Mountain Risks: From Prediction to Management and Governance Theo Van Asch 2013-09-30

This book offers a cross disciplinary treatment of the rapidly growing field of integrated approaches in risk assessment in mountainous areas. All major aspects related to hazard and risk assessment, risk management, and governance are illustrated with a wide range of case studies. The first part of the book focuses on new techniques for assessing the natural hazards of different types of mass movements. State-of-the-art techniques for morphological characterization and monitoring of displacements are described. Computational advances are covered to explain the process systems and to quantify the hazards of fast and slow-moving landslides. In the second part of the book methodologies are included for assessing the impact of these natural hazards on the society in terms of risks. In this part, methodologies for defining the vulnerability of the elements at risk are shown and the use of run-out models for risk assessment of the dangerous rapid mass movements are evaluated. The third part of the book focuses on the response of society towards the problems of hazard and risk. It highlights the role of spatial planning, early warning systems and evacuation plans for risk management. It establishes practical thresholds for acceptable and tolerable risks and emphasizes the importance of education and communication to society. Audience The book is of interest to a wide range of experts from related disciplines, practitioners and stakeholders to demonstrate the importance of an integrated approach for all aspects of risks in mountainous areas.

Textile Production in Pre-Roman Italy Margarita Gleba 2008-11-05 Older than both ceramics and metallurgy, textile production is a technology which reveals much about prehistoric social and economic development. This book examines the archaeological evidence for textile production in Italy from the transition between the Bronze Age and Early Iron Ages until the Roman expansion (1000-400 BCE), and sheds light on both the process of technological development and the emergence of large urban centres with specialised crafts. Margarita Gleba begins with an overview of the prehistoric Apennine peninsula, which featured cultures such as the Villanovans and the Etruscans, and was connected through colonisation and trade with the other parts of the Mediterranean. She then focuses on the textiles themselves: their appearance in written and iconographic sources, the fibres and dyes employed, how they were produced and what they were used for: we learn, for instance, of the linen used in sails and rigging on Etruscan ships, and of the complex looms needed to produce twill. Featuring a comprehensive analysis of textiles remains and textile tools from the period, the book recovers information about funerary ritual, the sexual differentiation of labour (the spinners and weavers were usually women) and the important role the exchange of luxury textiles played in the emergence of an elite. Textile production played a part in ancient Italian society's change from an egalitarian to an aristocratic social structure, and in the emergence of complex urban communities.

Comparative Federalism Francesco Palermo 2017-10-05 This is the first comprehensive book that explores the subject of federalism from the perspective of comparative constitutional law, whilst simultaneously placing a strong emphasis on how federal systems work in practice. This focus is reflected in the book's two most innovative elements. First, it analyses from a comparative point of view how government levels exercise their powers and interact in several highly topical policy areas like social welfare, environmental protection or migrant integration. Second, the book incorporates case law boxes discussing seminal judgments from federal systems worldwide and thus demonstrates the practical impact of constitutional jurisprudence on policymakers and citizens alike. "This is simply the best analysis of contemporary federalism currently available. It is comprehensive

in its coverage, thorough in its analysis, and persuasive in its conclusions. Every student of federalism, from novice to expert, will find benefit from this volume." Professor G Alan Tarr, Rutgers University "Wading through the thicket of the multiple forms that the federal idea has taken in the contemporary world, this remarkably comprehensive treatise backed by case law fills a long-awaited gap in the literature on comparative federalism. It combines a mastery of the literature on federal theory with a critical understanding of how it plays out in practice. Outstanding in the breadth of its scope, this magisterial survey will serve as a work of reference for generations of scholars who seek to understand how federalism works in developed as well as developing countries." Professor Balveer Arora, Jawaharlal Nehru University New Delhi "This book is an extraordinarily handy work of reference on the diverse federal-type systems of the world. It handles both shared principles and differences of perspective, structure or practice with confidence and ease. It will become a standard work for scholars and practitioners working in the field." Professor Cheryl Saunders, The University of Melbourne "This is a remarkable book - for its sheer breadth of scope, combining detail of practice with analysis of federal principles, and for its fresh look at federalism. With great erudition, drawing on world scholarship and the practice of federalism across the globe, Palermo and Kössler magnificently traverse from the ancient roots of federalism to the contemporary debates on ethno-cultural dimensions and participatory democracy. The book sets a new benchmark for the study of comparative federalism, providing new insights that are bound to influence practice in an era where federal arrangements are expected to deliver answers to key governance and societal challenges."

Water and Asphalt Paola Viganò 2016 "Water and Asphalt, the latest volume in the UFO series, investigates the metropolitan area of Venice with regard to the increasing separation of residential and industrial neighborhoods. It is based on an extensive research project at Venice's Università IUAV on urban density and sprawl. The densely populated metropolitan region around the world-famous 'Serenissima', crisscrossed by networks of roads and waterways, provides the ideal test case for imagining the concept termed by this study as the Project of Isotropy. The researchers argue that conditions now exist for redevising the isotropic space in Venice with a focus on the water system, roads and public transportation, alternative mobility, forms of diffused welfare, innovative agriculture, and the decentralized production of energy.--Publisher's website.

Law and Agroecology Massimo Monteduro 2015-05-06 This book represents a first attempt to investigate the relations between Law and Agroecology. There is a need to adopt a transdisciplinary approach to multifunctional agriculture in order to integrate the agroecological paradigm in legal regulation. This does not require a super-law that hierarchically purports to incorporate and supplant the existing legal fields; rather, it calls for the creation of a trans-law that progressively works to coordinate interlegalities between different legal fields, respecting their autonomy but emphasizing their common historical roots in *rus* in the process. *Rus*, the rural phenomenon as a whole, reflects the plurality and interdependence of different complex systems based jointly on the land as a central point of reference. "Rural" is more than "agricultural": if agriculture is understood traditionally as an activity aimed at exploiting the land for the production of material goods for use, consumption and private exchange, rurality marks the reintegration of agriculture into a broader sphere, one that is not only economic, but also social and cultural; not only material, but also ideal, relational, historical, and symbolic; and not only private, but also public. In approaching *rus*, the natural and social sciences first became specialized, multiplied, and compartmentalized in a plurality of first-order disciplines; later, they began a process of integration into Agroecology as a second-order, multi-perspective and shared research platform. Today, Agroecology is a transdiscipline that integrates other fields of knowledge into the concept of agroecosystems viewed as socio-ecological systems. However, the law seems to still be stuck in the first stage. Following a reductionist approach, law has deconstructed and shattered the universe of *rus* into countless, disjointed legal elementary particles, multiplying the planes of analysis and, in particular, keeping Agricultural Law and Environmental Law two separate fields.

Criminal Justice in Islam Kate Daniels 2018-07-30 A formidable array of judicial talent considers all aspects of Islamic criminal procedure with the firm emphasis on its practical application today in modern states. Where do Islamic courts operate in the modern world? What training does an Islamic judge receive? How does an Islamic court deal with a criminal case? What proof and evidence does it accept? What law and practice do the Islamic judges apply to transgressions by Westerners in Saudi Arabia, whether they be accused of murder, adultery or drinking alcohol? This book attempts to answer all these and many more crucial questions of Islamic law as they affect the different nations of the Islamic World.

Historical Seismology Julien Fréchet 2008-08-22 Modern seismology has faced new challenges in the study of earthquakes and their physical characteristics. This volume is dedicated to the use of new approaches and presents a state-of-the-art in historical seismology. Selected historical and recent earthquakes are chosen to document and constrain related seismic parameters using updated methodologies in the macroseismic analysis, field observations of damage distribution and tectonic effects, and modelling of seismic waveforms.

Taking the Constitution Away from the Courts Mark Tushnet 2000-07-24 Here a leading scholar in constitutional law, Mark Tushnet, challenges hallowed American traditions of judicial review and judicial supremacy, which allow U.S. judges to invalidate "unconstitutional" governmental actions. Many people, particularly liberals, have "warm and fuzzy" feelings about judicial review. They are nervous about what might happen to unprotected constitutional provisions in the chaotic worlds of practical politics and everyday life. By examining a wide range of situations involving constitutional rights, Tushnet vigorously encourages us all to take responsibility for protecting our liberties. Guarding them is not the preserve of judges, he maintains, but a commitment of the citizenry to define itself as "We the People of the United States." The Constitution belongs to us collectively, as we act in political dialogue with each other--whether in the street, in the voting booth, or in the legislature as representatives of others. Tushnet urges that we create a "populist" constitutional law in which judicial declarations deserve no special consideration. But he warns that in so doing we must pursue reasonable interpretations of the "thin Constitution"--the fundamental American principles embodied in the Declaration of Independence and the Preamble to the Constitution. A populist Constitution, he maintains, will be more effective than a document exclusively protected by the courts. Tushnet believes, for example, that the serious problems of the communist scare of the 1950s were aggravated when Senator Joseph McCarthy's opponents were lulled into inaction, believing that the judicial branch would step in and declare McCarthy's actions unconstitutional. Instead of fulfilling the expectations, the Court allowed McCarthy to continue his crusade until it was ended. Tushnet points out that in this context and in many others, errors occurred because of the existence of judicial review: neither the People nor their representatives felt empowered to enforce the Constitution because they mistakenly counted on the courts to do so. Tushnet's clarion call for a new kind of constitutional law will be essential reading for constitutional law experts, political scientists, and others interested in how and if the freedoms of the American Republic can survive into the twenty-first century.

The Cloudspotter's Guide Gavin Pretor-Pinney 2007-06-05 Now in paperback: the runaway British bestseller that has cloudspotters everywhere looking up. Where do clouds come from? Why do they look the way they do? And why have they captured the imagination of timeless artists, Romantic poets, and every kid who's ever held a crayon? Veteran journalist and lifelong sky watcher Gavin Pretor-Pinney reveals everything there is to know about clouds, from history and science to art and pop culture. Cumulus, nimbostratus, and the dramatic and surfable Morning Glory cloud are just a few of the varieties explored in this smart, witty, and eclectic tour through the skies. Illustrated with striking photographs (including a new section in full-color) and line drawings featuring everything from classical paintings to lava lamps, *The Cloudspotter's Guide* will have enthusiasts, weather watchers, and the just plain curious floating on cloud nine.

International Disaster Response Law Andrea de Guttry 2012-08-31 With a Foreword by

Kristalina Georgieva, European Commissioner for International Cooperation, Humanitarian Aid and Crisis Response Over the last decades natural and man-made disasters have been increasing in terms of frequency, size, number of people affected and material damage caused. There is growing awareness of the importance of adequate national and international legal frameworks for disaster prevention, mitigation and response. The implementation of these frameworks, however, poses serious challenges. This book analyses International Disaster Response Law as developed in recent times and identifies the main existing normative gaps. The authors address the rights and duties of States in preventing and mitigating disasters, in facilitating access to their territory for humanitarian relief actors, as well as issues related to liability and compensation. Due attention is paid to European Union law governing disaster response (and to its reform in the light of the Lisbon Treaty) and to the main trends in domestic legislation. Human rights obligations are thoroughly examined and the potential relevance of international criminal law is assessed. Additional topics such as the status of relief personnel, the hindrances to the delivery of relief consignments by customs and excise administration, the use of civilian and military defence assets in emergency situations, the mechanisms and procedures available to offer financial support for recovery and rehabilitation, risk insurance, and the issue of corruption during disaster-related activities are specifically addressed. By drawing on the expertise of lawyers, political scientists, economists and humanitarian practitioners, the book promotes much-needed interdisciplinary dialog and sheds light on a largely uncharted field of research. It is therefore essential reading for academics and practitioners in international and EU law, policy makers, civil protection and humanitarian operators and for anyone interested in exploring the legal facets of the international community's response to large-scale calamitous events. Soft Law and Public Authorities Greg Weeks 2016-02-25 This book considers the phenomenon of soft law employed by domestic public authorities. Lawyers have long understood that public authorities are able to issue certain communications in a way that causes them to be treated like law, even though these are neither legislation nor subordinate legislation. Importantly for soft law as a regulatory tool, people tend to treat soft law as binding even though public authorities know that it is not. It follows that soft law's 'binding' effects do not apply equally between the public authority and those to whom it is directed. Consequently, soft law is both highly effective as a means of regulation, and inherently risky for those who are regulated by it. Rather than considering soft law as a form of regulation, this book examines the possible remedies when a public authority breaches its own soft law upon which people have relied, thereby suffering loss. It considers judicial review remedies, modes of compensation which are not based upon a finding of invalidity, namely tort and equity, and 'soft' challenges outside the scope of the courts, such as through the Ombudsman or by seeking an ex gratia payment.

Seppelliti nel cielo Peter Zuckerman 2013-04-02 Quando Edmund Hillary conquistò il monte Everest, al suo fianco era Tenzing Norgay e fu quella la prima volta in cui il nome di uno sherpa fece la sua comparsa sulla ribalta della cronaca. In realtà tutto l'alpinismo himalayano è segnato dalla presenza di queste silenziose figure, il cui apporto è stato tanto decisivo quanto misconosciuto dalla storia. Nell'estate del 2008 numerosi portatori sherpa attendevano al Campo base del K2, al soldo delle numerose spedizioni internazionali decise a tentare l'assalto alla vetta. Dopo settimane di attesa, finalmente il 1o agosto le condizioni meteorologiche sembravano ottimali per conquistare la Montagna selvaggia: ma l'ansia di compiere l'impresa ebbe la meglio sulla prudenza, e nell'arco di ventisette ore, dei trentotto alpinisti impegnati nella scalata ne morirono undici in quella che diventerà la più grande tragedia del K2. Circondati dalla morte, in condizioni disperate, due sherpa riuscirono a sopravvivere. Peter Zuckerman e Amanda Padoan ripercorrono le vite intrecciate di Chhiring Dorje Sherpa e Pasang Lama, seguendoli dai loro villaggi sulle pendici himalayane fino alle baraccopoli di Katmandu e attraverso i ghiacciai del Pakistan fino al Campo base del K2. Quando si scatena l'orrore nella Zona della Morte, Chhiring trova Pasang bloccato su una parete di ghiaccio, senza piccozza, fermo ad aspettare la morte. Lo soccorre e lo riporta al campo, e la vicenda di questo salvataggio, svoltosi nelle condizioni più estreme, è entrata di diritto nella leggenda dell'alpinismo. *Seppelliti nel cielo* è un'avventura appassionante e al contempo un'analisi approfondita della cultura sherpa: ne nasce l'inedita ricostruzione di una delle catastrofi peggiori nella storia dell'alpinismo da una prospettiva nuova e affascinante.

Tolerance Through Law Jens Woelk 2008 The autonomous province of South Tyrol in Northern Italy is generally considered to be one of the most successful examples for the solution of ethnic conflicts. This book gives an analysis of the evolution of the legal instruments and institutions of self-government and minority protection through power-sharing as well as of the experience gathered during decades of the implementation of a "working economy." It thus provides insights regarding the state and the evolution of this specific case as well as for the general tendencies in the development of territorial autonomy and minority protection.

[Get Us Out of Here!!](#) Nicky Eltz 2002-12-01 Dear Reader, What you are now holding is a most interesting book. The world beyond is speaking. It is offering advice, asking for help and giving answers. It exists and speaks about life -- our life here on earth and of possible consequences of our behaviour. It tells us that it is not the same to be humble, loving, good, merciful, loyal and honest as it is to be proud, loveless, bad, merciless, betraying and dishonest. At death this is not forgotten but rather remembered in total clarity. Not only is the punishment, or better yet the cleansing, spoken about; but also the length of this cleansing is so very much more. Then you ask yourself, is it possible? In the Catholic church one speaks about a transitory state which for a very long time has been referred to as Purgatory. Despite there being different theories, this state is always taken seriously. One needs it because one can only come before God cleansed and pure.

[Health Risks of Ozone from Long-range Transboundary Air Pollution](#) Markus Amann 2008 Ozone is a

highly oxidative compound formed in the lower atmosphere (from gases originating to a large extent from anthropogenic sources) by photochemistry driven by solar radiation. Owing to its highly reactive chemical properties, ozone is harmful to vegetation, materials and human health. In the troposphere, ozone is also an efficient greenhouse gas. This report summarizes the results of a multidisciplinary analysis to assess the effects of ozone on health. The analysis indicates that ozone pollution affects the health of most of the populations of the WHO European Region, leading to a wide range of health problems. The effects include some 21,000 premature deaths each year in 25 countries in the European Union on and after days with high ozone levels. Current policies are not sufficient to reduce ozone levels in the Region or their impact in the next decade.

Enhancing Participation in the Arts in the EU Victoria M. Ateca-Amestoy 2017-06-30 In this book, participation in the arts is analyzed as a substantial contributory factor to European citizenship, and also as a tool for improving individual and societal wellbeing through educational and inclusive policies. It offers an up-to-date overview of ongoing research on the measurement and analysis of, and prospects for, traditional and new forms of cultural engagement in Europe. It describes and assesses available methods and participation in the arts and seeks to determine how and to what extent the various drivers, policies and barriers matter. This publication is the final output of the work done by the members of the EU Project "Assessing effective tools to enhance cultural participation," which brought together social scientists and cultural practitioners in joint projects, conferences and seminars, to reflect on the current situation and the challenges faced by managers of cultural and arts institutions and cultural policy makers.

Storytelling and Ecology Anthony Nanson 2021-06-17 'Finalist' in the PROSE Award (2022) for Language & Linguistics Awarded Honors at the Storytelling World Awards 2022 Linking the ongoing ecological crisis with contemporary conditions of alienation and disenchantment in modern society, this book investigates the capacity of oral storytelling to reconnect people to the natural world and enchant and renew their experience of nature, place and their own existence in the world. Anthony Nanson offers an in-depth examination of how a diverse ecosystem of oral stories and the dynamics

of storytelling as an activity can catalyse different kinds of conversation and motivation, helping us resist the discourse of powerful vested interests. Detailed analysis of traditional, true-life and fictional stories shows how spoken narrative language can imbue landscapes, creatures and experiences with enchantment and mediate between the inner world of consciousness and outer world of ecology and community. A pioneering ecolinguistic and ecocritical study of oral storytelling in the modern world, *Storytelling and Ecology* offers insight into the ways that sharing stories in each other's embodied presence can open up spaces for transformation in our relationships with the ecological world around us.

Human Casualties in Earthquakes Robin Spence 2011-01-03 Assessment of human casualties in earthquakes has become a topic of vital importance for national and urban authorities responsible for emergency provision, for the development of mitigation strategies and for the development of adequate insurance schemes. In the last few years important work has been carried out on a number of recent events (including earthquakes in Kocaeli, Turkey 1999, Niigata Japan, 2004, Sichuan, China 2008 and L'Aquila, Italy 2009). These events have created new and detailed casualty data, which has not until now been properly assembled and evaluated. This book draws the new evidence from recent events together with existing knowledge. It summarises current trends in the understanding of the factors influencing the numbers and types of casualties in earthquakes; it offers methods to incorporate this understanding into the estimation of losses in future events in different parts of the world; it discusses ways in which pre-event mitigation activity and post-event emergency management can reduce the toll of casualties in future events; and it identifies future research needs.
