Hospitality Retail Management Conrad Lashley 2009-11-03 'Hospitality Retail Management' provides students and managers with a practical guide to managing units in hospitality retail organizations. Customers rely on a particular chain of hotels, restaurants or pubs to provide the same level of service and environment across the board. This standardised service provides the customer with the security of knowing what to expect from that particular organisation. However, this standardisation allows little room for creativity for individual managers to respond to the particular needs of their local market. There is a growing realisation that there is greater profitability if the chain can offer both standardised services across all its retail operations while at the same time allowing local managers the freedom to interpret the needs of its local market as they see fit. 'Hospitality Retail Management' shows managers and students how competitive advantage can be gained by adopting management techniques which are both 'tight and loose', and demonstrates how you can manage businesses with well-defined objectives while also allowing local managers to interpret their local market as they see fit. Conrad Lashley has done extensive consultancy with companies such as McDonalds and uses case studies from these companies to reiterate key issues throughout the text.

Quality management systems for the food industry Andrew Bolton 2012-12-06 In recent years there has been growing pressure for consistent product quality, and a need for companies to demonstrate sound quality management practices in order to meet 'Due Diligence' requirements of both legislation and the quality assurance practices of customers. It has become accepted that operating to the requirements of the international standard for quality management - BS EN ISO 900- goes a long way towards meeting these needs. The objective of this book is to explain the requirements of the standard, to offer advice about achieving those requirements and to indicate what the assessors will look for at assessment time. It is important that certification to the standard is sought to support achievement of company objectives and not the reverse, and of course the standard can apply to organizations and services, just as much as to companies. Thus the word 'company' in the text should be treated accordingly. Illustrative material has been presented under the logo of a fictitious company 'Quality Food Services' - in this context QFS does not bear any relationship whatsoever to any identically or similarly named business that may exist. Readers will find it helpful to read the book with a copy of the standard to hand, and are strongly encouraged to read the complete text before taking any steps to prepare for certification to the standard.

Operations Management on the Airport Perimeter. In-flight Catering and Services Patrick Wiget 2021-01-28 Academic Paper from the year 2019 in the subject Business economics - Business Management, Corporate Governance, grade: 69, , language: English, abstract: This paper refers to a catering supplier called creative catering Ltd. (CC), based in Basel, Switzerland. In 2015, they opened a new branch called "In-flight Services and Catering" (ISC), providing services to the in-flight industry. ISC serves on a high-class level to private, corporate, governmental and royal customers from an international setting with multicultural backgrounds who do not have a local airline service for their needs. ISC cannot be compared to the more basic services provided on first-class charter flights (CF), because it provides to a smaller audience focusing much more on individual needs than a CF. ISC is delivering up to four flights a day, to small business jets and wide-body long-haul aircraft. In 2018 the ISC generated a revenue of CHF 280,000 which is about a fourth of the CC total income. The combination of services and goods provided by ISC in relation with the difficult forecasting situation will be discussed thoroughly throughout the paper. This difficult relationship shows how important a clearly defined operations management and process setup is. Catering is the largest part of the branch, therefore, this paper mainly considers the in-flight catering sector with its process of the ordering system, discussing the vulnerability and challenges within the system and analysing a lean approach to improve its performance and evaluate new findings.

Concurrent Engineering C.S. Syan 2012-12-06 BACKGROUND There is an increasing awareness that 'time to market' is the key competitive issue in the manufacturing industry today. The global markets are demanding products that are well designed, are of high quality and are at low prices with ever decreasing lead times. Hence manufacturers are forced to utilize the best methods of technology with efficient control and management accompanied by suitably enabling organizational structures. Concurrent engineering (CE) is widely seen to be the methodology that can help satisfy these strenuous demands and keep the profitability and viability of product developers, manufacturers and suppliers high. There have been many reported successes of CE in practice. Rover were able to launch Land Rover Discovery in 18 months as compared with 48-63 months for similar products in Europe. Because of its early introduction to the market it became the best selling product in its class. AT&T report part counts down to one ninth of their previous levels and quality one hundred times (in surface defects) for VLSI (very improvements of large scale integration) circuits as a result of using the CE approach. WHO SHOULD READ THIS TEXT? This book will aim to provide a sound basis for the very diverse subject known as concurrent engineering. Concurrent engineering is recognized by an increasingly large proportion of the manufacturing industry as a necessity in order to compete in today's markets. This recognition has created the demand for information, awareness and training in good concurrent engineering practice.
