Epistemology & Methodology III: Philosophy of Science and Technology Part I: Formal and Physical Sciences M. Bunge 2012-12-06 The aims of this Introduction are to characterize the philosophy of science and technology, henceforth PS & T, to locate it on the map of learning, and to propose criteria for evaluating work in this field. 1. THE CHASM BETWEEN S & T AND THE HUMANITIES It has become commonplace to note that contemporary culture is split into two unrelated fields: science and the rest, to deplore this split - and to do is some truth in the two cultures thesis, and even nothing about it. There greater truth in the statement that there are literally thousands of fields of knowledge, each of them cultivated by specialists who are in most cases indifferent to what happens in the other fields. But it is equally true that all fields of knowledge are united, though in some cases by weak links, forming the system of human knowledge. Because of these links, what advances, remains stagnant, or declines, is the entire system of S & T. Throughout this book we shall distinguish the main fields of scientific and technological knowledge while at the same time noting the links that unite them.

Social Science Under Debate Mario Bunge 1999-01-01 Bunge contends that social science research has fallen prey to a postmodern fascination with irrationalism and relativism. He urges social scientists to re-examine the philosophy and the methodology at the base of their discipline.

**Computing Nature** Gordana Dodig-Crnkovic 2013-03-21 This book is about nature considered as the totality of physical existence, the universe, and our present day attempts to understand it. If we see the universe as a network of networks of computational processes at many different levels of organization, what can we learn about physics, biology, cognition, social systems, and ecology expressed through interacting networks of elementary particles, atoms, molecules, cells, (and especially neurons when it comes to understanding of cognition and intelligence), organs, organisms and their ecologies? Regarding our computational models of natural phenomena Feynman famously wondered: "Why should it take an infinite amount of logic to figure out what one tiny piece of space/time is going to do?" Phenomena themselves occur so quickly and automatically in nature. Can we learn how to harness nature's computational power as we harness its energy and materials? This volume includes a selection of contributions from the Symposium on Natural Computing/Unconventional Computing and Its Philosophical Significance, organized during the AISB/IACAP World Congress 2012, held in Birmingham, UK, on July 2-6, on the occasion of the centenary of Alan Turing's birth. In this book, leading researchers investigated questions of computing nature by exploring various facets of computation as we find it in nature: relationships between different levels of computation, cognition with learning and intelligence, mathematical background, relationships to classical Turing computation and Turing's ideas about computing nature - unorganized machines and morphogenesis. It addresses questions of information, representation and computation, interaction as communication, concurrency and agent models; in short this book presents natural computing and unconventional computing as extension of the idea of computation as symbol manipulation.

*Understanding Philosophy of Science* James Ladyman 2012-08-06 Few can imagine a world without telephones or televisions; many depend on computers and the Internet as part of daily life. Without scientific theory, these developments would not have been possible. In this exceptionally clear and engaging introduction to philosophy of science, James Ladyman explores the philosophical questions that arise when we reflect on the nature of the scientific method and the knowledge it produces. He discusses whether fundamental philosophical questions about knowledge and reality might be answered by science, and considers in detail the debate between realists and antirealists about the extent of scientific knowledge. Along the way, central topics in philosophy of science, such as the demarcation of science from non-science, induction, confirmation and falsification, the relationship between theory and observation and relativism are all addressed. Important and complex current debates over underdetermination, inference to the best explanation and the implications of radical theory change are clarified and clearly explained for those new to the subject.

Treatise on Basic Philosophy M. Bunge 2012-12-06 The purpose of this Introduction is to sketch our approach to the study of value, morality and action, and to show the place we assign it in the system of human knowledge. 1. VALUE, MORALITY AND ACTION: FACT, THEORY, AND METATHEORY We take it that all animals evaluate some things and some processes, and that some of them learn the social behavior patterns we call 'moral principles', and even act according to them at least some of the time. An animal incapable of evaluating anything would be very short-lived; and a social animal that did not observe the accepted social behavior patterns would be punished. These are facts about values, morals and behavior patterns: they are incorporated into the bodies of animals or the structure of social groups. We distinguish then the facts of valuation, morality and action from the study of such facts. This study can be scientific, philosophic or both. wayan animal evaluates environmental A zoologist may investigate the or internal stimuli; a social psychologist may examine the way children learn, or fail to learn, certain values and norms when placed in certain environments. And a philosopher may study such descriptive or explan atory studies, with a view to evaluating valuations, moral norms, or behavior patterns; he may analyze the very concepts of value, morals and action, as well as their cognates; or he may criticize or reconstruct value beliefs, moral norms and action plans.

**Mario Bunge: A Centenary Festschrift** Michael R. Matthews 2019-07-17 This volume has 41 chapters written to honor the 100th birthday of Mario Bunge. It celebrates the work of this influential Argentine/Canadian physicist and philosopher. Contributions show the value of Bunge's science-informed philosophy and his systematic approach to philosophical problems. The chapters explore the exceptionally wide spectrum of Bunge's contributions to: metaphysics, methodology and philosophy of science, philosophy of mathematics, philosophy of physics, philosophy of psychology, philosophy of social science, philosophy of biology, philosophy of technology, moral philosophy, social and political philosophy, medical philosophy, and education. The contributors include scholars from 16 countries. Bunge combines ontological realism with epistemological fallibilism. He believes that science provides the best and most warranted knowledge of the natural and social world, and that such knowledge is the only sound basis for moral decision making and social and political reform. Bunge argues for the unity of knowledge. In his eyes, science and philosophy constitute a fruitful and necessary partnership. Readers will discover the wisdom of this approach and will gain insight into the utility of cross-disciplinary scholarship. This anthology will appeal to researchers, students, and teachers in philosophy of science, social science, and liberal education programmes. 1. Introduction Section I. *Science, Philosophy and Sustainability* Angela Guimaraes Pereira 2015-02-27 For science to remain a legitimate and trustworthy source of knowledge, society will have to engage in the collective processes of knowledge co-production, which not only includes science, but also other types of knowledge. This process of change has to include a new commitment to knowledge creation and transmission and its role in a plural society. This book proposes to consider new ways in which science can be used to sustain our planet and enrich our lives. It helps to release and reactivate social responsibility within contemporary science and technology. It reviews critically relevant cases of contemporary scientific practice within the Cartesian paradigm, relabelled as 'innovation research', promoted as essential for the progress and well-being of humanity, and characterised by high capital investment, centralised control of funding and quality, exclusive expertise, and a reductionism that is philosophical as well as methodological. This is an accessible and relevant book for scholars in Science and Technology Studies, History and Philosophy of Science, and Science, Engineering and Technology Ethics. Providing an array of concrete examples, it supports scientists, engineers and technical experts, as well as policy-makers and other non-technical professionals working with science and technology to re-direct their approach to global problems, in a more integrative, self-reflective and humble direction.

**Das Theorie-Praxis-Problem der Betriebswirtschaftslehre** Fischer-Winkelmann Wolf F. 2013-03-08 In diesem Band sind die überarbeiteten Beiträge zum Rahmenthema "Praxisvollzug der Betriebswirtschaftslehre" der Tagung der Kommission "Wissenschaftstheorie im Verband der Hochschullehrer für Betriebswirtschaft e. V. " im Frühjahr 1992 zusammengefaßt. Die Tagung fand in den Räumen der Universität der Bundeswehr München mit über 50 Teilnehmern aus dem In- und Ausland statt. Es gilt leider auch heute, was wir vor 10 Jahren bezüglich des Bandes "Paradigmawechsel in der Betriebswirtschaftslehre?" in das Vorwort geschrieben haben: Aufgrund der sich im fachwissenschaftlichen Büchermarkt verstärkt fortsetzenden Konzentrationsbewegungen beläuft sich die Zahl der Verlage fast gegen Null, die noch der alten klassischen Verlegerphilosophie verhaftet sind, und nicht nur Lehrbuchseller zu verlegen trachten, sondern auch noch "sellerunverdächtige" Monographien oder Sammelbände wie dem vorliegenden. Aus diesem Grunde ist es mir als Tagungsleiter und Kommissionsvorsitzenden ein besonderes Bedürfnis, dem Gabler-Verlag dafür zu danken, daß er dieses Sammelwerk verlegt hat -wenn auch unter finanzieller Mithilfe der Autoren! Wer mit der Organisation von Publikationen von Sammelwerken selbst schon befaßt war, weiß auch die Mühen zu würdigen, die meine Mitarbeiter am irc Institut für Controlling, Frau MANDL und Herr MAIER, selbstlos auf sich genommen haben. Wer meint, daß im Zeitalter des desktop publishing, in dem die Verlage quasi nur noch die von den Autoren bzw. vom Team des Herausgebers selbst erstellten Vorlagen "kopieren" müssen, die Mühe der Koordinatoren und Herausgeber eines Bandes weniger geworden sei, der täuscht sich gewaltig.

**Modernity and the Ideals of Arab-Islamic and Western-Scientific Philosophy** A. Z. Obiedat 2022-07-08 This is the first study to compare the philosophical systems of secular scientific philosopher Mario Bunge (1919-2020), and Moroccan Islamic philosopher Taha Abd al-Rahman (b.1945). In their efforts to establish the philosophical underpinnings of an ideal modernity these two great thinkers speak to the same elements of the human condition, despite their opposing secular and religious worldviews. While the differences between Bunge's critical-realist epistemology and materialist ontology on the one hand, and Taha's spiritualist ontology and revelational-mystical epistemology on the other, are fundamental, there is remarkable common ground between their scientific and Islamic versions of humanism. Both call for an ethics of prosperity combined with social justice, and both criticize postmodernism and religious conservatism. The aspiration of this book is to serve as a model for future dialogue between holders of Western and Islamic worldviews, in mutual pursuit of modernity's best-case scenario.
