**Participatory Rural Appraisal** N Narayanasamy 2009-01-06 Participatory Rural Appraisal (PRA) methods, now known as Participatory Learning and Action (PLA), have been extensively used in development research, action and evaluation. This book is based on the author's decade-long intensive field experience—each method is explained by drawing on field-based illustrations. The book vividly describes the methods of PRA, highlighting the essential features as well as the application, merits and limitations of each method. *Participatory Rural Appraisal: Principles, Methods and Application* outlines the application of PRA methodology in areas like participatory poverty assessment, sustainable livelihood analysis, assessment of hunger, vulnerability analysis, organizational analysis, monitoring and evaluation. Separate sections on SWOT analysis and on the method of interview and dialogue are also included in the book. Besides, the author has provided guidelines for sector-wise application of PRA, which would serve as a ready reference for students and practitioners alike. A chapter on the roles of members of a PRA team is another key feature of this book, which would be immensely valuable for students, researchers and academicians working in the areas of social work, rural development, agriculture, and environmental science, and also for NGO workers and trainers and researchers in the development field.

**An Introduction to Regional Geography** Paul Claval 1998-08-06 The idea of the region has been a central concept in the understanding of the natural environment, of human society and culture, and of their interactions, from the ancient Greeks to the present. In this book Paul Claval provides a critical introduction to the ways in which the concept of the region has been, is, and could be used to make sense of spatial organization and areal variation in human activities. He examines both economic and policy issues, and relates these to culture, regional identity and ecology. The book is divided into three parts. Part I provides a concise account of regional studies from the ancient Greeks to the present. It then outlines the main current issues in regional geography. Part II describes the main perspectives on the division of space, the different kinds and typologies of regions, and contrasting modes of regional representation. Paul Claval also examines here how ecological, economic, social, cultural, and political phenomena can be understood through their areal variations. Part III looks at how states and non-state societies organize themselves regionally and of the evolution in contemporary dynamics of such modes of organization. The author shows how the perception, representation, imposition and claiming of regions changes from non-state societies, through traditional to industrial societies, and considers the merging of territorial borders of a globalized world economy. This is a complete and penetrating survey of the regional concept as a key to the geographical imagination. Written by France's most prominent geographer, it draws equally on Anglo-American intellectual traditions, and is illustrated by a wide range of examples drawn from all over the world.

*An Introduction to Mapwork and Practical Geography* John Bygott 1967

**Methods for Development Work and Research** Britha Mikkelsen 1995-09-13 "A detailed handbook of field work method aimed at development researchers and NGO workers. Macro-level

development issues as they relate to micro-level projects are discussed as a context before an examination is made of participation and the use of indicators and semi-structured interviews. Four illustrative chapters then examine current participatory rural appraisal methods before an assessment is made in the final chapters of the limitations, integration in development studies, and ethical implications of such methods." --Oxfam's Review of Journals "Development researchers will be grateful to Mikkelsen for her laudable job in competently addressing their needs.... She provides an overview of the traditional and the new techniques and tools for field study.... The illustrations she cites contain instructive practical suggestions." --Deccan Herald "A compendium of practical analytical tools for both the participatory approach and rapid assessment methods. It is clearly presented and well illustrated. The basic emphasis is to reverse the top-down approach of traditional methodologies, in favour of greater dialogue, flexibility and participation." --Social Action For anyone conducting research in a development setting, this book is a must. Providing practical examples, techniques, and tools for different types of studies, this landmark study examines in detail both the concept of participation and the ethical considerations of fieldwork, stressing methodological pluralism and dialogue in development planning. The major focus of this book is devoted to new rapid and participatory methods, viewing them as an important adjustment of--or complement to--other long-established qualitative and quantitative field study methods. The selection of methods is a reflection of changed perceptions of North-South and insider-outsider relations, and highlights different techniques for studying selected development issues. The author shows how to employ techniques such as ranking and scoring; mapping and diagrams; and the use of indicators, focus groups, and semistructured interviews when working on a development research project. Replete with richly illustrated case studies, quotations, and graphics, this book is the essential resource for development planners and researchers. It will also be of great interest to students and scholars in development studies, research methods, sociology, and anthropology.

**The Basics of Geomorphology** Kenneth J Gregory 2014-10-20 "I can think of no better guides than Professors Ken Gregory and John Lewin to lead the reader through the conceptual basis of this exciting science." - Victor R. Baker, University of Arizona "A very readable and informative introduction to the discipline for senior undergraduates, postgraduates and researchers." - Angela Gurnell, Queen Mary University of London "Time will tell, but this book may well mark a turning point in the way students and scientists alike perceive Earth surface processes and landforms." - Jonathan Phillips, University of Kentucky This student focused book provides a detailed description and analysis of the key concepts, ideas, and hypotheses that inform geomorphology. Kenneth Gregory and John Lewin explain the basics of landform science in 20 concepts, each the subject of a substantive, cross-referenced entry. They use the idea of the 'geomorphic system' to organise entries in four sections, with extensive web resources provided for each: System Contexts: The Systems Approach / Uniformitarianism / Landform / Form, Process and Materials / Equilibrium / Complexity and Non Linear Dynamical Systems System Functioning: Cycles and cascades / Force-Resistance / Geomorphic work / Process Form Models System Adjustments: Timescales / Forcings / Change Trajectories / Inheritance and Sensitivity / Anthropocene Drivers for the Future: Geomorphic Hazards / Geomorphic Engineering / Design and Prediction Aligned with the teaching literature, this innovative text provides a fully-functioning learning environment for study, revision, and even self-directed research for both undergraduate and postgraduate students of geomorphology.

**Geography of Climate Change** Richard John Aspinall 2013-09-13 Climate change is one of the inescapable themes of current times. Climate change confronts society in issues as diverse as domestic and international political debate and negotiation, discussion in the media and public opinion, land management choices and decisions, and concerns about environmental, social and economic priorities now and for the future. Climate change also spans spatial, temporal and organisational scales, and has strong links with nature-society relationships, environmental dynamics, and vulnerability. Understanding the full range of possible consequences of climate change is essential for informed decision making and debate. This book provides a collection of chapters that span environmental, social and economic aspects of climate change. Together the

chapters provide a diverse and contrasting series that highlights the need to analyze, review and debate climate change and its possible impacts and consequences from multiple perspectives. The book also is intended to promote discussion and debate of a more integrated, inclusive and open approach to climate change and demonstrates the value of geography in addressing climate change issues. This book was originally published as a special issue of *Annals of the Association of American Geographers*.

Water, Earth, and Man R J Chorley 2021-10-07 First published in 1969, *Water, Earth, and Man*, was written to demonstrate the advantages of adopting a unified view of the earth and social sciences. The book considers the connection between an understanding of physical environments and an understanding of social environments. It explores the hydrologic cycle and highlights the significance of the relationship between natural environments and the activities of humankind, drawing together physical and human geography to produce a highly detailed study.

*Quantitative Techniques in Geography* Robert Hammond 1978 This new and enlarged edition contains extra material on a number of topics, including geography and computers, transformation and combination of data, cluster sampling, the use of surrogates and linear programming. As in the first edition the authors attempt to give an insight into some of the techniques and underlying concepts of numerical analysis which form such an integral part of modern geography. Worked examples and exercises for the student are included throughout the text. The examples are taken from both physical and human geography.

*Maps and Diagrams* Francis John Monkhouse 1952

*Elements Of Practical Geography* R. L. Singh 1979

*Spatial Analysis in Geomorphology* Richard J. Chorley 2019-04-10 Originally published in 1972. This book covers from 'linear' statistical methods, regression and variance analysis to multivariate methods to wider spatial analytic techniques, in which a clear association is maintained between quantitative data and the spatial coordinates which locate them. The purpose of this volume is to highlight this coherent area of scholarship under the general headings of spatial point systems, networks, continuous distributions, partitioning and simulation. Seventeen authors from Britain and the United States have been brought together to produce a book whose attention is on the body of spatial techniques necessary to enable the building of dynamic spatial models of landforms which formed the keystone of much geomorphic work in future years.

**Society - Water - Technology** Reinhard F. Hüttel 2015-11-02 This book presents the results of the Interdisciplinary Research Group "Society - Water - Technology" of the Berlin-Brandenburg Academy of Sciences and Humanities. It describes interdisciplinary evaluation criteria for major water engineering projects (MWEPs) and portrays an application to the Lower Jordan Valley (Middle East) and the Fergana Valley (Central Asia). Both areas are characterised by transboundary conflicts, by challenges due to demographic and climate change and by political and societal pressures. Based on the findings, the book provides recommendations for science and political decisions makers as well as for international financing institutions. In addition, it outlines research gaps from an interdisciplinary perspective. In the past, MWEPs have been used as an instrument to cope with the demands of growing populations and to enhance development progress. Experiences with MWEPs have shown that a purely technical approach has not always brought about the desired

results. In many cases, MWEPs have even resulted in negative implications for society and environment. Therefore, improved management strategies and enhanced technologies for a sustainable water resource management system are a prerequisite to meet present and future challenges. And, moreover, the continuous evaluation and optimisation of these measures is, likewise, a must.

*Map Work And Practical Geography* Gopal Singh 2009-11-01 The book encompasses a wide range of topics on practical geography taught to the B.A./B.Sc. students of Indian universities. Numerous examples and diagrams have been included in the text with the sole aim of enabling the students to have a comprehensive grasp of the subject. Attempt has also been made to present a well-balanced treatment of each topic. Topics like measurement of ground areas from maps, determination of class-interval for choropleth maps, representation of agricultural, industrial and transport data, choice of map projections, interpretation of topo-sheets, etc., have been included in this book and discussed in detail. Books treating various aspects of practical geography need regular up-dates. Therefore, the latest available material has been used to update this edition. Guidance of learned college and university teachers has enabled the author to present the subject-matter clearly and accurately. It is hoped that in addition to developing a keen interest for practical geography, it will form the basis for a more advanced study of the subject among the students.

Geography and Technology Stanley D. Brunn 2004-03-31 This volume celebrates the 100th anniversary of the Association of American Geographers. It recognizes the importance of technologies in the production of geographical knowledge. The original chapters presented here examine technologies that have affected geography as a discipline. Among the technologies discussed are cartography, the camera, aerial photography, computers, and other computer-related tools. The contributors address the impact of such technologies on geography and society, disciplinary inquiries into the social/technological interfaces, high-tech as well low-tech societies, and applications of technologies to the public and private sectors. Geography and Technology can be used as a textbook in geography courses and seminars investigating specific technologies and the impacts of technologies on society and policy. It will also be useful for those in the humanities, social, policy and engineering sciences, planning and development fields where technology questions are becoming of increased importance. Geography clearly has much to learn from other disciplines and fields about geography/technology linkages; others can likewise learn much from us.

DIKSHIT 1994-01-01 With contribution from world renowned geographers, this edited book is on the spirit and purpose of geography, on the fundamentals concepts, philosophy and methodology of geography\_ as a discipline. It is designed to convey this essence of modern geography in a jargon-free and easy to read style.
