Leveraging Data Science for Global Health Leo Anthony Celi 2020-07-31 This open access book explores ways to leverage information technology and machine learning to combat disease and promote health, especially in resource-constrained settings. It focuses on digital disease surveillance through the application of machine learning to non-traditional data sources. Developing

countries are uniquely prone to large-scale emerging infectious disease outbreaks due to disruption of ecosystems, civil unrest, and poor healthcare infrastructure – and without comprehensive surveillance, delays in outbreak identification, resource deployment, and case management can be catastrophic. In combination with context-informed analytics, students will learn how non-traditional digital disease data sources – including news media, social media, Google Trends, and Google Street View – can fill critical knowledge gaps and help inform on-the-ground decision-making when formal surveillance systems are insufficient.

Strategies for Information Technology Governance Wim Van Grembergen 2004-01-01 The advent of the Information Society is marked by the explosive penetration of information technologies in all aspects of life and by a related fundamental transformation in every form of the organization. Researchers, business people and policy makers have recognized the importance of addressing technological, economic and social impacts in conjunction. For

example, the rise and fall of the dot-com hype depended a lot on the strength of the business model, on the technological capabilities available to firms and on the readiness of the society and economy at large sustain a new breed of business activity. However, it is notoriously difficult to examine the cross-impacts of social, economic and technological aspects of the Information Society. This kind of work requires multidisciplinary work and collaboration on a wide range of skills. Social and Economic Transformation in the Digital Era addresses this challenge by assembling the latest thinking of leading researchers and policy makers. The book covers all key subject areas of the Information Society and presents innovative business models, case studies, normative theories and social explanations

This title provides clear and readily applicable guidance to corporate board members on the involvement of boards of directors in information technology (IT) governance. Specifically, it demonstrates ways in which board members can execute IT duties effectively. Specific tools such as a roadmap towards digital transformation and a board-level dashboard for digital strategy and oversight are also offered. While organizations are increasingly dependent on IT for the creation of business value, the evidence seems to indicate that boards of directors are not as involved in IT-related strategic decision-making and control as they should be. Research shows that high levels of board-level IT governance, regardless of existing IT needs, will improve organizational performance. This book provides unique insights into the inner workings of a specific board of directors group, with a focus on its IT governance structures and processes.

Managing Technology for Business Value Stephen McLaughlin
2020-05-07 This book will appeal primarily to postgraduate business studies students who seek to better understand how to use technology to improve organizational performance. It provides insights into how technology can both positively and negatively influence the way we create, share, and act upon information and knowledge. Taking as a starting point the premise that we now live and operate in a knowledge intensive, information-driven world, where data is arguably the most valuable resource any organization possesses, it argues that we cannot see technology simply as a commodity or a cost to the business. Therefore, every organizational decision-maker must be more aware of the impact technology can have on the knowledge practices and habits of employees, building and sustaining collaborative relationships, and the ability to realise strategic goals in a dynamic and highly competitive environment.
