**Battle of Britain Memorial Flight** Jarrod Cotter 2017-04-30 In 2007 the Battle of Britain Memorial Flight celebrated its landmark 50th anniversary and Jarrod Cotter was chosen to write a book charting the Flight's history which began with the formation of the Historic Aircraft Flight in July 1957. This volume brings the story fully up-to-date to mark the BBMF's 60th anniversary. It still includes the in-depth story of the formation of the Flight, for which the author uniquely traced the families of those involved to reveal a host of illuminating insights. However, while the 50th anniversary book went on to tell the rest of the story in an in-depth fashion, this volume utilizes high quality color digital photographs taken in recent years to show the aircraft in flight and so acts as the perfect companion to the first volume. This will be the ultimate souvenir of the celebration of the BBMF's 60th anniversary.

**U. S. Marines in the Gulf War, 1990-1991** Paul C. Westermeyer 2014-09-22 Liberating Kuwait is the official history of U.S. Marine Corps operations during the 1990-1991 Gulf War with Iraq. It covers such topics as Marines in the embassies in Kuwait and Iraq, Operations Desert Shield and Desert Storm, the Battle of al-Khafji, the liberation of Kuwait, and the amphibious feint. Contains 24 color maps and numerous black and white and color photographs.

**Adventures of a Cold War Fast-Jet Navigator** David Herriot 2017-10-30 An RAF navigator's lively, candid memoir of flying low and living fast during the Cold War years. David Herriot served almost forty years in the Royal Air Force as a navigator, first on the Buccaneer S2 and subsequently on the Tornado GR1. This volume recounts his early career operating the Buccaneer on three operational flying tours, plus a tour as an instructor on the Operational Conversion Unit. With almost 2500 hours on an aircraft that was operated at high speed, in all weathers and at ultra-low level, his task in the rear seat was a demanding one. But Herriot was more than just the guy in the back of a Buccaneer; he was, quite routinely, and often to the exasperation of his seniors, the life and soul of any party that was taking place either at home base or when overseas defending the flanks of NATO. This is an epic adventure for the aviation enthusiast, particularly those with affection for the Blackburn Buccaneer, and it provides a great deal more than the usual introduction to a specific aircraft type and the people who flew it. Here you'll find an absolute insight into life on a fast-jet squadron, at work and mischievous play during the Cold War—and you'll also be introduced to some of the modern RAF's greatest characters.

**The Encyclopedia of Middle East Wars [5 volumes]** Spencer C. Tucker 2010-10-08 This in-depth study of U.S. involvement in the modern Middle East carefully weighs the interplay of domestic, cultural, religious, diplomatic, international, and military events in one of the world's most troubled regions. The monumental, five-volume *The Encyclopedia of Middle East Wars: The United States in the Persian Gulf, Afghanistan, and Iraq Conflicts* is a must-have resource for anyone seeking to comprehend U.S. actions in this volatile region. Under the expert editorship of Spencer C. Tucker, the encyclopedia traces 20th- and 21st-century U.S. involvement in the Middle East and south-central Asia, concentrating on the last three decades. Beginning with the 1980–1988 Iran-Iraq War, it covers the 1979–1989 Soviet occupation of Afghanistan, the 1991 Persian Gulf War, allied punitive actions against Iraq during the 1990s, the Afghanistan War, the Iraq War, and the Global War on Terror. Many smaller military actions against Iran, Iraq, Libya, Afghanistan, and other regimes that have been involved in international terrorism are also included. Diplomacy, religion as it pertains to Middle East conflict, and social/cultural developments are other key subjects of analysis, as is the interplay of politics with military policy in the United States and other nations involved in the region.

**British Generals in Blair's Wars** Jonathan Bailey 2016-04-15 *British Generals in Blair's Wars* is based on a series of high profile seminars held in Oxford in which senior British officers, predominantly from the army, reflect on their experience of campaigning. The chapters embrace all the UK's major operations since the end of the Cold War, but they focus particularly on Iraq and Afghanistan. As personal testimonies, they capture the immediacy of the authors' thoughts at the time, and show how the ideas of a generation of senior British officers developed in a period of rapid change, against a background of intense political controversy and some popular unease. The armed forces were struggling to revise their Cold War concepts and doctrines, and to find the best ways to meet the demands placed upon them by their political leaders in what was seen to be a 'New World Order'. It was a time when relations between the Government of the day and the armed services came under close scrutiny, and when the affection of the British public for its forces seemed to grow with the difficulty of their operational tasks. This is a truly unique and invaluable book. For the first time, we are offered first-hand testimony about Britain's involvement in recent campaigns by senior participants. In addition to touching on themes like civilian-military relations, the operational direction of war and relationships with allies, these eyewitness accounts give a real sense of how the character of a war changes even as it is being fought. It will be essential reading for those in military academies and staff colleges, not only in Britain but throughout NATO, and especially in the USA. It also has profound policy implications, as both the UK and NATO more generally reassess their strategies and the value of intervention operations. It will also become a primary source for historians and students of the wars, in Iraq and Afghanistan in particular.

**Air Power History** Sebastian Cox 2013-11-05 The 20th century saw air power transformed from novelists' fantasy into stark reality. From string and canvas to precision weaponry and stealth, air power has progressed to become not only the weapon of first political choice, but often the only conceivable option. This rapid development has given rise to considerable debate and controversy with those holding entrenched views rarely slow to shout their case. Many myths have grown over the period, ranging from the once much vaunted ability of air power to win wars alone through to its impact as a coercive tool. This volume examines the theory and practice of air power from its earliest inception. The contributors have been drawn from academia and the military and represent some of the world's leading proponents on the subject. All significant eras on air power employment are examined: some are evidently turning points, while others represent continuous development. Perhaps more importantly, the book highlights the areas that could be considered to be significant, and invites the reader to enter the debate as to whether it constitutes a continuum, a turning point, or indeed a revolution.

**RAF Tornado Units of Gulf War I** Michael Napier (Air pilot) 2021 When the Gulf Crisis of 1990 was triggered by the Iraqi invasion of Kuwait, the RAF responded by sending Tornado F 3 fighters to Saudi Arabia to help defend the country against further aggression. These aircraft were followed by the deployment of Tornado GR 1 strike/attack aircraft to Bahrain. Eventually three wings of Tornado GR 1s were established in Bahrain, Tabuk and Dhahran, as well as a detachment of Tornado GR 1A reconnaissance aircraft. At the start of hostilities in January 1991, the Tornado GR 1 wings carried out night-low-level attacks against Iraqi Main Operating Bases using the JP233 runway denial weapon. Meanwhile, Combat Air Patrols from the Tornado F 3 wing ensured the integrity of Saudi airspace. Once air supremacy had been established, the Tornado GR 1 force moved to medium-level operations, initially by night and later by day, to attack the Iraqi oil production and storage infrastructure. The arrival in theatre of a laser designation capability with Pave Spike/Buccaneer and TIALD/Tornado enabled precision attacks against the Iraq transport system to cut off the frontline troops from resupply and reinforcement and then to carry out a systematic destruction of the airfield facilities. Tornado GR 1A reconnaissance operations played a major role in the location of Scud missile launchers and in the planning and execution of the land offensive. Throughout the conflict, the Tornado F 3 wing at Dhahran carried out defensive counter-air operations to ensure the safety of the base areas.

**Rethinking History, Dictatorship and War** Claus-Christian Szejnmann 2011-11-03 The main focus of this book is to analyse and explain, rather than merely narrate, developments of modern war. The volume will

present up-to-date and genuinely original scholarship that has not been previously published. This collection deals with three of the most important themes of historical studies: the way history is or ought to be written, the nature of dictatorships, and the nature of wars. The primary focus is on modern Europe and two defining experiences in the first half of the twentieth century, namely the First and Second World Wars and totalitarian dictatorships. Both remain issues of intense debates and with ever widening ramifications. It provides a unique overview of the current state of research on three important themes that are of great interest to scholars, and students. Each essay and a substantial introduction summarises complex findings, approaching the topic from a variety of perspectives (19th and 20th century history; national and regional history; comparative history; cartography; and, biographical, intellectual, structural, social and military history) thus challenging traditional interpretations and methodologies, and addressing unresolved questions. The book brings together a mix of established and younger experts thinking critically about these major themes and writing accessible and stimulating pieces that challenge existing interpretations and suggest ways the subjects are changing. The contributors tackle big issues and dare to come up with bold explanations.

**Weapons of Mass Destruction** Eric A. Croddy 2018-10-12 Whether one is interested in learning about anthrax, sarin, the neutron bomb—or any other weapon of mass destruction—this thorough and detailed reference is the place to find answers. The threat posed by weapons of mass destruction (WMD), whether nuclear, radiological, chemical, or biological, is the number-one topic of concern for the intelligence community, first responders, policymakers, and myriad non-governmental organizations—and many members of the general public. This authoritative reference will serve all of those parties by covering the full spectrum of mass-casualty weapons. The guide will not only enable people to educate themselves, but also to separate the truth from the spurious information that abounds. The book offers an A-to-Z listing of major topics, making finding information about concepts, scientific theories, and realities of WMD fast and easy. While the framework of WMD goes back centuries, the major focus of this reference is on weapons that date from the use of chemical warfare in World War I. The book also covers WMD from the early nuclear era (World War II), the Cold War, and the present (Syria, North Korea, etc.). Each entry is written in a clear, accessible style and includes crucial background information, making this book an essential resource for both lay readers and specialists. Armed with this portable database, readers will have the confidence to deal with, discuss, or write about WMD of all kinds based on an understanding of relevant concepts, policies, and scientific fundamentals.

**Tornado** John Nichol 2021-06-10 Former Tornado Navigator John Nichol tells the incredible story of the RAF Tornado force during the First Gulf War in 1991; the excitement and the danger, the fear and the losses. It is an extraordinary account of courage and fortitude. 'We were doing about 620 miles-per-hour, 200 feet above the desert, in total darkness. Everything was running on rails as we approached the target. Then all hell broke loose. I remember the missile being fired at us; I broke left and shouted, "Chaff!" 'All I could see was a flame, like a very large firework, coming towards me. Then there was a huge white flash. I remember an enormous wind and then I was knocked unconscious. My last thoughts were that I was going to die.' In 1990, Iraqi dictator Saddam Hussein ordered the invasion and occupation of neighbouring Kuwait, setting in motion a chain of events that had unimaginable political, military and personal repercussions, which still reverberate around the globe today. This is the story of the aircrew at the heart of Operation Desert Storm, almost none of whom had any prior experience of armed combat. It is the story of the Tornado's missions, of those who did not return - and of the families who watched and waited as one of the most complex conflicts in recent history unfolded live on television. It is a story of untold fear and suffering, and astounding courage in the face of hitherto unimaginable adversity.

**A Brief History of Modern Warfare** Richard Connaughton 2013-02-07 Since Vietnam, both the way we fight and our reasons for going to war have become much more complex. The importance of a conflict is determined not by its size or by the numbers of combatants involved but by its ripple effects and its influence upon future events. In a series of thrilling recreations of eight of the most significant encounters of the last three decades, military historian Richard Connaughton presents a fascinating insight into modern warfare, including interviews with some of the major figures. The conflicts include Goose Green in the Falklands, the invasion of Grenada, Operation Desert Storm - the first Iraq War, Operations in Mogadishu as immortalized in the book and film Blackhawk Down, the Siege of Gorazde and Operation Barras in Sierra Leone, as well as more recent events at Fallujah, Iraq, and in Helmand Province, Afghanistan. Richard Connaughton has interviewed most of the major figures involved in each of the conflicts and offers powerful insights into why battles either work or don't. This book will tell you what warfare means in the contemporary world and how it can affect tomorrow.

**Panavia Tornado** Dave Windle 2011-02-23 The Tornado has been the backbone of the RAF within its many different theaters of operation. The aircraft started as a European venture between Germany, Italy and the UK, based on the original swing-wing technology invented by Barnes-Wallis. It has also been successfully exported to several Middle-Eastern air forces. It is likely to remain in service for several years to come. This book contains the world famous color profiles created by Dave Windle of the type in different operational modes, configurations and color schemes. Martin Bowman has written detailed descriptions and photographs to create the perfect enthusiasts reference.

**RAF Tornado Units in Combat 1992-2019** Michael Napier 2022-01-20 After the Gulf War of 1990, No Fly Zones (NFZ) were established over northern and southern Iraq and the Tornado GR 1 force stepped up to operations over the southern NFZ. The Tornado GR 4 took responsibility for RAF combat air operations in Afghanistan from the Harrier force in 2009, and in 2011 was involved in missions against the Gaddafi regime in Libya. The unique multirole capabilities of the aircraft enabled it to support ground operations with the Raptor reconnaissance pod, Brimstone missiles and Paveway IV laser-guided bombs until withdrawal in 2014. The Tornado GR 4 was also used for operations over Iraq and Syria against the ISIL terrorist organisation. Intensive air operations were flown between 2014 and 2019, when the Tornado GR 4 was finally withdrawn from RAF Service. This volume, written by former RAF pilot Michael Napier, provides detailed first-hand accounts of the missions undertaken by the Tornado crews during the most recent conflicts over the Middle East and the Balkans.

**Red Flag** Tyson V. Rininger 2006 Red Flag takes the reader behind the scenes of the biggest, most complex, high-tech military exercise conducted anywhere in the world. The Red Flag exercises, which take place at Nellis Air Force Base just outside of Las Vegas, brings together the U.S. Air Force and aircraft and crews from its allies around the world for two weeks of training that is as intense and demanding as actual combat. Red Flag: Air Combat for the 21st Century offers a complete history and an unprecedented insider's view of the fully integrated, war-conditions exercise that uses the largest combat range on the planet—the size of Connecticut—and involves every kind of military aircraft and asset, from fighters, tankers, and bombers to helicopters, satellites, and unmanned aircraft. With dynamic photos and firsthand description, the book also gives readers a close-up look at the modern and upgraded version of Red Flag—Joint Red Flag, an all-new exercise integrating live and virtual elements in a seamless campaign that challenges warfighters and tests command and control procedures, processes, and architecture.

*The Tornado Years* David Herriot 2020-02-19 "Brings us into the back seat of these remarkable British aircraft and provides insights unavailable until now . . . a true gem." —The Aviationist Following the success of *The Adventures of a Cold War Fast-Jet Navigator: The Buccaneer Years*, which won the Aviation Enthusiasts' Book Club's coveted "Book of the Year" award in 2018, Wing Commander David Herriot now explores that part of his RAF service which was intimately linked to the Panavia Tornado. Qualified as a weapons instructor, and acknowledged as a skilled tactician and weapons expert, Herriot soon rose to the top on his first tour on Tornado. Subsequent promotions in rank found him with responsibility for all aspects of weapon delivery, and the formulation of tactics, for the four Tornado squadrons based at RAF Brüggen in Germany. Later, in Whitehall, his career changed to that of a Ministry of Defence staff officer, assigned with the development of the weapons requirements for all air-to-surface delivery platforms in the RAF, but particularly Tornado. There followed a wartime deployment as the "Boss" of an RAF support unit in Italy, for a squadron of Jaguars deployed on NATO operations in Kosovo, before his next appointment took him to the RAF College where he was, as the commanding officer of Cadet Wing, responsible for the training and guidance of the future officer corps of the RAF. This is another epic adventure for the military aviation enthusiast, particularly those with affection for the Panavia Tornado. Herriot's open and easy style has been commended highly previously. He does not let his readers down with this one. This is a story well worth reading.

Britain's Cold War Bombers Tim McLelland 2017-05-17 *Britain's Cold War Bombers* explores the creation and development of the jet bomber, tracing the emergence of the first jet designs (the Valiant and Vulcan) through to the first-generation jets which entered service with the R.A.F. and Fleet Air Arm. Each aircraft type will be examined, looking at how the design was created and how this translated into an operational aircraft. The basic development and service history of each type will be examined, with a narrative which links the linear appearance of each new design, leading to the present day and the latest generation of Typhoon aircraft. Other aircraft types explored will include the Canberra, Sperrin, Victor, Scimitar, Buccaneer, Nimrod, Phantom, Sea Harrier, Jaguar, Tornado GR1/4 and Typhoon. Interoperability of U.S. and NATO Allied Air Forces Eric Victor Larson 2003 The United States conducts air operations with other willing NATO allies, including non-NATO members. The objective of this background research for a larger RAND study, *Interoperability: A Continuing Challenge in Coalition Air Operations*, is twofold: (1) to help the U.S. Air Force identify potential interoperability problems that may arise in coalition air operations involving the United States and its NATO allies, as well as non-NATO countries, over the next decade and (2) to suggest solution directions to mitigate those problems. The study focus is on command, control, communications, intelligence, surveillance, and reconnaissance (C3ISR) systems and out-of-NATO-area operations. The authors present a data-based historical overview of the U.S. experience in coalition operations with NATO allies up to 1999 and seek to provide a deeper understanding of interoperability through the answers to several key questions: For what missions is interoperability required? With which NATO allies is interoperability required? For what capabilities and services is interoperability required? Detailed case-study analyses of coalition operations in Southwest Asia, Bosnia, Somalia, and Rwanda identify key interoperability challenges and workarounds (short-term solutions) at the strategic, operational, tactical, and technological levels, and provide relevant lessons for meeting these challenges and improving the interoperability of U.S. and NATO air and C3ISR capabilities.

*Desert Storm 1991* Richard P. Hallion 2022-02-17 An expertly written, illustrated new analysis of the Desert Storm air campaign fought against Saddam Hussein's Iraq, which shattered the world's fourth-largest army and sixth-largest air force in just 39 days, and revolutionized the world's ideas about modern air power. Operation Desert Storm took just over six weeks to destroy Saddam Hussein's war machine: a 39-day air campaign followed by a four-day ground assault. It shattered what had been the world's fourth-largest army and sixth-largest air force, and overturned conventional military assumptions about the effectiveness and value of air power. In this book, Richard P. Hallion, one of the world's foremost experts on air warfare, explains why Desert Storm was a revolutionary victory, a war won with no single climatic battle. Instead, victory came thanks largely to a rigorously planned air campaign. It began with an opening night that smashed Iraq's advanced air defense system, and allowed systematic follow-on strikes to savage its military infrastructure and field capabilities. When the Coalition tanks finally rolled into Iraq, it was less an assault than an occupation. The rapid victory in Desert Storm, which surprised many observers, led to widespread military reform as the world saw the new capabilities of precision air power, and it ushered in today's era of high-tech air warfare.

**Tornado F3 in Focus** David Gledhill 2017-05-17 The Tornado F2 had a troubled introduction to service. Unwanted by its crews and procured as a political imperative, it was blighted by failures in the acquisition system. It was adapted from a multi-national design, planned by committee, and developed to counter a threat which disappeared. Modified rapidly before it could be sent to war, the Tornado F3 eventually matured into a capable weapons system, but despite datalinks and new air-to-air weapons, its poor reputation sealed its fate. David Gledhill, a former Tornado F3 navigator, tells the story from an insider's perspective of the early days as one of the first instructors on the Operational Conversion Unit, through the aircraft's development and operational testing, to its demise. He reflects on the aircraft's capabilities and deficiencies, and analyses why it was mostly under-estimated by opponents. Although many books have already described the Tornado F3 in detail, Gledhill's involvement in its development provides a unique insight into this complex and misunderstood aircraft programme, dispelling some of the myths that have dogged its reputation for decades. This is Gledhill's third book, and like the others, it captures the story in pictures taken in the cockpit and around the squadron. Illustrations: 123 b/w and 62 colour photographs

*Tornado Over the Tigris* Michael Napier 2015-07-31 Written from the unique perspective of a fast jet cockpit, *Tornado Over the Tigris* captures the essence of what it was really like to fly a Tornado at the front-line of the Cold War in Germany and on operations over Iraq in the aftermath of the Gulf War. After achieving a boyhood ambition to qualify as an RAF pilot, Michael Napier was posted to RAF Bruggen in Germany where he spent five years flying Tornado GR1 strike/attack aircraft at the height of the Cold War. Always exhilarating, sometimes amusing and often dangerous, Michael Napier's Tornado flying ranged from 'routine' low-flying in continental Europe and the UK, to air combat manoeuvring in Sardinia and the ultra-realistic Red Flag exercises in the USA. Progressing from struggling first-tourist to respected four-ship leader, he then became an instructor at the Tactical Weapons Unit at RAF Chivenor. This tour, during which he flew the Hawk, provided yet more exciting and challenging flying. He returned to the Tornado at Bruggen as a Flight Commander shortly after the Gulf War and subsequently flew a number of operational sorties over Iraq, which included leading air-strikes against Iraqi air defence installations as part of major Coalition operations. This is his story,

told with ease and great style. It is sure to inspire a fresh generation of fast jet pilots as they strive to make their own marks in this field.

**The Desert Air Force in World War II** Ken Delve 2017-03-31 This is a comprehensive reference to the structure, operation, aircraft and men of the 1st Tactical Air Force, or Desert Air Force as it became known. It was formed in North Africa to support the 8th Army and included squadrons from the RAF, SAAF, RAAF and eventually the USAAF. The book includes descriptions of many notable defensive and offensive campaigns, the many types of aircraft used, weapons and the airfields that played host to these events. The five main sections of the book include a general historical introduction and overview, operations, operational groups, aircrew training and technical details of each aircraft type. Lengthy annexes cover personnel, the squadrons in World War II, accuracy of attacks, orders of battle for each wartime year, maps of airfield locations and numbers of enemy aircraft downed.

**Blue Diamonds** Michael Napier 2015-01-15 æIn the seven decades since the Second World War, 14 Squadron has operated a wide array of aircraft types (Mosquitoes, Vampires, Venoms, Hunters, Canberras, Phantoms, Jaguars and Tornados) in a fascinating variety of roles. For much of this time, the Squadron was based in Germany at the front line of the Cold War, but it also participated in the Gulf War in 1991, in operations over Iraq from 1991-2009, in the Kosovo conflict in 2000 and latterly during the war in Afghanistan, firstly with the Tornado GR4 and then with the Shadow R1. Today the Squadron operates in great secrecy in an Intelligence, Surveillance, Target Acquisition and Reconnaissance role.æ Having had access to log-books, contemporary diaries, maps and photographs, as well as oral and written accounts from a large number of ex-Squadron members, the author has been able to produce as complete an account as is presently possible of the operational history of 14 Squadron in the second half of the twentieth century and the opening years of the twenty-first.

**Eject! Eject!** John Nichol 2023-05-25 'Eject! Eject!' When the call is made to abandon an aircraft, it's only the beginning of the story... From the Sunday Times bestselling writer John Nichol, author of Spitfire, Lancaster and Tornado, comes a brilliant new book that reveals the astonishing story of an invention that has saved many thousands of lives around the world, including his own: the ejection seat. Nichol tells the remarkable tale of how the ejection seat was first conceived during the Second World War as countless lives were lost in accidents and in battle. In the wake of the war, that technological race to save aircrew lives using explosive seats continued at an incredible pace. Nichol tells the story of the brave men who risked their lives testing those early devices, and interviewed the first British pilot to eject back in 1949, when ejection, from pulling the handle to being under the parachute, took thirty seconds. Today, that figure is down to around one second. Packed with interviews with aircrew who know exactly how it feels to 'Bang Out' from an aircraft at high speed, both in peace and in war, the book gives the reader a vivid sense of what that life-saving experience feels like, but also features the moving accounts of what happens next, from the viewpoint of both the crews and their families, who often have little or no information about whether or not their loved ones have survived. Because ejecting is just the start of a journey..... Packed with dramatic action, incredible science and moving recollections, Eject! Eject! is an essential read.

**The Battle of Britain Memorial Flight** Jarrod Cotter 2007-01-01 The history of the Flight began with the formation of the Historic Aircraft Flight in July 1957, it was later to become known as The Battle of Britain Memorial Flight. Countless displays and fly-pasts have enthralled audiences and enthusiasts all over Britain and in many parts of Europe, when the traditional Avro Lancaster, Spitfire and Hurricane can be seen in their wartime colors and the growl of all six Merlin engines stirs many nostalgic memories. This book is written with the wholehearted support of the Flight's Commanding Officer and the author has access to archive material. The book includes a Foreword from the OC BBMF, a complete history of the unit, chapters on each of the types operated, including the DC-3 Dakota and de Havilland Chipmunk and present-day operations. Photos include superb images from the BBMF archives, the author's collection that includes historic black and white shots from the early days, air-to-air color, personalities and behind-the-scenes images. This is the ultimate souvenir of the celebration of the BBMF's 50th Anniversary. REVIEWS "...clearly the definitive history of this unit. It is a very easy and enjoyable read that is more than just a history of the Flight's activities. It is a history of "a national tribute to all who have served, and continue to continue to serve" Air Power History Spring 2009

**Tornado GR1** Michael Napier 2017-06-30 Replacing the Vulcan, Buccaneer and Jaguar in the front line of the Cold War, the remarkable swing-winged Tornado GR1 provided Britain's strike capability in the last years of the Cold War in the 1980s, equipping some 10 RAF squadrons. During the Gulf War, Tornado GR1 crews led Britain's contribution to Coalition operations against Iraq, and in the subsequent years Tornado GR1s were involved almost continuously in operations over Iraq. In 1999 the Tornado GR1 force carried out offensive missions over Kosovo as part of NATO operations in the Balkans. The Tornado GR1s Terrain Following Radar gave the aircraft a unique capability: it was the first RAF aircraft to have the ability to operate at low-level at night and in all-weather. The incredible flexibility of both the aircraft and its crews was demonstrated by the successful switch to medium-level operations using laser-guided weapons after the Cold War. Produced in the same style format as Javelin: An Operational History (which approaches the subject from the perspective of the RAF squadrons which operated the aircraft), Tornado GR1: An Operational History describes in detail the accomplishments and day-to-day workings of the operational RAF Tornado GR1 units in the UK, Germany, the Middle East and across the globe. The book is underpinned by research from original official documents, augmented by the personal accounts by Tornado air- and ground-crews. It is richly illustrated throughout with photographs of the aircraft.

**Tornado Boys** Ian Hall 2016-08-05 The RAF veteran and author of Fast Jets and Other Beasts shares stories from the men and women who have flown the combat aircraft. With the introduction of female pilots to the RAF in 1994, the Tornado was the first aircraft to be flown by both men and women. Another aspect distinguishing this book from the rest of the series is that it covers an aircraft which is still in active service, especially as a key player in current Middle East operations. With focus on the GR1/GR4 versions of the Tornado, readers will get to see what it is like to operate this bomber/reconnaissance aircraft against the backdrop of modern-day scenarios. The book begins in the 1970s with stories from operators and ground crew using the Tornado as a Cold War nuclear deterrent, and continues with tales of later "hot" wars as in both Gulf conflicts and in Kosovo. There are also stories of Scud hunting in Iraq and Red Flag exercises in the United States, as well as of a stunning competition victory over the USAF's Strategic Air Command in their own backyard. The short-lived anti-shiping role is not neglected. With the transformation of the Tornado to the GR4 standard, the book continues with chapters covering active service supporting Britain's increasingly complex international commitments and the employment of new weaponry and sensors. All in all, through the eyes of men and women who have operated this extraordinary aircraft, the volume presents an entertaining and illuminating series of tales and anecdotes. These light and informative stories come from those who were proud to serve on and loved to operate the impressively versatile Tornado.

**Operation Desert Storm** Kwai-Cheung Chan 1998-03 This is the unclassified version of a classified report; 85% of the original classified material is presented in this report. Addresses: the use and performance of aircraft, munitions, and missiles employed during the air campaign; the validity of DoD and manufacturer claims about weapon systems' performance, particularly those systems utilizing advanced technology; the relationship between cost and performance of weapon systems; and the extent that air campaign objectives were met. Discusses: LGB accuracy, F-117 and TLAM effectiveness, IADS capabilities, target sensor technologies, combat support platforms, and more.

**A Detailed History of RAF Manston 1945-1999** Joe Bamford 2020-05-29 Having been classified by the Air Ministry as a 'Master Diversion' airfield, RAF Manston was for many years open twenty-four hours a day and available to both civil and military aircraft 365 days a year. It was also later equipped with the Pyrene foam system, which both civil and military aircraft could use when they had problems with their undercarriage: there is no doubt that the foam carpet saved many lives. The most spectacular occasion that it was used was on 20 April 1967 when a British Eagle Britannia made a complete wheels-up landing. It is claimed that Manston was the only station to serve in every command of the RAF and until its closure in 1999; it probably dealt with more diverse types of aircraft than any other station. During its eighty-three years as a Royal

Naval/ RAF airfield, it played host to the Sopwith Camel, Spitfire, Bf 109, He 111, B-29, B-47, Tu-104, F-84 and Concorde, plus many other types that are too numerous to mention.

**RAF Leconfield - a pictorial history 1937-2015** Mary Foster 2016-08-24 R.A.F. Leconfield was an integral part of the village and St. Catherine's church for nearly 40 years until it was handed over to the Army and became Normandy Barracks and the Joint Services Driving School in 1976. E Flight 202 Squadron search and rescue helicopters continued to fly from Leconfield until it too was disbanded in 2015. The book is a pictorial overview of all the Squadrons that served at R.A.F. Leconfield from peace time in 1937 to the Battle of Britain, Bomber Command to the cold war and beyond and the heroism of the men who served. It is comprised of photos from squadron websites and personal photos from those who served there. It was compiled to celebrate the Station's long association with St.Catherine's church and the dedication of a new R.A.F. chapel and altar by the Right Reverend Richard Frith, Bishop of Hull, in 2012.

**Seek and Strike** Nigel Walpole 2020-05-30 Seek and Strike - RAF Brüggen in War and Peace is an anecdotal history of the largest RAF station in Germany. Optimized for a new breed of aircraft, and to NATO requirements, this huge airfield was cut out of the Elmpt Forest, on the German border with Holland, and completed in one year to become operational in 1953. First occupied by a fighter wing equipped with Vampires, Sabres and Hunters, its 'Seek and Strike' motif took on real meaning when the station re-equipped with strike, attack and reconnaissance Canberras, followed by strike/attack Phantoms, Jaguars and finally Tornados. RAF Brüggen was at the forefront of the Cold War, during which innovation and determination brought it many accolades. It further distinguished itself in the Gulf War and continued to play its part in subsequent monitoring operations in that theater; it was also the only Tornado Wing to operate directly from its home base during the Kosovo campaign. This is the story of a station at war, of the men and women at the sharp end and in support. At work and play, it was they who made Brüggen what it was, excelling in all things and justifying a claim to have been RAF Germany's 'jewel in the crown'. With its closure in 2001, the RAF relinquished its last main operating base outside the UK. Brüggen was indeed 'last and best'.

*The Royal Air Force* Michael Napier 2018-02-20 A fully illustrated history of the Royal Air Force while on operations, publishing to mark the centenary of its foundation in World War I.

**Tornado Down** John Nichol 2022-07-19 In 1918, the RAF was established as the world's first independent air force. To mark the 100th anniversary of its creation, Penguin are publishing the Centenary Collection, a series of six classic books highlighting the skill, heroism esprit de corps that have characterised the Royal Air Force throughout its first century. RAF Flight Lieutenants John Peters and John Nichol were shot down over enemy territory on their first mission of the Gulf War. Their capture in the desert, half a mile from their blazing Tornado bomber, began a nightmare seven-week ordeal of torture and interrogation which brought both men close to death. In Tornado Down, John Peters and John Nichol tell the incredible story of their part in the war against Saddam Hussien's regime. It is a brave and shocking and totally honest story: a story about war and its effects on the hearts and minds of men. The Centenary Collection: 1. The Last Enemy by Richard Hillary 2. Tumult in the Clouds by James Goodson 3. Going Solo by Roald Dahl 4. First Light by Geoffrey Wellum 5. Tornado Down by John Peters & John Nichol 6. Immediate Response by Mark Hammond

*The Handbook of European Defence Policies and Armed Forces* Hugo Meijer 2018 This volume provides the first geographically and thematically comprehensive study of the evolution and current state of the national security and defence policies, strategies, doctrines, capabilities, and military operations, as well as the alliances and security partnerships, of European armed forces.

*From Lightnings to MiGs* Russ Peart 2021-10-30 It was supposed to be just a training flight. The two Soviet-manufactured MiG 21s, each with two practice bombs and four air-to-ground rockets, were lined up on the runway in Bangladesh at the height of the Cold War, when air traffic control suddenly reported an incursion by Indian Air Force Jaguars. Though ill-equipped for combat, the two MiGs were scrambled. One of the MiGs' pilots was an RAF officer - Squadron Leader Russell Peart. On a seven-month loan to the Bangladeshi Air Force, Peart suddenly found himself at the centre of the simmering hostility between two neighbouring nations. By the time they reached the area that had been threatened by the Indian pilots, the Jaguars had gone. Later, when Squadron Leader Russell Peart spoke of the incident to the British High Commissioner, he was told not to shoot down any Jaguars as the Indians had still not paid for them! Russell Peart flew many other aircraft in his varied career, including the MiG 19, and while a test pilot at Boscombe Down trialed such designs as the Tornado GR1. But it was whilst he was seconded to the Sultan of Oman's Air Force, particularly during the so-called 'Secret War' in Dhofar, that he saw the most action. In that theatre the author flew some 200 operational sorties, 180 of which involved live fire, during which he was hit many times. He was also hit and wounded by a 75mm shell. Russ Peart has written in detail of his exciting RAF career, from flying Lightnings in the Far East to winning the top prize in the International Tactical Bombing Competition against a handpicked team of United States Air Force fighter pilots and being awarded the Sultan Of Oman's Distinguished Service Medal. Supplemented by a selection of previously unseen photographs, this uniquely original memoir throws new light on the operational flying undertaken by some RAF pilots during the tense years of the Cold War.
