Digital Health and the Gamification of Life Antonio Maturo 2018-10-16 This book analyzes the role of health apps to promote medicalization. It considers whether their use is an individual matter, rather than a political and social one, with some apps based on a medical framework positively promoting physical activity and meditation, or whether data-sharing can foster social discrimination. *Surgical Approaches in Otorhinolaryngology* Walter F. Thumfart 1999 The usual surgical approaches to the head and neck region are overviewed. Subdivisions were made according to the anatomical regions and their functional correlations. The approaches are explained in a short introductory text. Their execution and indications as well as possible extensions are included. Emphasis is put on the illustrative plastic images showing the approaches in 4-colored figures. These were drawn after anatomical specimens and intrasurgical findings, therefore representing the actual anatomical situation. This is not a comprehensive textbook of surgical procedures but a clear representation of surgical approaches to the different topographical regions.

Microcirculation in Cancer Metastasis F. William Orr 1991-07-25 Although mechanisms involved in the spread of cancer have been the subject of a major research endeavor over the past decade, metastatic tumors still account for significant clinical morbidity and the failure of cancer treatment. Not only are the vascular pathways the most common route for the dissemination of cancer cells, but interactions between the cells and the circulation act as important rate-regulators for the metastatic process. This authoritative, multi-authored volume addresses the importance of microcirculation in cancer metastasis. The book begins with up-to-date reviews on the biology of endothelial cells and the structure and physiology of the normal and tumor microcirculations, and then emphasizes interactions between components of the microcirculation and cancer cells. Metastasis is discussed through chapters exploring the entry of cancer cells into the circulation, the biophysics and morphology of cancer cell traffic and arrest, interactions with host cells and the basement membranes, and angiogenesis. This fascinating book will interest oncologists, pathologists, and students of metastasis or the microcirculation.

Cancer Systems Biology Edwin Wang 2010-05-04 The unprecedented amount of data produced with high-throughput experimentation forces biologists to employ mathematical representation and computation methods to glean meaningful information in systems-level biology. Applying this approach to the underlying molecular mechanisms of tumorigenesis, cancer researchers can uncover a series of new discov

Prevention and Treatment of Cardiovascular Disease Michael J. Wilkinson 2021-08-13 This book discusses all aspects of non-pharmacologic approaches to primary and secondary CVD prevention. It

highlights the strength of evidence for particular diet styles in CVD prevention, including plant-based diets, the Mediterranean diet, the DASH diet, and low-carbohydrate diets. Chapters present evidence and future directions for diet and nutrition in diseases related to CVD, such as dyslipidemia, cardiometabolic disease (pre-diabetes, the metabolic syndrome, type-2 diabetes mellitus), and obesity. Finally, the book reviews novel and emerging aspects of dietary intervention in CVD prevention, such as dietary approaches to inflammation and the role of the microbiome in CVD. Up-to-date, evidence-based, and clinically oriented, *Prevention and Treatment of Cardiovascular Disease: Nutritional and Dietary Approaches* is an essential resource for physicians, residents, fellows, and medical students in cardiology, clinical nutrition, family medicine, endocrinology, and lipidology.

Cancer and Nutrition Roslyn B. Alfin-Slater 2013-11-11 The role of nutrition in neoplasia has been of longstanding concern. The subject was addressed by investigators in the first decade of this century, but was dropped. Vigorous attention was paid to this area of oncology in the 1940s, primarily due to the efforts of Dr. A. Tannenbaum at the Michael Reese Hospital in Chicago and the group at the University of Wisconsin in Madison. However, interest waned again until the 1970s when the question of diet and cancer was addressed and it has since been at the forefront of cancer research. The present volume (7) of *Human Nutrition: A Comprehensive Treatise* summarizes current knowledge in the area of nutrition and cancer. The first chapter is an overview written by John Higginson, whose contribution to understanding of cancer and nutrition spans several decades. The next essays cover epidemiology and physiology. The ensuing chapters address, in turn, those dietary factors relating to nutrition and cancer, namely, carbohydrates, protein, fat, cholesterol, calories, lipotropics, fiber, fruits and vegetables, vitamins, and alcohol. In a field moving as rapidly as this one is now, we can expect to miss a few late-breaking developments, but generally, the literature has been well covered through some time in 1988. Work relating to the effects of diet on oncogenes is in its very early development and has not been addressed as an entity per se.

Herbal Medicine, Healing & Cancer Donald Yance 1999-10-02 In this text, herbalist and nutritionist, Donald Yance, shows how nutrition, herbal medicine, prayer and other forms of alternative medicine can heal and prevent cancer.

The Development of the Social Self Mark Bennett 2004-07-31 Drawing upon the perspective of social

identity theory, *The Development of the Social Self* is concerned with the acquisition and development of children's social identities. In contrast to previous work on self-development, which has focused primarily on the development of the personal self, this volume makes a case for the importance of the study of the social self - that is, the self as defined through group memberships, such as gender, ethnicity, and nationality. A broad range of identity-related issues are addressed, such as ingroup identification, conceptions of social identities, prejudice, and the central role of social context. Based on contributions from leading researchers in Europe, Australia and the US, the book summarises the major research programmes conducted to date. Furthermore, the closing chapters provide commentary on this research, as well as mapping out key directions for future research. With a unique focus encompassing both social and developmental psychology, *The Development of the Social Self* will appeal to a broad spectrum of students and researchers in both disciplines, as well as those working in related areas such as sociology and child development.

L' Enneagramma Biologico® (the Biological Enneagram) Manuele Baciarelli 2017-10-23 The nine personality types and disease according to The Biological Laws of Dott. Hamer Why is it always me that falls ill? Why do some symptoms seem to accompany us throughout our lives as if we had some kind of predisposition towards certain 'diseases' rather than others? Is there a relationship between conflict content, our personal awareness of, and response to, this conflict, and personality? In other words, how exactly does the personality 'fall sick'? How does this process take place? What purpose might it serve? The Biological Enneagram brings together the nine personality types as described by the Enneagram and the biological process known as 'disease' in the light of the Five Biological Laws of R.G. Hamer

Comprehensive Geriatric Assessment Alberto Pilotto 2017-12-29 This book offers an up-to-date review on the principles and practice of multidimensional assessment and management of the older individual, which represents the cornerstone of modern clinical practice in the elderly. The early chapters cover the main elements and scope of the comprehensive geriatric approach and explain the pathways of care from screening and case finding through to in-depth assessment and treatment planning. Subsequent chapters review the evidence of how best to apply the multidimensional assessment and management approach in defined healthcare settings and within specific clinical areas, such as cancer and surgery. Finally, the education and training challenges are reviewed and

the prospects for future clinical service and research in this important field are examined. The book is very timely given the recent advances in application of this approach, which reflect the growing international realization that older people are "core business" in many clinical areas where the role of specialist geriatric medicine has hitherto been limited. Accordingly, the book will be relevant to a wide range of clinicians. The authorship comprises many of the best known and widely published experts in their respective fields.

The Epidemiology of Aging Anne Newman 2012-12-12 The average age of the world's population is increasing at an unprecedented rate and this increase is changing the world. This "Silver tsunami" emphasizes the need to provide advanced training in epidemiology and increase the cadre of experts in the study of aging. This book is designed to summarize unique methodological issues relevant to the study of aging, biomarkers of aging and the biology/physiology of aging and in-depth discussions of the etiology and epidemiology of common geriatric syndromes and diseases. Contributing authors in the book represent many disciplines, not only epidemiology and clinical geriatrics, but also demography, health services, research, cardiovascular disease, diabetes, psychiatry, neurology, social services, musculoskeletal diseases and cancer. The aim of the book is to provide a broad multidisciplinary background for any student/researcher interested in aging. The material in the book is organized and comprehensive. It represents the most up-to-date information on the scientific issues in aging research written by academics who specialize in research and training in the broad field of aging. The structure and organization of the book reflects our course series in the Epidemiology of Aging starting with the broad issues of demography and methodology, and then addressing specific health conditions and geriatric conditions common to older persons.

Cardiovascular Pathophysiology Gail G. Ahumada 1987 Written by a distinguished group of physicians and scientists, this volume provides a thorough survey of the basic mechanisms of cardiovascular disease. Each chapter begins with a brief overview of normal structure and function, and then offers a clear discussion of pathophysiologic mechanisms, covering both acquired and congenital abnormalities. Physical examination of the cardiovascular system, invasive and noninvasive diagnostic methods, and medical and surgical treatment are discussed in terms of their relation to pathophysiology, so that clinical practice is seen to proceed logically from the nature of the underlying disease process. The book is intended for students of medicine with a background in normal cardiovascular physiology who are ready to learn about important abnormalities of the system. It will enable them to understand appropriate approaches to patients with cardiovascular disease, as well as to comprehend the immense detail available in more comprehensive texts. As a concise account of the anatomic, physiologic, and pathologic basis of clinical cardiology, the book will continue to be valued in later years by those requiring a review of major pathophysiologic mechanisms.

The Challenge of Geriatric Medicine Bernard Isaacs 1992 This lucid work provides a distillation of the author's lifetime experience with and compassion for the elderly. The expression "Giants of Geriatrics", coined by the author, is used in medical language to describe the principle chronic disabilities of old age. These include immobility, instability, incontinence, and intellectual impairment. Chapters on each of these have been supplemented by chapters on five further chronic disabilities, which are stroke, aphasia, depression, and visual and auditory handicap. Each chapter ends with a short critical bibliography, and the most significant points are encapsulated in original aphorisms. The aim is to provide practical guidance in non-specialist language for management of the "Giants", concentrating on areas of geriatric medicine which are not normally available in standard textbooks.

Signs and Symptoms in Emergency Medicine Scott R. Votey 2006 Current and concise, the updated and revised 2nd Edition of this pocket-sized reference reflects the substantial changes shaping the evaluation and treatment of many emergency conditions today. Its unique "signs and symptoms" approach offers the quickest possible way to diagnose critical conditions in an emergency situation. Organized around presenting symptoms, it can be used in real time to answer patient care questions. Diagnoses are listed in order of their severity in each chapter, with the symptoms, signs, suggested workup, and patient disposition given for each diagnosis. Uses a symptom-based approach for quick diagnosis. Features an outline format for real-time reference. Focuses on the 200 conditions most frequently encountered in the emergency room. Presents a useful tool for evaluating the likelihood that a specific symptom - or symptoms - denotes a particular disease, and allows the reader to initiate an appropriate treatment. Includes new chapters on emergency situations involving biological, chemical, and radiation terrorism - chapters devoted to the challenges presented by patients with AIDS and those with organ transplants - two chapters on environmental emergencies - one chapter examining heat illness, hypothermia, and submersion injury - and a chapter on envenomations. Features expanded "Treatment Considerations" sections.

Inherited thrombophilia Sics Editore 2014-10-01 Inherited thrombophilia increases the likelihood of venous thrombosis. The highest risk is associated with severe inherited thrombophilia which, if diagnosed, will often affect the duration of treatment in patients with venous thrombosis. High-risk thrombophilia is associated with antithrombin deficiency homozygosity for FV Leiden or prothrombin G20210A mutation simultaneous heterozygosity for several gene defects (double heterozygosity) protein C, and possibly protein S, deficiency. Solitary heterozygous FV Leiden or prothrombin mutation will increase the thrombotic risk only slightly. The association between inherited thrombophilia and arterial occlusion is less clearly demonstrated. In practice, arterial obstruction should only raise a suspicion of inherited thrombophilia if encountered in a young person with no known risk factors. Predisposition to thrombotic events may also be caused by acquired disturbances in the coagulation system, the most important of which is the presence of circulating phospholipid antibodies.

Prechtl's Method on the Qualitative Assessment of General Movements in Preterm, Term and Young Infants Christa Einspieler 2008-12-03 A quick, non-invasive, non-intrusive and cost-effective method with high reliability and high validity is much in demand for the early detection of neurological anomalies which point to cerebral palsy and developmental deficits later on in life. Over his years as a distinguished developmental neurologist, Heinz Prechtl has devised such a method; a qualitative assessment of general movements (GMs) as a specific predictor for neurological impairments. His method is described in this book. GMs form part of a distinct pattern of movements in preterm babies, term newborns and young infants. They are complex, frequent, and usually of sufficient length. Changes in the normal quality of GMs are a reliable indicator of brain dysfunction. Includes a CD-ROM giving 15 cases selected from the book. Each is of about one minute in duration and demonstrates the different age-specific movement patterns.
