lovelock argues, that the intelligence of Earth survives and prospers. He does not think there are intelligent aliens, so we are the only beings capable of understanding the cosmos. Perhaps, he speculates, the Novacene could even be the beginning of a process that will finally lead to intelligence suffusing the entire cosmos. At the age of 100, James Lovelock has produced the most important and compelling work of his life.

Arts Therapists, Refugees and Migrants Ditty Dokter 1998-07-01 The legal and humanitarian response to the world's growing population of refugees and migrants has created more awareness of not only the physical but also the psychological needs of displaced peoples. Refugees are often the forgotten victims of war violence and political upheaval, subjected to the traumatic loss of family and home and the consequent deterioration of cultural identity as they seek asylum in other countries. Ditty Dokter is joined by contributors from a number of multicultural backgrounds, in a volume examining the issues surrounding intercultural arts therapies as a means of working with clients who are refugees and migrants. The role of art, music, dance, and drama in healing the effects of trauma and restoring the sense of cultural and personal identity is discussed, emphasising the need for sensitivity to cultural differences in practice. The ultimate aim is to promote more awareness of intercultural issues in an attempt to build a broader framework for arts therapy practice.

The Forgotten Revolution Lucio Russo 2013-12-01 The period from the late fourth to the late second century B. C. witnessed, in Greek-speaking countries, an explosion of objective knowledge about the external world. While Greek culture had reached great heights in art, literature and philosophy already in the earlier classical era, it is in the so-called Hellenistic period that we see for the first time — anywhere in the world — the

appearance of science as we understand it now: not an accumulation of facts or philosophically based speculations, but an organized effort to model nature and apply such models, or scientific theories in a sense we will make precise, to the solution of practical problems and to a growing understanding of nature. We owe this new approach to scientists such as Archimedes, Euclid, Eratosthenes and many others less familiar today but no less remarkable. Yet, not long after this golden period, much of this extraordinary development had been reversed. Rome borrowed what it was capable of from the Greeks and kept it for a little while yet, but created very little science of its own. Europe was soon smothered in the obscurantism and stasis that blocked most avenues of intellectual development for a thousand years — until, as is well known, the rediscovery of ancient culture in its fullness paved the way to the modern age.

Aristotelian Explorations G. E. R. Lloyd 1996 This book challenges several widespread views concerning Aristotle's methods and practices of scientific and philosophical research. Taking central topics in psychology, zoology, astronomy and politics, Professor Lloyd explores generally unrecognized tensions between Aristotle's deeply held a priori convictions and his remarkable empirical honesty in the face of complexities in the data or perceived difficult or exceptional cases. The picture that emerges of Aristotle's actual engagement in scientific research and of his own reflections on that research is substantially more complex than is usually allowed.

Doctors and Healers Tobie Nathan 2018-08-08 We think we know what healers do: they build on patients' irrational beliefs and treat them in a 'symbolic' way. If they get results, it's thanks to their capacity to listen, rather than any influence on a clinical level. At the same time, we also think we know what modern medicine is: a highly technical and rational process, but one that scarcely listens to patients at all. In this book, ethnopsychiatrist Tobie Nathan and philosopher Isabelle Stengers argue that this commonly posed opposition between traditional and modern medicine is misleading. They show instead that healers are interesting precisely because they don't listen to patients, using techniques of 'divination' rather than 'diagnosis'. Healers construct genuine therapeutic strategies by identifying the origins of symptoms in external forces, outside of the mind of the sufferer. Modern medicine, for its part, is characterized by empiricism rather than rationality. What appears to be the pursuit of rationality is ultimately only a means to dismiss and exclude other forms of treatment. Blurring the distinctions between traditional and modern practices and drawing on perspectives from across the globe, this ethnopsychiatric manifesto encourages us to think in radically new ways about illness, challenging accepted notions on the relationship between sufferer and symptom.

The Big Questions The Universe Stuart Clark 2011-10-27 The Big Questions series enables renowned experts to tackle the 20 most fundamental and frequently asked questions of a major branch of science or philosophy. Each 3000-word essay simply and concisely examines a question that has eternally perplexed enquiring minds, providing answers from history's great thinkers. This ambitious project is a unique distillation of humanity's best ideas. In Big Questions: The Universe, Dr Stuart Clark tackles the 20 key questions of astronomy and cosmology: What is the universe? How big is the universe? How old is the universe? What are stars made from? How did the Universe form? Why do the planets stay in orbit? Was Einstein right? What are black holes? How did the Earth form? What were the first celestial objects? What is dark matter? What is dark energy? Are we really made from stardust? Is there life on Mars? Are there other intelligent beings? Can we travel through time and space? Can the laws of physics change? Are there alternative universes? What will be the fate of the universe? Is there cosmological evidence for God?

Personality: Determinants, Dynamics, and Potentials Gian Vittorio Caprara 2000-08-15 This book, first published in 2000, is a comprehensive survey of research and theory in personality psychology.

Neuronal Man Jean-Pierre Changeux 1997-04-22 Over the past thirty-five years, there has been an explosive increase in scientists' ability to explain the structure and functioning of the human brain. While psychology has advanced our understanding of human behavior, various other sciences, such as anatomy, physiology, and biology, have determined the critical importance of synapses and, through the use of advanced technology, made it possible actually to see brain cells at work within the skull's walls. Here Jean-Pierre Changeux elucidates our current knowledge of the human brain, taking an interdisciplinary approach and explaining in layman's terms the complex theories and scientific breakthroughs that have significantly improved our understanding in the twentieth century.

Asylums Erving Goffman 2017-09-08 A total institution is defined by Goffman as a place of residence and work where a large number of like-situated, individuals, cut off from the wider society for an appreciable period of time, together lead an enclosed, formally administered round of life. Prisons serve as a clear example, providing we appreciate that what is prison-like about prisons is found in institutions whose members have broken no laws. This volume deals with total institutions in general and, mental hospitals, in particular. The main focus is, on the world of the inmate, not the world of the staff. A chief concern is to develop a sociological version of the structure of the self. Each of the essays in this book were intended to focus on the same issue—the inmate's situation in an institutional context. Each chapter approaches the central issue from a different vantage point, each introduction drawing upon a different source in sociology and having little direct relation to the other chapters. This method of presenting material may be irksome, but it allows the reader to pursue the main theme of each paper analytically and comparatively past the point that would be allowable in chapters of an integrated book. If sociological concepts are to be treated with affection, each must be traced back to where it best applies, followed from there wherever it seems to lead, and pressed to disclose the rest of its family.

The Self and Autism Michael Fordham 2017-02-22 The Library of Analytical Psychology, Volume 3: The Self and Autism discusses the relationship between the concept of self and autism. The book primarily revolves around the work of Carl Jung. The first part of the book covers the theoretical aspects of analytical psychology; this part covers the concept of archetypes, self, and symbols. The importance of child experiences is also dealt with in the first chapter. The next part discusses the clinical techniques in treating children with autism. The last part presents case studies of infantile autism. The text will be of great use to psychologists, therapists, and councilors who are dealing with clients who have autism. The book will also be of great interest to readers who are concerned with autism.

Great Maps Jerry Brotton 2014-09-01 The whole world is mapped out for your viewing pleasure in this captivating compendium, ranging from past to present through diverse themes of transport and technology to discoveries and development. Covering the classical maps of the ancient world and traveling through time to reach Google Earth in the 21st century, this unprecedented history of more than 60 maps opens up our planet as never before. Great Maps showcases early Medieval maps like including mappae mundi; iconic transport maps such as the London Underground; important travel maps including Dr. Livingstone's version of Africa; maps of natural wonders such as the ocean floor; and momentous moments including the marks on the Moon left by the lunar landings. There are maps that show the way to heaven, depict lands with no sunshine, and the mysterious home of "the people with no bowels" on this mind-blowing journey. Much more than just geographical data, maps are an accurate reflection of the culture and context of different time frames in history. British historian Jerry Brotton tells the amazing secret stories behind many of the most significant maps ever unearthed, revealing key features and innovative techniques in incredible detail. The unique insight into how mapmakers have expressed their world views results in this treasured book that makes a welcome addition to any bookshelf or home library.

The Consumer Society Jean Baudrillard 2016-12-13 Jean Baudrillard's classic text was one of the first to focus on the process and meaning of consumption in contemporary culture. Originally published in 1970, the book makes a vital contribution to current debates on consumption. The book includes Baudrillard's most organized discussion of mass media culture, the meaning of leisure, and anomie in affluent society. A chapter on the body demonstrates Baudrillard's extraordinary prescience for flagging vital subjects in contemporary culture long before others. This English translation begins with a new introductory essay.

Le religioni e le sfide del futuro. Per un'etica condivisa fondata sul dialogo Vannino Chiti 2019-10-24 La religiosità nel mondo nel suo complesso è in aumento. Non in Occidente, dove la fede si personalizza e spesso è vissuta anche come non appartenenza a una Chiesa, ma a una identità, a una tradizione da proteggere contro le «invasioni». La ricerca di ciò che unisce, del dialogo fra credenti di varie religioni e non credenti, del confronto sui valori comuni può portare alla condivisione di un'etica universale per costruire insieme una via di salvezza spirituale e materiale del pianeta. Questo libro dà voce a chi crede che questa via sia percorribile, senza chiudersi dentro dogmi o pregiudizi secolari, sia esso cristiano, musulmano, ebreo, di altre fedi o di culture non religiose. La reciproca conoscenza può solo aiutare tutti- credenti e non credenti, laici e uomini di religione - a stabilire una convivenza democratica arricchita dall'apporto di comprensione, volontà di pace, apertura al futuro. Queste pagine, esplorazione corale del sacro nel mondo, vogliono essere un passo in questa direzione.

Handbook of Perinatal Clinical Psychology Rosa Maria Quatraro 2020-03-26 The book examines the major issues in perinatal clinical psychology with the presence of theoretical information and operational indications, through a biopsychosocial approach. The multiplicity of scientific information reported makes this book both a comprehensive overview on the major perinatal mental health disorders and illnesses, and a clinical guide. It covers perinatal clinical psychology through a journey of 15 chapters, putting the arguments on a solid theoretical basis and reporting multiple operational indications of great utility for daily clinical practice. It has well documented new evidence bases in the field of clinical psychology that have underpinned the conspicuous current global and national developments in perinatal mental health. As such, it is an excellent resource for researchers, policy makers, and practitioners - in fact, anyone and everyone who wishes to understand and rediscover, in a single opera, the current scientific and application scenario related to psychological health during pregnancy and after childbirth.

How to Be a Marxist in Philosophy Louis Althusser 2017-11-16 In *How to Be a Marxist in Philosophy* one of the most famous Marxist philosophers of the 20th century shares his concept of what it means to function fruitfully as a political thinker within the discipline and environs of philosophy. This is the first English translation to Althusser's provocative and, often, controversial guide to being a true Marxist philosopher. Althusser argues that philosophy needs Marxism. It can't exist fully without it. Similarly, Marxism requires the rigour and structures of philosophy to give it form and focus. He calls all thinking people to, 'Remember: a philosopher is a man who fights in theory, and when he understands the reasons for this fight, he joined the ranks of the struggle of workers and popular classes.' In short, this book comprises Althusser's elucidation of what praxis means and why it continues to matter. With a superb introduction from translator and Althusser archivist G.M. Goshgarian, this is a book that will re-inspire contemporary Marxist thought and reinvigorate our notions of what political activism can be.

The Dynamics of Architectural Form Rudolf Arnheim 2009-10-19 Rudolf Arnheim has been known, since the publication of his groundbreaking *Art and Visual Perception* in 1974, as an authority on the psychological interpretation of the visual arts. Two anniversary volumes celebrate the landmark anniversaries of his works in 2009. In *The Power of the Center*, Arnheim uses a wealth of examples to consider the actors that determine the overall organization of visual form in works of painting, sculpture, and architecture. *The Dynamics of Architectural Form* explores the unexpected perceptual consequences of architecture with Arnheim's customary clarity and precision.

Second Nature Gerald M. Edelman 2006-10-01 Burgeoning advances in brain science are opening up new perspectives on how we acquire knowledge. Indeed, it is now possible to explore consciousness - the very centre of human concern - by scientific means. In this illuminating book, Dr. Gerald M. Edelman offers a new theory of knowledge based on striking scientific findings about how the brain works. And he addresses the related compelling question: does the latest research imply that all knowledge can be reduced to scientific description? Edelman's brain-based approach to knowledge has rich implications for our understanding of creativity, of the normal and abnormal functioning of the brain, and of the connections among the different ways we have of knowing. While the gulf between science and the humanities and their respective views of the world has seemed enormous in the past, the author shows that their differences can be dissolved by considering their origins in brain functions. He foresees a day when brain-based devices will be conscious, and he reflects on this and other fascinating ideas about how we come to know the world and ourselves.

Transhumanism - Engineering the Human Condition Roberto Manzocco 2019-03-11 This book is designed to offer a comprehensive high-level introduction to transhumanism, an international political and cultural movement that aims to produce a "paradigm shift" in our ethical and political understanding of human evolution. Transhumanist thinkers want the human species to take the course of evolution into its own hands, using advanced technologies currently under development - such as robotics, artificial intelligence, biotechnology, cognitive neurosciences, and nanotechnology - to overcome our present physical and mental limitations, improve our intelligence beyond the current maximum achievable level, acquire skills that are currently the preserve of other species, abolish involuntary aging and death, and ultimately achieve a post-human level of existence. The book covers transhumanism from a historical, philosophical, and scientific viewpoint, tracing its cultural roots, discussing the main philosophical, epistemological, and ethical issues, and reviewing the state of the art in scientific research on the topics of most interest to transhumanists. The writing style is clear and accessible for the general reader, but the book will also appeal to graduate and undergraduate students.

Literature and Artifacts George Thomas Tanselle 1998 The fifteen essays collected here form a series of variations on a theme, exploring the interconnections between verbal works and the physical objects--primarily manuscripts and printed books--that transmit them. Verbal works may be intangible, but they generally come to us tied to objects; and the study of such works therefore cannot be separated from the study of artifacts. The aim of this book is to examine the theory that underlies this observation and the practical implications that follow from it.

Tecnologie e sviluppo del benessere psicobiologico Carlo Mazzucchelli 2018-11-27 *Tecnologia - saggio (209 pagine) - Un prontuario di sopravvivenza attiva, pensato per genitori, psicologi e psicoterapeuti. Alcune semplici regole per ridurre la fatica della genitorialità e contribuire al benessere psicobiologico dei bambini. La tecnologia ha cambiato comportamenti e abitudini, modi di pensare, di relazionarsi agli altri e a sé stessi, il modo con cui classifichiamo la realtà di cui facciamo esperienza. L'identità del proprio Sé non è un regalo del nostro codice genetico, neppure una destinazione finale. È un viaggio continuo, fatto di impegno e duro lavoro individuale. È un processo che inizia dall'infanzia e dura nel tempo, impegnando funzioni cognitive, emotive, relazionali e processi biologici profondi. Dall'esito di questo viaggio discenderà la capacità del cucciolo umano di soddisfare nella vita, in modo indipendente, i suoi bisogni di fondo, ovvero salute e benessere. Il processo vede coinvolti genitori e figli, giovani e adulti, maschi e femmine. Inizia con il differenziare se stessi dagli altri e con il rispecchiarsi dentro uno specchio. Oggi lo specchio è diventato un display. Il viaggio che porta alla costruzione del Sé avviene in costante compagnia di tecnologie che disegnano nuove mappe mentali e relazionali. Creano al tempo stesso nuovi bisogni, sollecitando interrogativi pressanti e suggerendo nuove riflessioni. Chiamati a una riflessione critica e consapevole sono soprattutto i genitori di bambini e bambine che stanno crescendo e sviluppando il loro Sé in stretta simbiosi con i dispositivi che i genitori hanno loro regalato. Sempre connessi, i bambini digitali sono in realtà alla costante ricerca di rapporti solidi e duraturi. Per comprendere cosa i bambini vogliono veramente, i genitori devono essere in grado di identificare rischi e opportunità, adottando buone pratiche utili per prevenire o eliminare i primi e favorire le seconde. Questo e-book è rivolto principalmente ai genitori. Propone alcune regole, un prontuario di sopravvivenza attiva, da adottare per contribuire allo sviluppo psicobiologico sano ed equilibrato dei loro figli e per ridurre la fatica della genitorialità. Carlo Mazzucchelli, dirigente d'azienda, filosofo e tecnologo, è il fondatore di SoloTablet, un progetto dedicato a una riflessione critica sulla tecnologia. Esperto di marketing, comunicazione e management, ha operato in ruoli manageriali e dirigenziali in aziende italiane e multinazionali. What Makes Your Brain Happy and Why You Should Do the Opposite David Disalvo 2011-11-15 This book reveals a remarkable paradox: what your brain wants is frequently not what your brain needs. In fact, much of what makes our brains "happy" leads to errors, biases, and distortions, which make getting out of our own way extremely difficult. Author David DiSalvo presents evidence from evolutionary and social psychology, cognitive science, neurology, and even marketing and economics. And he interviews many of the top thinkers in psychology and neuroscience today. From this research-based platform, DiSalvo draws out insights that we can use to identify our brains' foibles and turn our awareness into edifying action. Ultimately, he argues, the research does not serve up ready-made answers, but provides us with actionable clues for overcoming the plight of our advanced brains and, consequently, living more fulfilled lives.

Una nuova geografia del cervello Bernard Sablonnière 2018 I misteri del cervello non finiscono mai. Bernard Sablonnière ci guida nell'esplorazione di questi territori ancora in gran parte sconosciuti, ne traccia la mappa ed elenca funzioni e capacità sorprendenti dell'organo che ci rende "umani": percezione, memoria, emozioni, passioni, creatività. Il cervello è la chiave dei nostri talenti e la fonte del nostro straordinario potenziale di adattamento e apprendimento. Nulla è determinato una volta per tutte: il cervello si rigenera, si modifica, rimedia alle proprie mancanze, ci permette di imparare e di inventare. L'autore traccia una vera e propria cartografia dei nostri paesaggi cerebrali e mostra come preservare e rafforzare le risorse del cervello per vivere meglio, più a lungo e più felici.

Fundamental Trends in City Development Giovanni Maciocco 2007-12-03 The Reinvented City reflects on externity, the principal feature of a reinvented city. Three basic trends of the city are investigated; "discomposed", "generic" and "segregated" phenomena with the loss of the city as a space of social interaction and communication. Important questions are posed: What is the true public sphere in contemporary societies? What is the contemporary public space corresponding to it? In what way can the city project construct contemporary public space?

Emotion Dylan Evans 2019-09-26 Was love invented by European poets in the Middle Ages or is it part of human nature? Will winning the lottery really make you happy? Is it possible to build robots that have feelings? In this Very Short Introduction Dylan Evans explores these and many other intriguing questions in this guide to the latest thinking about the emotions. Drawing on a wide range of scientific research, from anthropology and psychology to neuroscience and artificial intelligence, Evans takes the reader on a fascinating journey into the human heart, discussing the evolution of emotions and their biological basis, the science of happiness, and the role that emotions play in memory and decision making. Greeted by critics as a pop science classic when it was first published in 2001, the book has now been thoroughly revised and updated to incorporate new developments in our understanding of emotions, including new sections addressing the neural basis of empathy and the emotional impact of films. ABOUT THE SERIES: The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area. These pocket-sized books are the perfect way to get ahead in a new subject quickly. Our expert authors combine facts, analysis, perspective, new ideas, and enthusiasm to make interesting and challenging topics highly readable.

In Praise of Forgiveness Massimo Recalcati 2020-05-19 Relationships fall apart, marriages fail, couples break up - it happens to us all. Time corrodes passion and the routines of daily life kill the excitement that surrounds the emotion of the first encounter. The difficulty of uniting sexual pleasure with love, which Freud considered to be the most common neurosis in any love life, has become emblematic of a truth that seems undeniable: desire is destined to die if its object is not constantly renewed, if we do not change partner, if it is closed for too long in the restrictive chamber of the same bond. And yet what happens to these bonds when one of the two partners betrays the other, when the promise fails, when there is another emotional experience cloaked in secrecy and deceit? What happens if the traitor then begs forgiveness? Are they asking to be loved again and, having declared that it is not like it used to be, now want everything to go back to how it was? Should we make fun of lovers in their attempts to make love last? Or should we try to face up to the experience of betrayal, with the offence caused by the person we love most? Should we not perhaps attempt to praise forgiveness in love?

Reading Acquisition Philip B. Gough 2017-11-27 Originally published in 1992. This book brings together the work of a number of distinguished international researchers engaged in basic research on beginning reading. Individual chapters address various processes and problems in learning to read - including how acquisition gets underway, the contribution of story listening experiences, what is involved in learning to read words, and how readers represent information about written words in memory. In addition, the chapter contributors consider how phonological, onset-rime, and syntactic awareness contribute to reading acquisition, how learning to spell is involved, how reading ability can be explained as a combination of decoding skill plus listening comprehension skill, and what causes reading difficulties and how to study these causes.
