Introduction to Anticipation Studies Roberto Poli 2017-08-28 This book presents the theory of anticipation, and establishes anticipation of the future as a legitimate topic of research. It examines anticipatory behavior, i.e. a behavior that 'uses' the future in its actual decisional process. The book shows that anticipation violates neither the ontological order of time nor causation. It explores the question of how different kinds of systems anticipate, and examines the risks and uses of such anticipatory practices. The book first summarizes the research on anticipation conducted within a range of different disciplines, and describes the connection between the anticipatory point of view and futures studies. Following that, its chapters on Wholes, Time and Emergence, make explicit the ontological framework within which anticipation finds its place. It then goes on to discuss Systems, Complexity, and the Modeling Relation, and provides the scientific background supporting anticipation. It restricts formal technicalities to one chapter, and presents those technicalities twice, in formal and plain words to advance understanding. The final chapter shows that all the threads

presented in the previous chapters naturally converge toward what has come to be called "Discipline of Anticipation"

Coping and Self-Concept in Adolescence H.A. Bosma 2012-12-06 Self-concept and coping behaviour are important aspects of development in adolescence. Despite their developmental significance, however, the two areas have rarely been considered in relation to each other. This book is the first in which the two areas are brought together; it suggests that this interaction can open the way to new possibilities for further research and to new implications for applied work with adolescents. Two separate chapters review research carried out in each of the areas. These are followed by a series of more empirically focussed chapters in which issues such as changes in relationship patterns, difficult school situations, leaving school, use of leisure, anxiety and suicidal behaviour are examined in the context of self-concept and coping. The final chapter seeks to identify some of the central themes emerging from this work and discusses possible research and applied implications.

Interdisciplinary Pediatric Palliative Care Joanne Wolfe 2022-01-11 Interdisciplinary Pediatric Palliative Care provides a uniquely integrated, comprehensive resource about palliative care for seriously ill children and their families. The field of palliative care is based on the fundamental principle that an interdisciplinary team is optimal in caring for patients and their families throughout the illness trajectory. The text integrates

themes including goals of care, discipline-specific roles, cultural and spiritual considerations, evidence-based outcomes, and far more. It emphasizes the value of words and high-quality communication in palliative care. Importantly, content acknowledges challenging periods between team members, and how those can ultimately benefit team, patient, and family care outcomes. Each chapter includes the perspective of the family of a seriously ill child in the form of a vignette to promote care team understanding of this crucial perspective. This second edition is founded on a wealth of evidence that reflects the innovations in pediatric palliative care science over the past 10 years, including initiatives in clinical care, research, and education.

Interdisciplinary Pediatric Palliative Care is appropriate for all pediatric palliative clinicians (PPC), including physicians, nurses, psychosocial clinicians, chaplains, and many others. All subspecialists who deliver care to seriously ill children, will find this book a must-have for their work. Advance Praise for Interdisciplinary Pediatric Palliative Care, Second Edition "This new edition is as much a testament to pediatric palliative care's remarkable evolution as a field as it is a quintessential playbook for providing the high-quality holistic and compassionate care that families with seriously ill children desperately want. Every page thoughtfully weaves together how interprofessional teams can contribute collaboratively to learning about and supporting the preferences, needs and priorities of the precious patients and families in their circle of care. It is a must read for all practitioners to enhance their palliative care understanding, appreciation and ability as a foundation for optimizing quality of life in practice." - Rebecca Kirch, JD, Executive Vice President of Policy and Programs, National Patient Advocate Foundation "This book offers a truly contemporary and comprehensive view of the entire field of pediatric palliative care. The focus on social determinants of health, cultural humility, and disparities in care could not be timelier, and the section highlighting conflict and

conflict resolution should be required reading. The continued and purposeful inclusion of interdisciplinary clinicians in producing each chapter models the palliative care team itself-an approach in which all voices are necessary as we seek to provide the most compassionate care possible." - Rachel Thienprayoon, MD, MSCS, FAAP, FAAHPM, Associate Professor of Anesthesia, Medical Director, StarShine Hospice and Palliative Care, Cincinnati Children's Hospital Medical Center

Constructing a Mind Antonio Imbasciati 2006-09-27 Can the Protomental System provide a new foundation for psychoanalytic theory? Constructing a Mind draws on psychoanalytic theories of mind and recent developments in cognitive science to present the Protomental System, a new and original explanatory theory of the development of the human mind. This book aims to move psychoanalytic theory away from its origins in Freud's theory, towards a model which gives priority to cognition and memory. This, Antonio Imbasciati argues, will make possible a successful and productive integration of psychoanalysis with other areas of psychology. Subjects covered include: The mind as an information-processing system Constructing the system: from fetus to baby, child, and finally adult The caregiver relationship as a decoding system for information processing The paranoid-schizoid metabolism of information Memory of functions and

memory traces of affects Internal information generated by the system The depressive position and learning to know Reparation and thought. This thoughtful and thorough account of cognitive development provides a conceptual framework that succeeds in making some of the more complex areas of psychoanalytic theory more intelligible. Constructing a Mind will be of great interest to psychoanalysts, psychotherapists and cognitive psychologists, especially those with an interest in neuropsychology and neonatal development.

Mission of the University Jose Ortega y Gasset 2014-09-25 In 1930, the great Spanish philosopher Jos Ortega y Gasset set forth a program for reforming the modern Spanish university. Aware that the missions of the university are many and often competing, Ortega built his program around a conception of a "general culture" that knows no national boundaries or time limits and could fit into any national system of higher education. His ideas are especially pertinent to contemporary debate in America over curriculum development and the purpose of education. In this volume Ortega sought to answer two essential questions: what is the knowledge most worth knowing by all students and what is the function of the university in a modern democracy? Basing his answers on his own deep personal culture and an extensive knowledge of the various European university systems, Ortega defined four primary missions: the teaching of the learned professions, the fostering of scientific research, training for political leadership, and finally the creation of cultured persons with the ability to make intellectual interpretations of the world. Ortega's understanding of "general culture" is set out in great detail here. He meant an active engagement in ideas and issues that were both historical and contemporary. His concern is with the classical problems of justice, the good society, who should rule, and the responsibilities of citizenship. This edition first published in 1998. Routledge is an imprint of Taylor & Francis, an informa company.

[Cognitive Therapy of Eating Disorders on Control and Worry](#)

Sandra Sassaroli 2011 The aim of this book is to illustrate a variant of the standard cognitive treatment for eating disorders. This therapy is based on the principle that assessing and treating the patient's process of worry and sense of control fosters greater understanding of the psychopathology of the eating disorder and increases the efficacy of cognitive treatment. The book is an edited collection of chapters that discuss the psychopathological roles played by control and worry in eating disorders, and provide a detailed description of the therapeutic protocol, which primarily focuses on the treatment of the cognitive factors of control and worry as core factor of a psychotherapy of eating disorders. In addition, the book shows contributions from other theorists in the field who have investigated the role of worry, preoccupation, and control, or who explore the connections between worry, control, and other emotional factors underlying eating disorders, such as perfectionism, self-esteem, and impulsivity.

Compendium of the Social Doctrine of the Church Catholic Church. Pontificium Consilium de Iustitia et Pace 2005

School Dropout and Completion Stephen Lamb 2010-11-29 School dropout remains a persistent and critical issue in many school systems, so much so that it is sometimes referred to as a crisis. Populations across the globe have come to depend on success at school for establishing careers and gaining access to post-school qualifications. Yet large numbers of young people are excluded from the advantages that successful completion of school brings and as a result are subjected to consequences such as higher likelihood of unemployment, lower earnings, greater dependence on welfare and poorer physical health and well-being. Over recent decades, most western nations have stepped up their efforts to reduce drop out and raise school completion rates while maintaining high standards. How school systems have approached this, and how successful they are, varies. This book compares the various approaches by evaluating their impact on rates of dropout and completion. Case studies of national systems

are used to highlight the different approaches including institutional arrangements and the various alternative secondary school programs and their outcomes. The evaluation is based on several key questions: What are the main approaches? How do they work? For whom do they work? And, how successful are they in promoting high rates of completion and equivalent outcomes for all? This book examines the nature of the dropout problem in advanced industrialized countries with the goal of developing a broader, international understanding that can feed into public policy to help improve completion rates worldwide.

Psychoanalytic Therapy Franz Alexander 1980-01-01 First published in 1946, Psychoanalytic Therapy stands as a classic presentation of "brief therapy". The volume, which is based upon nearly six hundred cases, derives from a concerted effort at the Chicago Institute for Psychoanalysis to define the principles that

make possible a psychotherapy shorter and more efficient than traditional psychoanalysis and to develop specific techniques of treatment. While taking a psychoanalytic approach, the authors urge the therapist to plan carefully and sensibly to avoid letting every case drift into "interminable" psychoanalysis. They address not only psychiatrists and psychoanalysts, but also psychologists, general physicians, social workers, and "all whose work is closely concerned with human relationships."

Essays on Ego Psychology Heinz Hartmann 1976

The Racing Game Marvin B. Scott This study of a unique social world probes beneath the thrill and spectacle of horse racing into the lives of the "honest boys," the "gyps," the "manipulators," the "stoops," and the "Chalk eaters"--the constituents of race track society and the players of the racing game. With scientific precision and journalistic vigor, Scott describes the everyday activities--the objectives and strategies--of those whose lives are organized around track proceedings and who compete with chance and one another. The players in the racing game range from track owners to stable boys, from law enforcers to lawbreakers, and from casual sportsmen to pathologically addicted gamblers. Considering the self-interests, the normative and operational codes, and the interactional relationships among the major types and subtypes of participants, the author defines the components of strategic movement within the framework of rules and resources to show how a player's relations to the "means of production" governs his behavior. The fruitful application of sociological theory and method to an unusually interesting social context makes this particularly useful still for courses in social problems and the sociology of organizations and of leisure. "...when he was teaching at Berkeley, Goffman asked me to come to his seminar to hear a student, Marvin Scott, present his research on horse racing. ...in the course of his

presentation, Scott suggested in passing that gamblers, including horse players, sometimes had winning streaks' or losing streaks.' Goffman, who had been listening appreciatively until that point, interrupted to say that of course Scott meant that they thought they had such streaks of good or bad luck. But Scott said no, these were observable facts.' Goffman, unwilling to accept such supernatural talk, persisted, appealing to the laws of probability to assure Scott that such streaks' were natural occurrences in any long run of tries in such a game as blackjack or craps."--Howard Becker Marvin B. Scott retired in 2001 as professor of sociology at Hunter College, City University of New York. He previously taught at San Francisco State College and received his Ph.D. in 1966 at the University of California, Berkeley. Jaime Suchlicki is Bacardi Professor of History at the Graduate School of International Studies at the University of Miami, and executive director of its Cuban-American and Cuban Center.

The Case Against Adolescence Robert Epstein 2007 This groundbreaking book argues that adolescence is an unnecessary period of life that people are better off without. Robert Epstein, former editor-in-chief of "Psychology Today," shows that teen turmoil is caused by outmoded systems put into place a century ago which destroyed the continuum between childhood and adulthood. Where this continuum still exists in other countries, there is no adolescence. Isolated from adults, American teens learn everything they know from their media-dominated peers--"the last people on earth they should be learning from," says Epstein. Epstein explains that our teens are highly capable--in some ways more capable than adults--and argues strongly against "infantilizing" young people. We must rediscover "the adult in every teen," he says, by giving young people adult authority and responsibility as soon as they can demonstrate readiness. This landmark book will change the thinking about teens for decades to come.
