Medieval Welsh Medical Texts Diana Luft 2020-06-01 OPEN ACCESS To view Medieval Welsh Medical Texts for free click on the following links:

https://www.uwp.co.uk/app/uploads/MWMT_final_low-res-1.pdf <https://www.ncbi.nlm.nih.gov/books/NBK558253/> This volume presents the first critical edition and translation of the corpus of medieval Welsh medical recipes traditionally ascribed to the Physicians of Myddfai. These offer practical treatments for a variety of everyday conditions such as toothache, constipation and gout. The recipes have been edited from the four

earliest collections of Welsh medical texts in manuscript, which date from the late fourteenth century. A series of notes provides sources and analogues for the recipes, demonstrating their relationship with the European medical tradition. The identification of herbal ingredients in the recipes is based on pre-modern plant-name glossaries rather than modern dictionaries, and has led to new interpretations of many of the recipes. Comprehensive glossaries allow the reader to find any recipe based on the ingredients and equipment used in it or the condition treated. This new interpretation of these texts clearly shows that they are not unique, but rather form part of the medical tradition that was common throughout Europe during the Middle Ages.

Neurobiology of Chemical Communication Carla Mucignat-Caretta 2014-02-14 Intraspecific communication involves the activation of chemoreceptors and subsequent activation of different central areas that coordinate the responses of the entire organism—ranging from behavioral modification to modulation of hormones release. Animals emit intraspecific chemical signals, often referred to as pheromones, to advertise their presence to members of the same species and to regulate interactions aimed at establishing and regulating social and reproductive bonds. In the last

two decades, scientists have developed a greater understanding of the neural processing of these chemical signals. Neurobiology of Chemical Communication explores the role of the chemical senses in mediating intraspecific communication. Providing an up-to-date outline of the most recent advances in the field, it presents data from laboratory and wild species, ranging from invertebrates to vertebrates, from insects to humans. The book examines the structure, anatomy, electrophysiology, and molecular biology of pheromones. It discusses how chemical signals work on different mammalian and non-mammalian species and includes chapters on insects, Drosophila, honey bees, amphibians, mice, tigers, and cattle. It also explores the controversial topic of human pheromones. An essential reference for students and researchers in the field of pheromones, this is also an ideal resource for those working on behavioral phenotyping of animal models and persons interested in the biology/ecology of wild and domestic species.
