Physical Activity and Educational Achievement Romain Meeusen 2017-08-07 A growing body of research evidence suggests that physical activity can have a positive effect on educational achievement. This book examines a range of processes associated with physical activity that are of relevance to those working in education - including cognition, learning, memory, attention, mood, stress and mental health symptoms - and draws on the latest insights from exercise neuroscience to help explain the evidence. With contributions from leading scientists and educationalists from around the world, this book cuts through the myths to interrogate the relationship between physical activity and educational achievement in children, adolescents and young adults in a variety of cultural and geographical contexts. Examining both the benefits and risks associated with physical activity from the perspectives of exercise science and educational psychology, it also looks ahead to ask what the limits of this research might be and what effects it might have on the future practice of education. Physical Activity and Educational Achievement: Insights from Exercise Neuroscience is fascinating reading for any student, academic or practitioner with an interest in exercise science and education.

Children's Games in Street and Playground Iona Archibald Opie 2008 Perhaps this book should come with a warning to parents: within these pages, children deliberately scare each other, ritually hurt each other, take foolish risks, promote fights, and play ten against one. And yet throughout, they consistently observe their own sense of fair play.'During the past fifty years, shelf-loads of books have been written instructing children in the games they ought to play -- and some even instructing adults on how to instruct children in the games they ought to play -- but few attempts have been made to record the games children in fact play.'This was Iona and Peter Opie's pertinent observation in 1969, and it was this gap that they sought to fill with their exhaustive survey, through the 1960s, of the games that children 'in fact play' aged roughly between six and twelve years of age, and when outdoors -- and usually out of sight.The Opies weren't interested in formal games and sports supervised by parents or teachers. What excited them were the rough-and-tumble games for which, as one child described, 'nothing is needed but the players themselves.' They were also anxious that, in their meticulous recording of the games, the spirit of the play, the zest, variety and disorderliness, should not be lost.The result was their classic work Children's Games in Street and Playground. To aid a clear and lively presentation of their remarkable study, the original single book has been divided into two. Both volumes record games played in the street, park, playground and wasteland of more than 10,000 children from the Shetland Isles to the Channel Islands, although the majority of the information comes from children living in big cities such as London, Liverpool, Bristol and Glasgow.This second volume focuses on games involving seeking, hunting, racing, duelling, exerting, daring, guessing, acting and pretending. More than 85 games are described in detail including the rhymes and saying children repeat while playing them, together with the different names under which they are played. Brief historical notes are also included where relevant.The children of the 1960s, the Opies noted, are often thought 'to be incapable of self-organization, and to have become addicted to spectator amusements.' to the extent that adults must be relied on to provide play materials, ideas and time to play with them. The same attitudes are still widespread today with our concerns about television and computer games, and the middle-class parental impulse to fill our children's days with organised classes and play dates. 'However much children may need looking after, they are also people going about their own business within their own society.' There are important lessons to be learned from this book about giving children the time and physical space to be themselves with other children.

Visual Perception Lothar Spillmann 2012-12-02 This book presents an interdisciplinary overview of the main facts and theories that guide contemporary research on visual perception. While the chapters cover virtually all areas of visual science, from philosophical foundations to computational algorithms, and from photoreceptor processes to neuronal networks, no attempt has been made to provide an exhaustive treatment of these topics. Rather, researchers from such diverse disciplines as psychology, neurophysiology, anatomy, and clinical vision sciences have worked together to review some of the most important correlations between perceptual phenomena and the underlying neurophysiological processes and mechanisms. The book is thus intended to serve as an advanced text for graduate students and as a guide for all vision researchers to understanding current progress outside their specialized fields of interest. ï Examines parallel processing of visual information ï Discusses links between physiologically-measured receptive fields and psychophysically-measured perceptive fields ï Presents a spatial sampling by the retina and cortical modules ï Covers signal transduction and the sites of adaptation ï Describes a single-cell analysis of attention ï Discusses computational models of vision

A Music Learning Theory for Newborn and Young Children Edwin Gordon 2003 Music Learning Theory for Newborn and Young Children (2003 Edition) treats the most critical learning period in every individual's musical life: birth to age five. Written for parents and early childhood music teachers, this latest revision is the most authoritative of its kind by the man many consider the leading educator and researcher in music education. Professor Gordon shares insights and research from almost twenty-five years of guiding young children in music learning.

Models-based Practice in Physical Education Ashley Casey 2020-12-14 This book offers a comprehensive synthesis of over 40 years of research on models in physical education to suggest Models-based Practice (MbP) as an innovative future approach to physical education. It lays out the ideal conditions for MbP to flourish by situating pedagogical models at the core of physical education programs and allowing space for local agency and the co-construction of practice. Starting from the premise that true MbP does not yet exist, the book makes a case for the term "pedagogical model" over alternatives such as curriculum model and instructional model, and explains how learners' cognitive, social, affective and psychomotor needs should be organised in ways that are distinctive and unique to each model. It examines the core principles underpinning the pedagogical models that make up MbP, including pedagogical models as organising centres for program design and as design specifications for developing local programs. The book also explores how a common structure can be applied to analyse pedagogical models at macro, meso and micro levels of discourse. Having created a language through which to talk about pedagogical models and MbP, the book concludes by identifying the conditions - some existing and some aspirational - under which MbP can prosper in reforming physical education. An essential read for academics, doctoral and post-graduate students, and pre-service and in-service teachers, Models-based Practice in Physical Education is a vital point of reference for anyone who is interested in pedagogical models and wants to embrace this potential future of physical education.

Handbook of Embodied Cognition and Sport Psychology Massimiliano L. Cappuccio 2019-01-01 The first systematic collaboration between cognitive scientists and sports psychologists considers the mind-body relationship from the perspective of athletic skill and sports practice. This landmark work is the first systematic collaboration between cognitive scientists and sports psychologists that considers the mind-body relationship from the perspective of athletic skill and sports practice. With twenty-six chapters by leading researchers, the book connects and integrates findings from fields that range from philosophy of mind to sociology of sports. The chapters show not only that sports can tell scientists how the human mind works but also that the scientific study of the human mind can help athletes succeed. Sports psychology research has always focused on the themes, notions, and models of embodied cognition; embodied cognition, in turn, has found striking confirmation of its theoretical claims in the psychological accounts of sports performance and athletic skill. Athletic skill is a legitimate form of intelligence, involving cognitive faculties no less sophisticated and complex than those required by mathematical problem solving. After presenting the key concepts

necessary for applying embodied cognition to sports psychology, the book discusses skill disruption (the tendency to “choke” under pressure); sensorimotor skill acquisition and how training correlates to the development of cognitive faculties; the intersubjective and social dimension of sports skills, seen in team sports; sports practice in cultural and societal contexts; the notion of “affordance” and its significance for ecological psychology and embodied cognition theory; and the mind's predictive capabilities, which enable anticipation, creativity, improvisation, and imagination in sports performance. Il mini sport nei giochi di rimando Valentina Biino 2020-08-12T00:00:00+02:00 Il livello di capacità coordinative di ciascuno dipende in modo decisivo dallo sviluppo motorio nei primi anni di vita: se un bambino comincia a praticare correttamente lo sport in forma multilaterale e adeguata al suo sviluppo fisico, sarà sempre pronto successivamente a svolgere bene qualsiasi altra attività motoria. Da qui deriva l'opportunità di aprire le attività sportive alle sezioni mini degli sport individuali e di squadra, ovvero una concreta possibilità di praticare lo sport, lo stesso dei grandi, anche da bambini. Questo volume si concentra sulle basi dell'apprendimento motorio fornendo un quadro di riferimento sugli sport di rimando e sulla pratica di avviamento al minitennis. Descritte le caratteristiche del bambino in età prescolare, sono illustrate le varie proposte ludiche e sono suggerite le metodologie di insegnamento e le procedure didattiche operative. La sezione descrittiva degli esercizi e dei giochi è arricchita da illustrazioni e disegni che permettono un'immediata comprensione dell'attività. Il testo costituisce non solo uno strumento didattico per gli studenti universitari delle Facoltà di scienze motorie e sportive, ma anche una guida utile per chi, tecnico sportivo o istruttore di minisport, intraprenda un'attività motoria con i bambini nella prima infanzia o nell'età evolutiva.

Cognitive and Working Memory Training Jared M. Novick 2019-11-04 Cognitive and Working Memory Training assembles an interdisciplinary group of distinguished authors--all experts in the field--who have been testing the efficacy of cognitive and working memory training using a combination of behavioral, neuroimaging, meta-analytic, and computational modelling methods. This edited volume is a defining resource on the practicality and utility of the field of cognitive training research in general, and working memory training in particular. Importantly, one focus of the book is on the notion of transfer--namely, the extent to which cognitive training--be it through music, video-game play, or working memory demanding interventions at school--generalizes to learning and performance measures that were decidedly not part of the training regimen. As most cognitive scientists (and perhaps many casual observers) recognize, the notions of cognitive training and transfer have been widely controversial for many reasons, including disagreement over the reliability of outcomes and consensus on methodological "best practices," and even the ecological validity of laboratory-based tests. This collection does not resolve these debates of course; but its contribution is to address them directly by creating an exchange in a single compendium among scientists who, in separate research publications, do not always reach the same conclusions. The book is organized around comprehensive overview chapters from different disciplinary perspectives--Cognitive Psychology (by Hicks and Engle), Neuroscience (by Kuchinsky and Haarmann), and Development (by Ling and Diamond)--that define major issues, terms, and themes in the field, with a pointed set of challenge questions to which other scientists respond in subsequent chapters. The goal of this volume is to educate. It is designed for students and researchers, and perhaps the armchair psychologist. Crucially, the contributors recognize that it is good for science to persistently confront our understanding of an area: Debate and alternative viewpoints, backed by theory, data, and inferences drawn from the evidence, is what advances scientific knowledge. This book probes established paradigms in cognitive training research, and the long-form of these chapters (not found in scientific journals) allows detailed exploration of the current state of the science. Such breadth intends to invite novel ways of thinking about the nature of cognitive and perceptual plasticity, which may enlighten either new efforts at training, new inferences about prior results, or both.

World-wide survey of school physical education UNESCO 2014-09-01 This joint UNESCO-NWCPEA Project comprised a World-wide physical education survey to inform the development of benchmark indicators on Quality Physical Education (QPE) in schools and Quality Physical Education Teacher Education/Training (QPETE/T) in provider institutions as well as principles of a physical education basic needs model. The survey adopted a multi-method/pluralistic approach to data generation from a range of sources including a specifically designed structured survey questionnaire translated into officially used UNESCO and several other languages seeking quantitative and qualitative data, as well as information derived from recent and current international, continental regional and national physical education-related studies.

Interdisciplinary Pediatric Palliative Care Joanne Wolfe 2022-01-11 Interdisciplinary Pediatric Palliative Care provides a uniquely integrated, comprehensive resource about palliative care for seriously ill children and their families. The field of palliative care is based on the fundamental principle that an interdisciplinary team is optimal in caring for patients and their families throughout the illness trajectory. The text integrates themes including goals of care, discipline-specific roles, cultural and spiritual considerations, evidence-based outcomes, and far more. It emphasizes the value of words and high-quality communication in palliative care. Importantly, content acknowledges challenging periods between team members, and how those can ultimately benefit team, patient, and family care outcomes. Each chapter includes the perspective of the family of a seriously ill child in the form of a vignette to promote care team understanding of this crucial perspective. This second edition is founded on a wealth of evidence that reflects the innovations in pediatric palliative care science over the past 10 years, including initiatives in clinical care, research, and education. Interdisciplinary Pediatric Palliative Care is appropriate for all pediatric palliative clinicians (PPC), including physicians, nurses, psychosocial clinicians, chaplains, and many others. All subspecialists who deliver care to seriously ill children, will find this book a must-have for their work. Advance Praise for Interdisciplinary Pediatric Palliative Care, Second Edition "This new edition is as much a testament to pediatric palliative care's remarkable evolution as a field as it is a quintessential playbook for providing the high-quality holistic and compassionate care that families with seriously ill children desperately want. Every page thoughtfully weaves together how interprofessional teams can contribute collaboratively to learning about and supporting the

preferences, needs and priorities of the precious patients and families in their circle of care. It is a must read for all practitioners to enhance their palliative care understanding, appreciation and ability as a foundation for optimizing quality of life in practice." - Rebecca Kirch, JD, Executive Vice President of Policy and Programs, National Patient Advocate Foundation "This book offers a truly contemporary and comprehensive view of the entire field of pediatric palliative care. The focus on social determinants of health, cultural humility, and disparities in care could not be timelier, and the section highlighting conflict and conflict resolution should be required reading. The continued and purposeful inclusion of interdisciplinary clinicians in producing each chapter models the palliative care team itself-an approach in which all voices are necessary as we seek to provide the most compassionate care possible." - Rachel Thienprayoon, MD, MSCS, FAAP, FAAHPM, Associate Professor of Anesthesia, Medical Director, StarShine Hospice and Palliative Care, Cincinnati Children's Hospital Medical Center

Employability & Competences Vanna Boffo 2018-03-31 The book is the final report of the researches, discussions, conversations around and about the Project PRIN Employability & Competences which took place on March 9th-11th, 2017 within an International Conference at the University of Florence. It was the final event of the project PRIN2012LATR9N which aims were: «to design innovative programs for higher education, to promote personalized and learner-centered teaching and learning, to build on job competencies, to value talents to create new work opportunities, to support young adults during their employment emergency, as a response to socio economic crisis and as a citizenship action». The research activities concerned the main phases of the students' academic life: career guidance upon entry, personalized teaching, career calling, professional vocation, profession building activities such as internships and work related experiences, and lastly job placement.

Art and Representation John Willats 1997 In *Art and Representation*, John Willats presents a radically new theory of pictures. To do this, he has developed a precise vocabulary for describing the representational systems in pictures: the ways in which artists, engineers, photographers, mapmakers, and children represent objects. His approach is derived from recent research in visual perception and artificial intelligence, and Willats begins by clarifying the key distinction between the marks in a picture and the features of the scene that these marks represent. The methods he uses are thus closer to those of a modern structural linguist or psycholinguist than to those of an art historian. Using over 150 illustrations, Willats analyzes the representational systems in pictures by artists from a wide variety of periods and cultures. He then relates these systems to the mental processes of picture production, and, displaying an impressive grasp of more than one scholarly discipline, shows how the Greek vase painters, Chinese painters, Giotto, icon painters, Picasso, Paul Klee, and David Hockney have put these systems to work. But this book is not only about what systems artists use but also about why artists from different periods and cultures have used such different systems, and why drawings by young children look so different from those by adults. Willats argues that the representational systems can serve many different functions beyond that of merely providing a convincing illusion. These include the use of anomalous pictorial devices such as inverted perspective, which may be used for expressive reasons or to distance the viewer from the depicted scene by drawing attention to the picture as a painted surface. Willats concludes that art historical changes, and the developmental changes in children's drawings, are not merely arbitrary, nor are they driven by evolutionary forces. Rather, they are determined by the different functions that the representational systems in pictures can serve. Like readers of Ernst Gombrich's famous *Art and Illusion* (still available from Princeton University Press), on which *Art and Representation* makes important theoretical advances, or Rudolf Arnheim's *Art and Visual Perception*, Willats's readers will find that they will never again return to their old ways of looking at pictures.

Semiotics in Mathematics Education Norma Presmeg 2016-04-11 This volume discusses semiotics in mathematics education as an activity with a formal sign system, in which each sign represents something else. Theories presented by Saussure, Peirce, Vygotsky and other writers on semiotics are summarized in their relevance to the teaching and learning of mathematics. The significance of signs for mathematics education lies in their ubiquitous use in every branch of mathematics. Such use involves seeing the general in the particular, a process that is not always clear to learners. Therefore, in several traditional frameworks, semiotics has the potential to serve as a powerful conceptual lens in investigating diverse topics in mathematics education research. Topics that are implicated include (but are not limited to): the birth of signs; embodiment, gestures and artifacts; segmentation and communicative fields; cultural mediation; social semiotics; linguistic theories; chains of signification; semiotic bundles; relationships among various sign systems; intersubjectivity; diagrammatic and inferential reasoning; and semiotics as the focus of innovative learning and teaching materials.

Cultures of Infancy Heidi Keller 2013-05-13 *Cultures of Infancy* presents the first systematic analysis of culturally informed developmental pathways, synthesizing evolutionary and cultural psychological perspectives for a broader understanding of human development. In this compelling book, author Heidi Keller utilizes ethnographic reports, as well as quantitative and qualitative analyses, to illustrate how humans resolve universal developmental tasks in particular sociodemographic contexts. These contexts are represented in cultural models, and three distinct models are addressed throughout the text: the model of independence with autonomy as developmental organizer; the model of interdependence with relatedness as the developmental organizer; and the model of autonomous relatedness representing particular mixtures of autonomy and relatedness. The book offers an empirical examination of the first integrative developmental task-relationship formation during the early months of life. Keller shows that early parenting experiences shape the basic foundation of the self within particular models of parenting that are influenced by culturally informed socialization goals. With distinct patterns of results the studies have revealed, *Cultures of Infancy* will help redefine developmental psychology as part of a culturally informed science based on evolutionary ground work. Scholars interested in a broad perspective on human development and culture will benefit from this pioneering volume.

Global Action Plan on Physical Activity 2018-2030 World Health Organization 2019-01-21 Regular physical activity is proven to help prevent and treat noncommunicable diseases (NCDs) such as heart disease stroke diabetes and breast and colon cancer. It also helps to prevent hypertension overweight and obesity and can improve mental health quality of life and well-being. In addition to the multiple health benefits of physical activity societies that are more active can generate additional returns on investment including a reduced use of fossil fuels cleaner air and less congested safer roads. These outcomes are interconnected with achieving the shared goals political priorities and ambition of the Sustainable Development Agenda 2030. The new WHO global action plan to promote physical activity responds to the requests by countries for updated guidance and a framework of effective and feasible policy actions to increase physical activity at all levels. It also responds to requests for global leadership and stronger regional and national coordination and the need for a whole-of-society response to achieve a paradigm shift in both supporting and valuing all people being regularly active according to ability and across the life course. The action plan was developed through a worldwide consultation process involving governments and key stakeholders across multiple sectors including health sports transport urban design civil society academia and the private sector.

Young Children's Cognitive Development Wolfgang Schneider 2014-04-04 A critical part of early childhood development is the development of "theory of mind" (ToM), which is the ability to take the perspective of another person. The main purpose of this book is to discuss and integrate findings from prominent research areas in developmental psychology that are typically studied in isolation, but are clearly related. Two examples are whether executive functions represent a precursor of ToM or whether ToM understanding predicts the development of executive functions, and to what extent children's level of verbal ability and their working memory are important predictors of performance on both executive functioning and ToM tasks. The chapters in this book give a detailed account of the major outcomes of this research. First, the state of the art concerning current understanding of the relevant constructs (working memory, ToM, executive functioning) and their developmental changes is presented, followed by chapters that deal with interactions among the core concepts. Its main focus is on theoretically important relationships among determinants of young children's cognitive development--considered to be "hot" issues in contemporary developmental psychology. Based on presentations made at an international workshop, this book is divided into two parts. In the first part, five teams of researchers present theoretical analyses and overviews of empirical evidence regarding the core

constructs of memory, executive functions, and ToM. The next part deals with the interplay among the core concepts outlined in Part I with developmental trends in the interaction.

PAD #13 Marina Parente 2017-01-10 The issue, edited by Marina Parente and Carla Sedini, founder of D4T - Design for Territories Research Network of Politecnico di Milano, aims to contribute to this new field of study helping readers understand the design-led phenomenon, which involves the tangible resources of a territory (like monumental and landscape heritage) as well as the intangible ones (like cultural identity and people values). The main topic of this issue is: How could the design develop the local dimension enhancing and revitalizing the territory at the same time? Furthermore, with issue #13 we are opening a series with artists' images that will match the articles with a visual research connected to the proposed subject. Photographer Carla Sedini, co-editor with Marina Parente of this issue, gave us permission to publish a selection of images about "design that is not there", "design that may be" and "tacit design" within urban territories around the world. We hope that many creatives will interpret the "Suggestions for Design" launched here. The numerous contributors to this issue are: Miriam Bicocca; Letizia Bollini; Marco Borsotti & Sonia Pistidda; Raffaella Fagnoni & Silvia Pericu; Davide Fassi, Laura Galluzzo & Anna Linda De Rosa; Rosanna Gaddi; Helena Gentili & Daria Casciani; José Luis González Cabrero, Ana Margarita Avila Ochoa, Ana Calvera, Debora Giorgi, Yosser Halloul, Insaf Khaled & Rosa Povedano; Maria Antonietta Sbordone; Reham Mohsen & Andreas Sicklinger; Carla Sedini & Luca Fois.

Simplexity Alain Berthoz 2018-12-20 "Simplexity, as I understand it, is the range of solutions living organisms have found, despite the complexity of natural processes, to enable the brain to prepare an action and plan for the consequences of it. These solutions are simplifying principles that enable the processing of information or situations, by taking into account past experience and anticipating the future. They are neither caricatures, shortcuts, or summaries. They are new ways of asking questions, sometimes at the cost of occasional detours, in order to achieve faster, more elegant, more effective actions." A. B. As Alain Berthoz demonstrates in this profoundly original book, simplicity is never easy; it requires suppressing, selecting, connecting, thinking, in order to then act in the best way possible. And what if we, in turn, are inspired by the living world to process the complexity that surrounds us? Alain Berthoz is professor at the Collège de France where he is co-director of the Laboratoire de physiologie de la perception et de l'action. [Laboratory for the physiology of perception and action]. He is a member of the French Academy of Sciences, and is the author of *Le Sens du mouvement* [The Brain's Sense of Movement] and *La Décision* [Emotion and Reason].

The Hundred Languages of Children Carolyn P. Edwards 1993 The city-run early childhood program of Reggio Emilia, Italy, has become recognized and acclaimed as one of the best systems of education in the world. Over the past 30 years, educators there have evolved an innovative approach that fosters children's intellectual development through a systematic focus on symbolic representation. Young children are encouraged to explore their environment and express themselves through many "languages", or modes of expression, including words, movement, drawing, painting, sculpture, shadow play, collage and music.... This book brings together the reflections of the Italian educators who founded and developed the system, as well as North Americans who have observed and/or studied there. It is a comprehensive introduction covering history and philosophy, curriculum and methods of teaching, school and system organization, the use of space and physical environments, and adult professional roles. -Back cover.

The Case Against Adolescence Robert Epstein 2007 This groundbreaking book argues that adolescence is an unnecessary period of life that people are better off without. Robert Epstein, former editor-in-chief of "Psychology Today," shows that teen turmoil is caused by outmoded systems put into place a century ago which destroyed the continuum between childhood and adulthood. Where this continuum still exists in other countries, there is no adolescence. Isolated from adults, American teens learn everything they know from their media-dominated peers--"the last people on earth they should be learning from," says Epstein. Epstein explains that our teens are highly capable--in some ways more capable than adults--and argues strongly against "infantilizing" young people. We must rediscover "the adult in every teen," he says, by giving young people adult authority and responsibility as soon as they can demonstrate readiness. This landmark book will change the thinking about teens for decades to come.

Legacy, Sustainability and CSR at Mega Sport Events Pierre Lienhard 2014-07-05 The UEFA European Football Championship 2008™ (EURO 2008) was the largest sports event ever organized in Switzerland. The host nations Austria and Switzerland emphasized the sustainability of the event. Through their analysis the authors argue that well-known principles of sustainability and policy were not uniformly implemented for the EURO 2008. Nonetheless, this book shows how, in Switzerland, a legacy was created through the implementation of corporate governance and social responsibility policies by UEFA, the Swiss Government and the Swiss Football Association. This book offers an unprecedented resource for sports practitioners and researchers. It provides a wealth of data based on the study of existing scholarly literature, key strategic and conceptual documents as well as exclusive interviews with high-level executives involved in the organization of EURO 2008.
